*Spectacular Flops* Michael Brian Schiffer,2018-12-31 Many technologies begin life as someone's vision of an ambitious, perhaps audacious, technology that is expected to have a revolutionary impact on consumers-whether families, companies, or societies. However, if this highly touted technology fails prematurely at some point in its life history, it becomes a spectacular flop. Employing a behavioral perspective, this book presents a sample of twelve spectacular flops encompassing the past three centuries-ranging from the world's first automobile to the nuclear-powered bomber. Because technologies may fail from many different causes, spectacular flops pose a special challenge to the author's long-term project of furnishing generalizations about technological change. Instead of constructing generalizations that apply to all spectacular flops, this book provides limited generalizations that pertain to particular groups of technologies bounded by parameters such as long-term development projects and one-off projects. The reader need have no prior familiarity with the technologies because basic principles are introduced as needed.

*Alfa Romeo 155/156/147 Competition Touring Cars* Peter Collins,2012-09-03 After saving Alfa Romeo from oblivion in 1987, it took Fiat nearly five years to debut the first new Alfa produced under its control. This is the story of how the competition versions of the 155/156/147 family of cars were developed and subsequently raced to many championship titles and race wins. Together, these models kept the Alfa Romeo name at the pinnacle of motor sport for many years, from 1992 to 2006, and will become future motorsport classics.

*Austin Allegro* Ben Wanklyn,2014-02-28 The stylist of the Austin Allegro, Harris Mann, said of the car that 'It took a lot of stick, but it wasn't that bad a car ... The trouble was that every one off the line was different in some way, thanks to quality control.' As a result, few have bothered to explore the little Austin's background; what it was designed to achieve, how it became the way it was, and what happened to make it so infamous. Austin Allegro - An Enthusiast's Guide redresses the balance, telling the Allegro's tale of grand designs, high hopes, management compromises, failed dreams, industrial unrest, national ridicule and finally, redemption. Now experiencing something of a comeback as a cheap and cheerful classic, the book provides ownership advice and buying information for all models. From the quietly competent series 2 models through to the sportily-styled and now very rare Equipe, the book re-evaluates the place of the Allegro in the classic car world and concludes that it is both a simple, economical classic choice, and an important part of British motoring history. Illustrated throughout with 170 colour photographs.

*Toyota MR2* Nigel Burton,2015-04-30 Toyota MR2 details the full start-to-finish history of Toyota's bestselling mid-engined sports car, from 1984 until 2007, when production ended. With detailed specification guides, archive photos and beautiful new photography, this book is a must for every MR2 owner and sports car enthusiast. Covers the background to the MR2 - the 1973 oil crisis and Akio Yoshida's designs; suspension improvements to the Mk II, significantly improving handling; the MR2 in motorsport; special editions and Zagato's VM180. This complete history of Toyota MR2 includes detailed specifications guides and is beautifully illustrated with 260 colour and 36 black & white archive photographs.

*Lightweight and Sustainable Materials for Automotive Applications* Omar Faruk,Jimi Tjong,Mohini Sain,2017-06-01 Automotive manufacturers are required to decrease CO2 emissions and increase fuel economy while assuring driver comfort and safety. In recent years, there has been rapid development in the application of lightweight and sustainable materials in the automotive industry to help meet these criteria. This book provides critical reviews and the latest research results of various lightweight and sustainable materials in automotive applications. It discusses current applications and future trends of lightweight materials in the automotive area. While there are a few books published mainly focusing on automotive applications of metallic lightweight materials, to date there is no available book focusing on a broad spectrum of lightweight materials, including metal, plastic, composites, bio-fiber, bio-polymer, carbon fiber, glass fiber, nanomaterials, rubber materials, and foaming materials, as this work does. The book also includes case studies of commercial lightweight automotive parts from sustainable lightweight materials, providing an invaluable resource to those involved in this in-demand research and commercialization area.
