Eureka William Diehl, 2002-02-19 Eureka. It's what you say when you strike gold. It's also a town in California where the truth might be buried forever. In New York Times bestselling author William Diehl's thrilling, accomplished new novel, the seamy past of America's most glamorous state lies in this deceptively peaceful area, one hundred miles north of Los Angeles. It was the lawless place from which young, rugged Thomas Culhane escaped to fight World War I. Now it's a place where, two decades later, police detective Zeke Bannon investigates a death that seems a sad accident. Until you look a bit closer. The year is 1941. Verna Wilensky has been electrocuted in her bathtub, leaving a lower-middle-class life, no survivors, and a bank account packed with almost a hundred thousand dollars. Mysterious checks have consistently come to her for more than twenty years, most drawn from a bank in San Pietro, a town once known as Eureka. Eureka was a town that used to be a bootlegger's paradise and a gangster's dream. Now it is the rebuilt metropolis where Sheriff Thomas Culhane is launching a bid to be the golden state's next governor. But something just might threaten his ambitions. As Bannon digs deeper into Wilensky's demise, he unearths a decades-old secret that starts in a shootout, builds to a bloodbath, and could end up within the upper echelons of California's elite, forever changing the destiny of a state. Rich in historical detail, complex in its connection between past and present, and filled with the nonstop action that are the hallmarks of this modern master, *Eureka* is an epic achievement of storytelling and suspense—William Diehl's most extraordinary novel yet.

**The Eureka Factor** John Kounios, Mark Beeman, 2015-04-14 In a book perfect for readers of Charles Duhigg's *The Power of Habit*, David Eagleman's *Incognito*, and Leonard Mlodinow's *Subliminal*, the cognitive neuroscientists who discovered how the brain has aha moments—sudden creative insights—explain how they happen, when we need them, and how we can have more of them to enrich our lives and empower personal and professional success. Eureka or aha moments are sudden realizations that expand our understanding of the world and ourselves, conferring both personal growth and practical advantage. Such creative insights, as psychological scientists call them, were what conveyed an important discovery in the science of genetics to Nobel laureate Barbara McClintock, the melody of a Beatles ballad to Paul McCartney, and an understanding of the cause of human suffering to the Buddha. But these moments of clarity are not given only to the famous. Anyone can have them. In *The Eureka Factor*, John Kounios and Mark Beeman explain how insights arise and what the scientific research says about stimulating more of them. They discuss how various conditions affect the likelihood of your having an insight, when insight is helpful and when deliberate methodical thought is better suited to a task, what the relationship is between insight and intuition, and how the brain's right hemisphere contributes to creative thought. Written in a lively, engaging style, this book goes beyond scientific principles to offer productive techniques for realizing your creative potential—at home and at work. The authors provide compelling anecdotes to illustrate how eureka experiences can be a key factor in your life. Attend a dinner party with Christopher Columbus to learn why we need insights. Go to a baseball game with the director of a classic Disney Pixar movie to learn about one important type of aha moment. Observe the behind-the-scenes arrangements for an Elvis Presley concert to learn why the timing of insights is crucial. Accessible and compelling, *The Eureka Factor* is a fascinating look at the human brain and its seemingly infinite capacity to surprise us. Praise for *The Eureka Factor* “Delicious . . . In *The Eureka Factor*, neuroscientists John Kounios and Mark Beeman give many other examples of [a] kind of lightning bolt of insight, but back this up with the latest brain-imaging research.”—*Newsweek* “An incredible accomplishment . . . [*The Eureka Factor*] is not just a chronicle of the journey that numerous scientists (including the authors) have taken to

examine insight but is also a fascinating guide to how advances in science are made in general. Messrs. Kounios and Beeman examine how a parade of clever experiments can be designed to answer specific questions and rule out alternative possibilities. . . . Wonderful ideas appear as if out of nowhere—and we are delighted.”—The Wall Street Journal “An excellent title for those interested in neuroscience or creativity . . . The writing is engaging and readable, mixing stories of famous perceptions with explanations of how such revelations happen.”—Library Journal (starred review) “A lively and accessible ‘brain’ book with wide appeal.”—Booklist “[An] ingenious, thoughtful update on how the mind works.”—Kirkus Reviews “The Eureka Factor presents a fascinating and illuminating account of the creative process and how to foster it.”—James J. Heckman, Nobel laureate in economics

