The realisation of offshore wind park projects in Germany - political environment, legal framework and bankability implications Steffen Blomberg, 2014-02-01 According to the German government's new energy concept that was recently introduced, renewable energies shall replace fossil and nuclear energy sources step-by-step. The offshore wind energy sector plays a key role in this new energy strategy, and shall contribute the major share of renewable energy to the future German energy mix. The purpose of this study is to examine and evaluate the applicable conditions that have to be considered by project developers and investors when realising an offshore wind park project in Germany. Firstly, it analyses the political environment for the offshore wind energy sector in Germany. Secondly, it gives an overview of the most relevant German legal statutes determining, inter alia, the establishment of wind energy priority areas, the applicable German feed-in tariff scheme, and the necessary approval process for offshore wind parks to be erected in the German exclusive economic zone. Thirdly, those potential bankability issues and financing challenges are discussed that an offshore wind park project planner might be exposed to when trying to secure a debt financing for such a sophisticated and capital-intensive project.

*Wind Power* Ben Backwell, 2014-09-23 Wind Power – The Struggle for Control of a New Global Industry looks at the nations, companies and people fighting for control of one of the world's fastest growing new industries and how we can harness one of the planet's most powerful energy resources – wind power. The book also examines the challenges the sector faces as it competes for influence and investment with the fossil fuel industry across the globe. The wind power business has grown from a niche sector within the energy industry to a global industry attracting substantial investment in recent years. In Europe wind has become the biggest source of new power generation capacity, while wind is successfully competing with the gas, coal and nuclear sectors in China and the US. The specialist wind turbine companies that pioneered the business have gone global over the last decade, while big industrial conglomerates have entered the fray. European companies are struggling to maintain their technological and market lead in the sector, in a three cornered battle with China and the US. Meanwhile, the industry is fighting to drive down costs in the

face of a fossil fuel generation industry bolstered by the onset of cheap shale gas. And wind companies continue to wrestle with a stop-go cycle of investment across the world, with some traditional markets stuttering under the impact of the financial crisis and fiscal austerity, while new power hungry markets in Asia and South America emerge. Wind Power – The Struggle for Control of a New Global Industry analyses the industry climbers, the investment trends and the technological advancements that will define the future of wind energy.

**Development of an Offshore Specific Wind Power Forecasting System** Melih Kurt, 2017-01-01 This study explains the data preparation processes, plausibility checking of meteorological parameters, correction of met-mast wind speed, and also the determination of the nominal power of a wind farm using met-mast measurements. The wind speed correction of met-mast FINO1 is evaluated from the perspective of power produced by

alpha ventus by using uncorrected and corrected measurements from this met-mast. Afterwards this data is used for the determination of nominal power for alpha ventus.

**Load Reducing Control for Wind Turbines.** Martin Shan,2022-09-19 In wind turbine engineering, it is a well-known fact that mechanical loading of the structural components, as tower and blades, can be heavily influenced by means of control. This work provides a comprehensive discussion on systematic control design for active load reduction. A review of the established approaches for load reducing pitch control is given. The basic idea is to adjust the blade pitch angles to provide active damping of structural loads or to compensate for periodic load components. A survey on rating and cost of wind turbine structural components is given to sketch the potential impacts of control design on Cost-of-Energy. Special focus in a separate chapter is given to the major trade-off between load reductions and rating of the pitch actuator system. In the main part, a pragmatic approach to systematic control design by use of modern multi-variable control design methods is introduced. Linear models in combination with disturbance spectra are applied to allow for fast and transparent optimization of the controllers. Exemplarily, this hierarchical control design / controller tuning approach is demonstrated for two different types of load reducing pitch controllers.

**Transboundary Marine Spatial Planning and International Law** Daud Hassan,Tuomas Kuokkanen,Niko Soininen,2015-07-16 Marine Spatial Planning (MSP) is an integrated and comprehensive approach to ocean governance and is used to establish a rational use of marine space and reconcile conflicting interests of its users. MSP allows both

a high level of environmental protection and a wide range of human activities and emphasizes coordinated networks of national, regional and global institutions. This book focuses on the framework of international law behind MSP and especially on the transboundary aspects of MSP. It first sets out a general framework for transboundary MSP and then moves on to compare and assess differences and similarities between different regions. Specific detailed case studies include the EU with the focus on the Baltic Sea and North Sea, the Bay of Bengal and Great Barrier Reef in Australia. The authors examine the national and regional significance of MSP from an integrated and sustainable ocean governance point of view. They also show how transboundary MSP can create opportunities and positive initiatives for cross-border cooperation and contribute to the effective protection of the regional marine environment.

*Energy in the 21st Century* John R. Fanchi, 2013 Many events that affect global energy production and consumption have occurred since the second edition of *Energy in the 21st Century* appeared in 2011. For example, an earthquake and tsunami in Japan led to the disruption of the Fukushima nuclear facility and a global re-examination of the safety of the

nuclear industry. Oil and natural gas prices continue to be volatile, and the demand for energy has been affected by the global economy. The third edition updates data and the discussion of recent events. Energy in the 21st Century has been used as the text for an introductory energy course for the general college student population. Based on student feedback, we have included several features that enhance the value of the third edition as a textbook. In particular, we have included learning objectives at the beginning of each chapter, end of chapter activities, a comprehensive index, and a glossary. Points to Ponder are abbreviated as P2P in the Learning Objectives boxes and are provided throughout the text. They are designed to encourage the reader to consider the material from different perspectives.
