Rhetoric in financial discourse Belinda Crawford Camiciottoli,2013-11-10 Financial disclosure has become a crucial component of corporate communication. Through this process, companies aim to provide information and project an image of trustworthiness in response to on-going ethical concerns in the world of finance. Rhetoric in financial discourse provides new insights into how companies communicate with key stakeholders, not only to boost transparency, but also to attract investment. The book offers an in-depth linguistic analysis of the rhetorical dimension of financial communication. It focuses on two technology-mediated genres which are widely used, yet remain largely unexplored from a rhetorical perspective: earnings presentations and earnings releases. Using an innovative methodological approach, the book shows how corporate speakers and writers use distinctive rhetorical strategies to achieve their professional goals. It includes a practical discussion of how the findings can be exploited to develop state-of-the-art corporate communication courses and to improve the

effectiveness of financial disclosure in professional settings. The book contributes to an enhanced understanding of the language of finance, representing a discourse community that involves and impacts the lives of many people around the world. It will be of interest to several communities of practice, including language researchers, discourse analysts, corpus linguists, finance and communication academics, students of business and finance, and professionals of financial communication. Belinda Crawford Camiciottoli is Associate Professor of English Language and Linguistics at the University of Pisa. Her research focuses on business discourse in both academic and corporate settings. She has published in leading journals, including *Discourse & Communication*, *Business Communication Quarterly* and *English for Specific Purposes*. She is the author of *The Language of Business Studies Lectures* (2007). She has taught business and organizational communication courses for universities based in Italy, the US and the UAE.

Tools and Algorithms for the Construction and Analysis of Systems Bernhard Steffen, 1998-03-18 ETAPS'99 is the second instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprises five conferences (FOSSACS, FASE, ESOP, CC, TACAS), four satellite workshops (CMCS, AS, WAGA, CoFI), seven invited lectures, two invited tutorials, and six contributed tutorials. The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis and improvement. The languages, methodologies and tools which support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on one hand and soundly-based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

High-fidelity Multichannel Audio Coding Dai Tracy Yang, Chris Kyriakakis, Chung-Chieh Jay Kuo, 2005 This invaluable monograph addresses the specific needs of audio-engineering students and researchers who are either learning about the topic or using it as a reference book on multichannel audio compression. This book covers a wide range of knowledge on perceptual audio coding, from basic digital signal processing and data compression techniques to advanced audio coding standards and innovative coding tools. It is the only book available on the market that solely focuses on the principles of high-quality audio codec design for multichannel sound sources. This book includes three parts. The first part covers the basic topics on audio compression, such as quantization, entropy coding, psychoacoustic model, and sound quality assessment. The second part of the book highlights the current most prevalent low-bit-rate high-performance audio coding standards-MPEG-4 audio. More space is given to the audio standards that are capable of supporting multichannel signals, that is, MPEG advanced audio coding (AAC), including the original MPEG-2 AAC technology, additional MPEG-4 toolsets, and the most recent AAC-Plus standard. The third part of this book introduces several innovative multichannel audio coding tools, which have been demonstrated to further improve the coding performance and expand the available functionalities of MPEG AAC, and is more suitable for graduate students and researchers in the advanced level. Dai Tracy Yang is currently Postdoctoral Research Fellow, Chris Kyriakakis is Associated Professor, and C.-C. Jay Kuo is Professor, all affiliated with the Integrated Media Systems Center (IMSC) at the University of Southern California.

Advanced Nanoscale ULSI Interconnects: Fundamentals and Applications Yosi Shacham-Diamand, Tetsuya Osaka, Madhav Datta, Takayuki Ohba, 2009-09-19 In Advanced ULSI interconnects – fundamentals and applications we bring a comprehensive description of copper-based interconnect technology for ultra-large-scale integration (ULSI) technology for integrated circuit (IC) application. Integrated circuit technology is the base for all modern electronics systems. You can find electronics systems today everywhere: from toys and home appliances to airplanes and space shuttles. Electronics systems form the hardware that together with software are the bases of the modern information society. The rapid growth and vast exploitation of modern electronics system create a strong demand for new and improved electronic circuits as demonstrated by the amazing progress in the field of ULSI technology. This progress is well described by the famous “Moore’s law” which states, in its most general form, that all the metrics that describe integrated circuit performance (e. g. , speed, number of devices, chip area) improve exponentially as a function of time. For example, the number of components per chip doubles every 18 months and the critical dimension on a chip has shrunk by 50% every 2 years on average in the last 30 years. This rapid growth in integrated circuits technology results in highly complex integrated circuits with an increasing number of interconnects on chips and between the chip and its package. The complexity of the interconnect network on chips involves an increasing number of metal lines per interconnect level, more interconnect levels, and at the same time a reduction in the interconnect line critical dimensions.

International Handbook of Metacognition and Learning Technologies Roger Azevedo,Vincent Aleven,2013-04-23 Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area.Rich in theoretical models and empirical data, the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in multimedia, hypermedia, microworlds, and other platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning.Identifies features designed to study or support metacognitive/SRL behaviors.Reviews how its specific theory or model addresses learners' metacognitive/SRL processes.Provides detailed findings on its effectiveness toward learning.Discusses its implications for the design of metacognitive tools.Examines any theoretical, instructional, or other challenges.These leading-edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.
