Truck parking areas ,2000

Low Cost Strategies for Short Term Parking on Interstate Highways of the MVFC ,2009 This report documents a study of truck parking issues along the major freight corridors in the 10-state MVFC region. An online GIS instrument was developed to administer surveys and allow for continuous public participation. The study surveyed highway patrol officers, public freight planners and truckers to identify parking facilities incommensurate with truck parking needs. It proposes a method to cluster marked spots for identifying areas with the most need for additional truck parking capacity. In-person carrier interviews were also conducted to further clarify truck parking problem causes and solutions. A set of low cost strategies are finally proposed to policy makers. This study also inventories both public and private parking facilities along the region's freight corridors and provides a review of previous studies--Technical report documentation page.

Automated Low-cost and Real-time Truck Parking Information Systems Ali Ebadollahzadeh Haghani, University of Maryland, College Park, 2013 In this project an automated real-time parking information system was developed to improve truck-parking safety through the efficient gathering and disseminating of information regarding the use of existing parking capacity. The system consists of four main components: sensing, data collection, data processing and user interface (UI). A pilot deployment was conducted on a Maryland State Highway Administration truck parking facility located on Interstate-95 northbound prior to Maryland Route 32.

Autonomous and Integrated Parking and Transportation Services Amalendu Chatterjee, 2019-11-08 In this book, the author outlines a Robust Web Parking, Truck and Transportation Portal (RWPTTP) for integrating parking and transportation services – a revolutionary approach in contrast to incremental change for managing traffic congestion. Autonomous vehicle technology, artificial intelligence, internet of things (IOT), and other interconnected hardware and software tools will assist autonomous parking and transportation services and provide next-century infrastructure for consolidated

transportation customer services. The book highlights currently available autonomous parking and transportation technologies, and the development of an integrated and intelligent transportation service/system (IITS) platform, with specific use of technologies to reconfigure the transportation industry. The author also suggests many regulatory and policy changes to simplify data collection, traffic operation, introduction of a duplicate transportation system using light rail (LRs) and high speed rail (SPRs), and redistribution of parking spaces along such routes, using renewable energy.

Organised Crime and Vulnerability of Economic Sectors Tom Beken, 2005 The influence of organised crime on business activities, enterprises and economic sectors is a matter of concern for many policy makers across the world. As a profit driven criminal activity, organised crime operates in an environment which is not limited to the underworld economy alone. Assessments of the threat posed by organised crime and strategic (preventive) actions to tackle this phenomenon require an understanding of the vulnerable spots in the legal economy that are or might be exploited by crime. This book proposes a new methodology to scan economic sectors on their vulnerability to organised crime and provides vulnerability profiles of the transport and the music sector in Europe to which the method has been tested in a case-study. The developed methodological tool and the vulnerability profiles of both sectors are intended as a guide for actions and initiatives to be taken by governments, law enforcement bodies or economic sectors.

Traveling through Video Games Tom van Nuenen, 2023-10-25 This book unlocks an understanding of video games as virtual travel. It explains how video game design increasingly takes cues from the promotional language of tourism, and how this connection raises issues of power and commodification. Bridging the disciplinary gap between game and tourism studies, the book offers a comprehensive account of touristic gazing in games such as *The Legend of Zelda: Breath of the Wild*, *Minecraft*, and *Microsoft Flight Simulator 2020*. Traveling through video games involves a mythological promise of open-ended opportunity, summarized in the slogan you can go there. Van Nuenen discusses the scale of game worlds, the elusive nature of freedom and control, and the pivotal role of work in creating a sense of belonging. The logic of tourism is fundamentally consumptive—but through design choices, players can also be invited to approach their travels more critically. This is the difference between moving through a game world, and being moved by it. This interdisciplinary and innovative study will interest students and scholars of digital media studies, game studies, tourism and technology, and the Digital Humanities.

Essentials of Logistics and Management, Third Edition Corynne Jaffeux, Philippe Wieser, 2012-12-11 The logistician plays a critical role in the growth of his or her company - in this third edition of *Essentials of Logistics*, the conceptual framework in which all the stakes and themes of logistics is systematically analyzed, with a strong focus on the role of the supply chain. Indeed, many elements are critical to the successful logistical strategy: customer relation management, interactive information support, production optimization

and process development, vision, strategy and operations management, and human resources and resource allocation. Growing out of a successful course given by the International Institute for the Management of Logistics (IML) of the Swiss Federal Institute of Technology (EPFL), in Lausanne, and by the Ecole des Ponts-ParisTech (ENPC), the purpose of this book is to present a methodology allowing the reader to understand and act based on the critical factors embedded in the design of strategy. Concepts are thus combined with practical examples. Transversal vision and detailed case studies highlight the main themes of modern logistics and daily preoccupations of logisticians. The book is addressed to all professionals of logistics: managers, planners and engineers; as well as to graduate students specializing in the field.

The Abc'S of Education: Euro-American Style Suzanne Zurilgen Strauss,2012-08-22 Embarking on yet another journey, Suzanne writes about her experiences and tries to make some sense of this confusion we call American education. With a European perspective, she will develop the best of both worlds, by outlining the best of both educational systems. To balance this rather serious subject, she will insert poetry to lighten the way to a different paradigm shift. What programs are better, how are they instituted, and where can they be rearranged to enhance the educational experience? That part of the study will presently unfold.
