Global Urban Monitoring and Assessment through Earth Observation Qihao Weng,2014-05-23 Cities and towns are the original producers of many of the global environmental problems related to waste disposal, and air and water pollution. There is a rapidly growing need for technologies that will enable monitoring of the world's natural resources and urban assets, and managing exposure to natural and man-made risks. The Group on Earth Observation (GEO) calls for strengthening the cooperation and coordination among global observing systems and research programs. Global Urban Monitoring and Assessment through Earth Observation introduces this important international collaborative effort, reviews the current state of global urban remote sensing, and expands on future directions in the field. The book reviews the current state of global urban monitoring, assessment, modeling, and prediction through Earth observation and related technologies. It then introduces GEO's important international collaborative effort—Global Urban Observation and Information Task—and the current state of global urban remote sensing and future directions. It explores groundbreaking work in urban remote sensing and examines how it could contribute to the development of innovative concepts and techniques for sustainable urban development. Despite significant progress in recent years, there remain substantial gaps in ongoing national, regional, and global efforts to address environmental challenges. Edited by a well-known expert in the field of remote sensing, GIS, and other geospatial technologies, this book addresses the gaps in an effective and long-term manner, highlighting the importance of increased coordination and networking among major stakeholders and of working together with other key international mechanisms. Drawing on the expertise of pioneers in the

field from across the globe, the book details emerging research in the theory, methods, and techniques of urban remote sensing that provide insight into how to solve the major issues of sustainable development—one of the most important issues facing society in the future.

U.S. Approaches to Global Security Challenges Kristen Boon,Douglas Lovelace,Aziz Z. Huq,2012 Terrorism: Commentary on Security Documents is a series that provides primary source documents and expert commentary on the worldwide counter-terrorism effort. Among the documents collected are transcripts of Congressional testimony, reports by such federal government bodies as the Congressional Research Service (CRS) and the Government Accountability Office (GAO), and case law covering issues related to terrorism. Most volumes carry a single theme, and inside each volume the documents appear within topic-based categories. The series also includes a subject index and other indices that guide the user through this complex area of the law. Volume 124, U.S. Approaches to Global Security Challenges, analyzes U.S. strategy toward security threats across the globe and identifies the beginnings of a shift away from a reliance on military power to the application of various types of civilian power which utilize a multinational approach. The documents introduced by Douglas Lovelace include U.S. perspectives on the international security situation generally as well as reports on more specific topics, such as the security situation in Afghanistan, terrorism in East Africa, the evolving role of NATO, and cooperation between the U.S. and other governments (such as the EU and China) in the fight against terrorism.

Micro-Spatial Histories of Global Labour Christian G. De Vito,Anne Gerritsen,2017-09-28 This volume suggests a new way of doing global history. Instead of offering a sweeping and generalizing overview of the past, we propose a 'micro-spatial' approach, combining micro-history with the concept of space. A focus on primary sources and awareness of the historical discontinuities and unevennesses characterizes the global history that emerges here. We use labour as our lens in this volume. The resulting micro-spatial history of labour addresses the management and recruitment of labour, its voluntary and coerced spatial mobility, its political perception and representation and the workers' own agency and social networks. The individual chapters are written by contributors whose expertise covers the late medieval Eastern Mediterranean to present-day Sierra Leone, through early modern China and Italy, eighteenth-century Cuba and the Malvinas/Falklands, the journeys of a missionary between India and Brazil and those of Christian captives across the Ottoman empire and Spain. The result is a highly readable volume that addresses key theoretical and methodological questions in historiography. Chapter 7

Culture in Global Businesses Bharat S. Thakkar,2020-12-21 This book offers research geared toward understanding culture and its influence on the success of global businesses. Divided into two parts that look at the leveraging culture cultural diversity from an organizational as well as national perspective, the chapters investigate the effects of technology on culture, the role of leadership in corporate culture, and communicating and managing change across cultures. With contributions from authors from academic as well as professional backgrounds, this book will serve as a valuable resource to researchers interested in cultural studies generally as well as those studying the importance of culture to managing modern organizations.