Eureka Chad Orzel, 2014-12-09 When it comes to science, too often people say I just don't have the brains for it -- and leave it at that. Why is science so intimidating, and why do people let themselves feel this way? What makes one person a scientist and another disinclined even to learn how to read graphs? The idea that scientists are people who wear lab coats and are somehow smarter than the rest of us is a common, yet dangerous, misconception that puts science on an intimidating pedestal. How did science become so divorced from everyday experience? In *Eureka*, science popularizer Chad Orzel argues that even the people who are most forthright about hating science are doing science, often without even knowing it. Orzel shows that science is central to the human experience: every human can think like a scientist, and regularly does so in the course of everyday activities. The common misconception is that science is a body of (boring, abstract, often mathematical) facts. In truth, science is a process: Looking at the world, Thinking about what makes it work, Testing your mental model by comparing it to reality, and Telling others about your results -- all things that people do daily. By revealing the connection between the everyday activities that people do -- solving crossword puzzles, playing sports, or even watching mystery shows on television -- and the processes used to make great scientific discoveries, *Eureka* shows that this process is one everybody uses regularly, and something that anyone can do.

**Between Literature and Science** Peter Swirski,2000 Through close analysis of Eureka and The Purloined Letter, Swirski evaluates Poe's epistemological theses in the light of contemporary philosophy of science and presents literary interpretation as a cooperative game played by the author and reader, thereby illuminating how we read fiction. The analysis of Poe's little-studied Eureka provides the basis for his discussion of Lem's critique of scientific reductionism and futurological forecasts. Drawing on his own interviews with Lem as well as analysis of his works, Swirski considers the author's scenarios involving computers capable of creative acts and discusses their socio-cultural implications. His analysis leads to bold arguments about the nature of literature and its relation to a broad range of other disciplines.

Manufacturing in Europe is under great pressure from structural changes in the global economy. The high technical, social and cultural standards in Europe mean that our manufacturing enterprises lead the world but inevitably production and consumption continues to migrate to regions that allow higher profitability from lower costs of production with the promise of new markets. Structural changes in European industries will influence employment and welfare. However, there are signs of a new High-Adding-Value industrial revolution. This book has the answers that will allow us to avoid the negative consequences of this migration. A new model of future manufacturing – ManuFuture - has been forged in discussion with the world's leading scientists in manufacturing and many experts from research, industry and economic policy. The results of this, the road to competitive and sustainable manufacturing, are captured in this fundamental book. The generic Model of ManuFuture, a Vision 2020 and a Strategic Research Agenda and the proactive initiatives required are presented here. *High-Tech Europe* Wayne Sandholtz,Associate Professor of Political Science Wayne Sandholtz,1992-01-01 A study of cooperative efforts in the high-tech industries of Europe. Sandholtz examines why collaboration came late to these countries, how protective walls came down, how countries work together in economically sensitive areas. Governments have recognized for decades the dynamic role

played by microelectronics, computers, and telecommunications in the modern economy. Although Europe's deficiencies in these crucial sectors had long been acknowledged, it was not until the 1980s that European nations began collaborating to develop and promote high-tech industries. Their collaboration gives rise to many questions. Why, for example, did the joint efforts come at such a late date rather than in the 1960s or 70s? And how is it possible that they work together in economically sensitive areas? These questions point to fundamental issues in the areas of international cooperation, international institutions, and technology policy. Before the institution of the collaborative programs ESPRIT (European Strategic Programme for Research and Development in Information Technology), RACE (R & D in Advanced Communications-technologies in Europe), and EUREKA (European Research Coordination Agency) in the 1980s, each European country sought its own technological renaissance through protection of national firms behind walls of technical standards, procurement preferences, and research subsidies. Here is a thorough, carefully researched work that examines the breakdown of these walls. It will appeal to political scientists, economists, and scholars of technology and Western Europe interested in the political contours of the high-tech landscape.
