Masters of Corporate Venture Capital Andrew Romans,2016-08-18 Andrew Romans captured wisdom from interviews with 100+ Corporate Venture Capitalists (CVCs), independent VCs, CEOs of startups, bankers and lawyers to write the definitive book on the topic of CVC. Masters of Corporate Venture Capital is packed with invaluable advice about how to best raise capital from CVCs, unlock synergies of partnering startups with large corporations for rapid international growth and avoid potential disasters and other dangers related to CVC. More than 20% of all Venture Capital financings include at least one CVC and thus startups need to understand this previously misunderstood area of funding. Corporations need to establish their own CVC arms to access external innovation and learn how to bring this inside via VC investing, partnerships and M&A. We work in a very complex ecosystem and this book captures stories that bring the complexity to life with simple lessons. This book is for: \* Entrepreneurs \* VCs \* Angel investors \* Family offices \* CVCs \* Corporates thinking about launching a CVC \* Anyone advising startups.

**The Whys of Subnuclear Physics** Antonio L. Zichichi,2012-12-06 From 23 July to 10 August 1977 a group of 125 physicists from 72 laboratories of

20 countries met in Erice to attend the 15th Course of the International School of Subnuclear Physics. The countries represented at the School were: Belgium, Bulgaria, Denmark, Federal Republic of Germany, Finland, France, Hungary, Ireland, Israel, Italy, Japan, the Netherlands, Norway, Poland, Sweden, Switzerland, the United Kingdom, the United States of America and Venezuela. The School was sponsored by the Italian Ministry of Public Education (MPI), the Italian Ministry of Scientific and Technological Research (MRST), the North Atlantic Treaty Organization (NATO), the Regional Sicilian Government (ERS) and the Heizmann Institute of Science. The School was very exciting due to the impressive number of frontier problems which were discussed. Being the 15th year of the School, it was decided to review all outstanding Phys. At various stages of my work I have enjoyed the collaboration of many friends whose contributions have been extremely important for the School and are highly appreciated. I would like to thank Dr. A. Gabriele, Ms. S. McGarry, Mr. and Mrs. S. Newman, Ms. P. Savalli and Ms. M. Zaini for the general scientific and administrative work. Finally, I would like to thank most warmly all those in Erice, Bologna and Geneva who helped me on so many occasions and to whom I feel very much indebted.

**Portuguese Humanism and the Republic of Letters**  
Maria Berbara, Karl A. E. Enenkel, 2011-12-23 This volume focuses on the interdisciplinary investigation of Portuguese humanism, especially as a noteworthy player in the international network of early modern scholarship, literature

and visual arts.

**Virgil in the Renaissance** David Scott Wilson-Okamura, 2010-08-12 The disciplines of classical scholarship were established in their modern form between 1300 and 1600, and Virgil was a test case for many of them. This book is concerned with what became of Virgil in this period, how he was understood, and how his poems were recycled. What did readers assume about Virgil in the long decades between Dante and Sidney, Petrarch and Spenser, Boccaccio and Ariosto? Which commentators had the most influence? What story, if any, was Virgil's Eclogues supposed to tell? What was the status of his Georgics? Which parts of his epic attracted the most imitators? Building on specialized scholarship of the last hundred years, this book provides a panoramic synthesis of what scholars and poets from across Europe believed they could know about Virgil's life and poetry.

Nonperturbative Topological Phenomena in QCD and Related Theories Edward Shuryak, 2021-03-25 This book introduces a variety of aspects in nonperturbative Quantum Chromodynamics (QCD), focusing on the topological objects present in gauge theories. These objects, like magnetic monopoles, instantons, instanton-dyons, sphalerons, QCD flux tubes, etc, are first introduced individually and, later, treated collectively. As ensembles, they produce various phenomena that can be modeled numerically in lattice gauge theories and such collective effects, produced on the lattice, are extensively discussed in some chapters. In turn, the notion of

duality, which is crucial in modern field/string theories, is elucidated by taking into consideration the electric-magnetic duality, the Poisson duality, and the AdS/CFT duality. This monograph is based on various lectures given by Edward Shuryak at Stony Brook during the last three decades and it is meant for advanced graduate students and young researchers in theoretical and mathematical physics who are willing to consolidate their knowledge in the topological phenomena encountered in fundamental QCD research.

**Manuscripts and Methods** Michael D. Reeve, 2011  
Vengono qui raccolti gli studi di uno dei massimi esperti viventi di letteratura greca e latina. I saggi sono sistemati in ordine stemmatico, dagli autografi alle edizioni a stampa. Dopo la pubblicazione del suo fondamentale volume del 1983, *Texts and Transmission*, e dei suoi saggi sulla trasmissione dei testi latini, l'autore ritorna su questioni di metodo della tradizione manoscritta, confrontandosi con il dibattito ecdotico aperto nel corso degli anni da filologi come Maas e Pasquali, Timpanaro e Kenney. Reeve quindi ritorna su questioni testuali, dopo una riflessione di trenta anni dedicata a problemi che si confrontano da una parte con le tradizioni testuali dei singoli testi, dall'altra con questioni generali di metodo. Massimo esperto di testi conservati interamente o in massima parte in manoscritti del Rinascimento italiano, scrupolosamente collazionati, le sue ricerche hanno spesso portato alla risoluzione di loci critici.

*Future High Energy Colliders* Zohreh Parsa, 1997  
Annotation The 21 papers offer personal perspectives by theoretical, experimental, and accelerator physicists on the physics objectives and technological demands of future colliders. They include a historical perspective of Higgs physics, strongly interacting new physics, precision physics at LHC, the TESLA superconducting linear collider, linear electron-electron colliders, and scaling linear colliders to 5 TeV and above. No subject index. Annotation c. by Book News, Inc., Portland, Or.

*Quarks And Colliders - Proceedings Of The Tenth Lake Louise Winter Institute* Alan Astbury, Bruce A Campbell, Faqir C Khanna, James L Pinfold, 1996-08-22  
The book originated in a series of lectures given at Liverpool in 2013 to a group that included postgraduate and undergraduate students and staff of the Physics Department. They followed from two very successful lectures given to the undergraduate Physical Society. It seemed that there was a very large interest among the students in investigating the foundations of physics in a way that was never done in physics courses, and was not available in books or other outlets. However, the idea was to create a framework in which students (and interested staff) could develop their own thinking relative to the ideas in the lectures. So it was important to create both conceptual and mathematical structures on the issues that are important at this level. The book has the right sort of technical content to allow for this development, but doesn't lose itself in excessive details. The ideal use for this book

would be on postgraduate courses where students would be encouraged to think about the foundations in a way that is well beyond the superficial. However, a course on aspects of this material would also be valuable at the undergraduate level, where students could be stimulated into believing that creative thinking could solve the problems that emerge when we confront foundational problems.
