Energy Efficient Homes For Dummies Rik DeGunther,2008-11-24 Hands-on, practical solutions to save money by making smart energy changes One of the best and most affordable strategies people can employ to combat global warming is to improve the energy and water efficiency of their homes. Energy Efficient Homes For Dummies provides homeowners with advice, tips, and projects to reduce costs, increase energy efficiency, and cut down on waste and pollution. After performing a do-it-yourself home energy audit, readers create an action plan based on their personal goals. Readers are presented with a wide range of potential solutions, from making better use of blinds and awnings to exploring geothermal options in order to reduce household costs and their impact on the planet. Rik DeGunther (Rescue, CA) is the founder of Efficient Homes, an energy consulting firm that focuses on home energy audits and the design of efficient heating and cooling systems.

Holistically Green Homes W. Orlo Stitt,2014-05-05 Most houses being built today are not as energy efficient as they could be. Every builder, if asked, Do you build energy efficient houses? will persuasively answer, Yes. Without studying energy efficient housing in an objective way, most homebuyers will believe the builder's answer. Yet studies and tests prove otherwise. After reading the eighteen clearly defined principles in this book, the reader will have a basis for understanding and comparing the efficiency of one house to another and one builder to another. The eighteen easy-to-implement principles are based on tried and proven solutions for conservation and clean renewable energy generation. Homes that are built to be holistically green are economical and maintain their value. And by saving energy and improving indoor quality, they are environmentally responsible and provide a healthier place to

live. Building an energy-conscious home is smart--a smart financial investment, a smart approach to our energy and environmental challenges, and the right thing to do. The benefits of planning for and building based on the Eighteen Principles in total are greater than the sum of the individual principles. References are made in the text--from principle to principle--that will be helpful in understanding how each one is dependent in some way on the other. Economic and financial considerations are discussed based on examples and case studies. The studies show that, while it does cost more to build a house that is energy efficient, environmentally friendly and responsible, structurally stronger, and resistant to the challenges of time, a well designed, efficient home can be more economical to live in--beginning with the first month that utility bills are received. And it is a better investment because of the higher resale value and reduced maintenance. This book will educate and instill confidence in consumers with regard to their largest personal investment: their home. They will understand what specifics to look for to get an energy efficient, healthy home that will save them money and have a positive impact on energy conservation, energy generation, and climate change.

The ENERGY EFFICIENT HOME Patrick Waterfield,2012-08-01 Reducing energy consumption and costs is an issue of ever-increasing importance, and European and national legislation aimed at reducing carbon emissions is tightening up minimum energy standards for new buildings as well as those being extended or renovated. Energy-saving measures in the home will, therefore, become ever more cost-effective throughout our lifetimes. This book covers every aspect of the efficient consumption of energy in the home including the following and much more: the position of the dwelling, its method of construction and the materials used; energy rating and the legal framework; insulation and U-values; windows and doors; conservatories, sunrooms and loft conversions; heating and hot-water systems; lighting and making the best use of daylight; ventilation; renewable energy technologies; appliances, gadgets and housekeeping; the wider environmental issues including water economy and recycling. This non-technical book is fully revised and updated to take account of recent legislation and developments in energy efficient products and techniques.

Passive Houses Chris van Uffelen,2012 The new generation of ecological architecture building owners today are increasingly confronted with the question of energy efficiency. Depending on the climatic zone, passive houses require very different technologies, interventions and steps to be taken by the architects. This volume portrays 60 single family passive houses.

Green Home Building Miki Cook,Doug Garrett,2014-09-01 A comprehensive guide to building green on any budget. According to conventional wisdom, building a green home is an expensive endeavor. The standard approach treats green as an add-on, tacking premium products, finishes, and equipment onto a traditional home design. As a result, many green home projects end up over budget or fail to achieve their environmental and performance goals. Green Home Building explodes the myth that green homes have to cost more. Using proven methods based on applied building science, the authors show how to: Lower base construction costs to provide funding for high performance upgrades Achieve a net-zero energy home, including zero-ing water, waste, carbon, and associated costs within fifteen years Live affordably into the future, despite anticipated rising costs for fuel, water, materials, taxes, and health care This comprehensive guide to building green on any budget defines the strategies that maximize the return on green investments. Written for anyone who has ever been swayed by the argument that the price tag limits how green a home can be, Green Home Building is a must-read for builders, contractors, architects, designers, and homeowners. Miki Cook is a green building and sustainability consultant who has dedicated her career to educating contractors and the public on the strategies, methods, and benefits of green homes. Doug Garrett has trained thousands of homebuilders, architects, and sub-contractors to build energy-efficient homes using applied building science to improve comfort, durability, and healthfulness while meeting or exceeding the energy code.