Warm-Temperate Deciduous Forests around the Northern Hemisphere Elgene O. Box,Kazue Fujiwara,2014-12-29 Warm-temperate deciduous forests are southern, mainly oak-dominated deciduous forests, as found over the warmer southern parts of the temperate deciduous forest regions of East Asia, Europe and eastern North America. Climatic analysis has shown that these forests extend from typical temperate climates to well into the warm-temperate zone, in areas where winters are a bit too cold for the 'zonal' evergreen broad-leaved forests normally expected in that climatic zone. This book is the first to recognize and describe these southern deciduous forests as an alternative to the evergreen forests of the warm-temperate zone. This warm-temperate zone will become more important under global warming, since it

represents the contested transition between deciduous and evergreen forests and between tropical and temperate floristic elements. This book is dedicated to the memory of Tatsuō Kira, the imaginative Japanese ecologist who first noticed and described this general zonation exception and who proposed the name warm-temperate deciduous forest.

Analysis of Infectious Disease Problems (Covid-19) and Their Global Impact Praveen Agarwal,Juan J. Nieto,Michael Ruzhansky,Delfim F. M. Torres,2021 This edited volume is a collection of selected research articles discussing the analysis of infectious diseases by using mathematical modelling in recent times. Divided into two parts, the book gives a general and country-wise analysis of Covid-19. Analytical and numerical techniques for virus models are presented along with the application of mathematical modelling in the analysis of their spreading rates and treatments. The book also includes applications of fractional differential equations as well as ordinary, partial and integrodifferential equations with optimization methods. Probability distribution and their bio-mathematical applications have also been studied. This book is a valuable resource for researchers, scholars, biomathematicians and medical experts.

Earth Observation of Global Change Emilio Chuvieco,2007-10-28 Global Change is increasingly considered a critical topic in environmental research. Remote sensing methods provide a useful tool to monitor global variables, since they provide a systematic coverage of the Earth's surface, at different spatial, spectral and temporal resolutions. This book offers an analysis of the leading missions in global Earth observation, and reviews the main fields in which remote sensing methods are providing vital data for global change studies.

World Television Joseph D. Straubhaar,2007-05-18 World Television: From Global to Local, a new assessment of the interdependence of television across cultures and nations brings together the most current research and

theories on the subject. By examining recent developments in the world system of television as well as several theories of culture, industry, genre, and audience, author Joseph D. Straubhaar offers new insights into the topic. He argues that television is being simultaneously globalized, regionalized, nationalized, and even localized, with audiences engaging it at multiple levels of identity and interest; therefore the book looks at all these levels of operation. Key Features Draws upon both international communication and cultural studies perspectives: Presents a new model is presented that attempts to move beyond the current controversies about imperialism and globalization. Looks at historical patterns: Historical patterns across cultures and countries help compare where television has been and where it is going. Takes a contemporary focus: Uses of technology, flows and patterns of program development, genres of television, the interaction of producers and audiences, and patterns of audience choice among emerging alternatives are examined. Explores how the audience for these evolving forms of television is structured: The effects of these forces or patterns of television have on both cultural formations and individual identities are identified. Intended Audience This is an excellent text for advanced undergraduate and graduate courses in Globalizatiion and Culture, Global Media, Television Studies, Television Criticism, and International Media.

Computational Modeling and Problem Solving in the Networked World Hemant K. Bhargava,Nong Ye,2002-12-31 This book is a compilation of a selected subset of research articles presented at the Eighth INFORMS Computing Society Conference, held in Chandler, Arizona, from January 8 to 10, 2003. The articles in this book represent the diversity and depth of the

interface between ORiMS (operations research and the management sciences) and CS/AI (computer science and artificial intelligence). This volume starts with two papers that represent the reflective and integrative thinking that is critical to any scientific discipline. These two articles present philosophical perspectives on computation, covering a variety of traditional and newer methods for modeling, solving, and explaining mathematical models. The next set includes articles that study machine learning and computational heuristics, and is followed by articles that address issues in performance testing of solution algorithms and heuristics. These two sets of papers demonstrate the richness of thought that takes place at the ORiMS and CSI AI interface. The final set of articles demonstrates the usefulness of these and other methods at the interface towards solving problems in the real world, covering e-commerce, workflow, electronic negotiation, music, parallel computation, and telecommunications. The articles in this collection represent the results of cross-fertilization between ORiMS and CSI AI, making possible advances that could have not been achieved in isolation. The continuing aim ofthe INFORMS Computing Society and this research conference is to invigorate and further develop this interface.

Advances in Global Optimization David Gao,Ning Ruan,Wenxun Xing,2014-11-11 This proceedings volume addresses advances in global optimization—a multidisciplinary research field that deals with the analysis, characterization and computation of global minima and/or maxima of nonlinear, non-convex and nonsmooth functions in continuous or discrete forms.
