Global Satellite Meteorological Observation (GSMO) Applications Stojče Dimov Ilčev, 2018-12-05 This book presents principal structures of space systems functionality of meteorological networks, media and applications for modern remote sensing, transmission systems, meteorological ground and users segments and transferring weather data from satellite to the ground infrastructures and users. The author presents techniques and different modes of satellite image interpretation, type of satellite imagery, spectral imaging properties, and enhancement of imaging technique, geo-location and calibration, atmospheric and surface phenomena. Several satellite meteorological applications are introduced including common satellite remote sensing applications, weather analysis, warnings and prediction, observation and measurements of meteorological variables, atmosphere and surface applications, ocean and coastal applications, land, agriculture and forestry applications, and maritime and aviation satellite weather applications. The author also covers ground segment and user segment in detail. The final chapter looks to the future, covering possible space integrations in meteorological and weather observation. This is a companion book of *Global Satellite Meteorological Observation Theory* (Springer), which provides the following topics: Evolution of meteorological observations and history satellite meteorology Space segment with satellite orbits and meteorological payloads Analog and digital transmission, type of modulations and broadcasting systems Atmospheric radiation, satellite meteorological parameters and instruments Meteorological antenna systems and propagation

Global Mobile Satellite Communications Stojče Dimov Ilčev, 2005-12-05 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. *Global Mobile Satellite Communications* is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. *Global Mobile Satellite Communications* represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.

Global Satellite Meteorological Observation (GSMO) Theory Stojče Dimov Ilčev, 2017-10-11 This book presents the principal structure of space systems, functionality, media and applications for modern remote sensing, transmission systems, meteorological antennas, propagation meteorological observation and transferring weather data from satellite to the ground infrastructures and users. The book starts with a short background to the development of Radio and Space systems including overview, concepts and applications of satellite communications in function of transfer meteorological observation data and images. It goes on to discuss the fundamental principles of the space platforms and orbital parameters, laws of satellite

motions, new types of launching systems, satellite orbits and geometric relations, spacecraft configuration, payload structure, type of onboard antenna systems, satellite orbits and components of satellite bus. The author also provides comprehensive coverage of baseband and transmission systems, fundamentals of atmospheric electromagnetic radiation, satellite meteorological parameters and instruments, and research and applications in antenna systems and propagation. This is a companion book of *Global Satellite Meteorological Observation Applications* (Springer).

Global Mobile Satellite Communications Theory Stojče Dimov Ilčev, 2016-09-23 This book discusses current theory regarding global mobile satellite communications (GMSC) for maritime, land (road and rail), and aeronautical applications. It covers how these can enable connections between moving objects such as ships, road and rail vehicles and aircrafts on one hand, and on the other ground telecommunications subscribers through the medium of communications satellites, ground earth stations, Terrestrial Telecommunication Networks (TTN), Internet Service Providers (ISP) and other wireless and landline telecommunications providers. This new edition covers new developments and initiatives that have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits and projects of new hybrid satellite constellations. The book presents current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphics, illustrations and mathematics equations. The first edition of *Global Mobile Satellite Communications* (Springer, 2005) was split into two books for the second edition—one on applications and one on theory. This book presents global mobile satellite communications theory.

Radar and Satellite Weather Interpretation for Pilots Terry T. Lankford, 2002 UTILIZE THE LATEST ADVANCES IN SATELLITE AND RADAR IMAGING FOR SMOOTH, SAFE FLIGHT OPERATIONS Recent breakthroughs in radar and satellite imaging and communications technology have put a tremendous amount of potentially life-saving weather-related data at a pilot's disposal. This heavily-illustrated, expertly written resource explains how to obtain, interpret, and effectively apply all this information. *Radar & Satellite Weather Interpretation For Pilots* thoroughly describes the usefulness - as well as limitations - of radar and satellite imaging in flight planning and operations and offers in-depth coverage of key topics such as: * Geographical Features * Weather Features * Interpretation and Application * Maps and Codes * Equipment Reviews * Lightning Detection Equipment * Image Illustrations * Flight Planning Strategies * Risk Evaluation * And more You'll also find reference information and maps to help plot radar locations and lists to decode location identifiers. Although *Radar & Satellite Weather Interpretation for Pilots* includes an in-depth review of satellite and weather radar fundamentals as applied to flight, it is far more than a collection of facts - it is a working tool that teaches pilots solid decision-making and risk assessment skills. The author, who is a former FAA Weather Specialist and a consultant for NASA includes valuable case study examples of misinterpretation and prevention techniques as well as actual weather scenarios used to apply flight planning strategies. If you are looking for clear and up-to-date information on satellite and radar weather interpretations for flight operations, your search ends here.

General Aviation Pilots' Perceived Usage and Valuation of Aviation Weather Information Sources Kara A. Latorella, 2002 Aviation suffers many accidents due to the lack of good weather information in flight. Existing aviation weather information is difficult to obtain when it is most needed and is not well formatted for in-flight use. Because it is generally presented aurally, aviation weather information is difficult to integrate with spatial flight information and retain for reference. Efforts, by NASA's Aviation Weather Information (AWIN) team and others, to improve weather information accessibility, usability and decision aiding will enhance General Aviation (GA) pilots' weather situation awareness and decision-making and therefore should improve the safety of GA flight. Consideration of pilots' economic concerns will ensure that in-flight weather information systems are financially accessible to GA pilots as well. The purpose of this survey was to describe how aviation operator communities gather and use weather information as well as how weather related decision.

Over the last few years, FAA and NWS have been exploring options for enhancing the efficiency of the aviation weather services provided at en route centers.
