The Stress Test Every Business Needs Jeffrey R. Greene, Steve Krousos, Julie Hood, Harsha Basnayake, William Casey, 2018-09-05

Future-proof your business today for stronger performance tomorrow

The Stress Test Every Business Needs: A Capital Agenda for Confidently Facing Digital Disruption, Difficult Investors, Recessions and Geopolitical Threats provides a comprehensive approach to creating value and flexibility in an increasingly volatile business environment that presents both great risks and opportunities every day. The authors extend the banking “stress test” concept to a company’s Capital Agenda – how executives manage capital, execute transactions and apply corporate finance tools to strategic and operational decisions. Having a static Capital Agenda, however appropriate for your current market position, is not enough in today’s uncertain world. Long-term success comes from building resilience into each element and in the way those elements interact. The book uses a broader definition of business stress that includes traditional macroeconomic and geopolitical risks, as well as technological disruption, hostile takeovers and activist shareholders. Companies that make poor strategic decisions or underperform operationally will likely find themselves facing great stress. And that stress is symmetric; threats come from downside risks and from missed opportunities. The chapters address the how and why of essential issues such as: Formulating corporate strategy in a digital world Pre-empting activist shareholders

Restoring distressed companies to operational and financial health
Ensuring effective collaboration among strategy, finance and operations
Getting the most out of your advisors
Proactively managing intrinsic value
Rigorously allocating capital across the enterprise
Acquiring and divesting for optimum value
Syncing financing decisions with business strategy and capital market conditions
Incorporating tax planning throughout the Capital Agenda
Liberating excess cash with leading working capital management practices
Aligning strategic goals and metrics to reach your company's full potential
Companies that develop strategy and set operational priorities with a balanced Capital Agenda are best positioned to control their own destiny.
The Stress Test Every Business Needs provides a roadmap to future-proof your business today for stronger performance tomorrow.

Managing Biotechnology Francoise Simon, Glen Giovannetti, 2017-09-01 A comprehensive overview of the new business context for biopharma companies, featuring numerous case studies and state-of-the-art marketing models Biotechnology has developed into a key innovation driver especially in the field of human healthcare. But as the biopharma industry continues to grow and expand its reach, development costs are colliding with aging

demographics and cost-containment policies of private and public payers. Concurrently, the development and increased affordability of sophisticated digital technologies has fundamentally altered many industries including healthcare. The arrival of new information technology (infotech) companies on the healthcare scene presents both opportunities and challenges for the biopharma business model. To capitalize on new digital technologies from R&D through commercialization requires industry leaders to adopt new business models, develop new digital and data capabilities, and partner with innovators and payers worldwide. Written by two experts, both of whom have had decades of experience in the field, this book provides a comprehensive overview of the new business context and marketing models for biotech companies. Informed by extensive input by senior biotech executives and leading consultancies serving the industry, it analyzes the strategies and key success factors for the financing, development, and commercialization of novel therapeutic products, including strategies for engagement with patients, physicians and healthcare payers. Throughout case studies provide researchers, corporate marketers, senior managers, consultants, financial analysts, and other professionals involved in the biotech sector with insights, ideas, and models. JACQUALYN FOUSE, PhD, RETIRED PRESIDENT AND CHIEF OPERATING OFFICER, CELGENE "Biotech companies have long been innovators, using the latest technologies to enable cutting edge science to help patients with serious diseases. This book is essential to help

biotech firms understand how they can—and must—apply the newest technologies including disruptive ones, alongside science, to innovate and bring new value to the healthcare system.”

BRUCE DARROW, MD, PhD, CHIEF MEDICAL INFORMATION OFFICER, MOUNT SINAI HEALTH SYSTEM “Simon and Giovannetti have written an essential user’s manual explaining the complicated interplay of the patients who deserve cutting-edge medical care, the biotechnology companies (big and small) creating the breakthroughs, and the healthcare organizations and clinicians who bridge those worlds.”

EMMANUEL BLIN, FORMER CHIEF STRATEGY OFFICER AND SENIOR VICE PRESIDENT, BRISTOL-MYERS SQUIBB “If you want to know where biopharma is going, read this book! Our industry is facing unprecedented opportunities driven by major scientific breakthroughs, while transforming itself to address accelerated landscape changes driven by digital revolutions and the emergence of value-based healthcare worldwide. In this ever-changing context, we all need to focus everything we do on the patients. They are why we exist as an industry, and this is ultimately what this insightful essay is really about.”

JOHN MARAGANORE, PRESIDENT AND CHIEF EXECUTIVE OFFICER, ALNYLAM PHARMACEUTICALS “Since the mapping of the human genome was completed nearly 15 years ago, the biotechnology industry has led the rapid translation of raw science to today’s innovative medicines. However, the work does not stop in the lab. Delivering these novel medicines to patients is a complex and multifaceted process, which is elegantly described in this new book.”

The Missiological Spirit Amos Yong, 2014-11-10

The field of the theology of mission has developed variously across Christian traditions in the last century. Pentecostal scholars and missiologists also have made their share of contributions to this area. This book brings the insights of pentecostal theologian Amos Yong to the discussion. It delineates the major features of what will be argued as central to a viable vision and praxis for Christian mission in a postmodern, post-Christendom, post-Enlightenment, post-Western, and postcolonial world. What emerges will be a distinctively pentecostally- and evangelically-informed missiological theology, one rooted in the Christian salvation-history narrative of Incarnation and Pentecost that is yet open to the world in its many and various cultural, ethnic, religious, and disciplinary discourses and realities. The argument unfolds through dialogical engagements with the work of others, concrete case studies, and systematic theological reflection. Yong's pneumatological and missiological imagination proffers a model for Christian theology of mission suitable for the twenty-first-century global and pluralistic context even as it exemplifies how a missiological understanding of theology itself unfolds amidst engagements with contemporary ecclesial practices and academic/theological impulses.

Artificial Intelligence in Accounting Othmar M. Lehner, Carina Knoll, 2022-08-05 Artificial intelligence (AI) and Big Data based applications in accounting and auditing have become pervasive in recent years. However, research on the societal implications of the widespread and partly unregulated use of AI and Big Data in several industries remains scarce despite salient and

competing utopian and dystopian narratives. This book focuses on the transformation of accounting and auditing based on AI and Big Data. It not only provides a thorough and critical overview of the status-quo and the reports surrounding these technologies, but it also presents a future outlook on the ethical and normative implications concerning opportunities, risks, and limits. The book discusses topics such as future, human-machine collaboration, cybernetic approaches to decision-making, and ethical guidelines for good corporate governance of AI-based algorithms and Big Data in accounting and auditing. It clarifies the issues surrounding the digital transformation in this arena, delineates its boundaries, and highlights the essential issues and debates within and concerning this rapidly developing field. The authors develop a range of analytic approaches to the subject, both appreciative and sceptical, and synthesise new theoretical constructs that make better sense of human-machine collaborations in accounting and auditing. This book offers academics a variety of new research and theory building on digital accounting and auditing from and for accounting and auditing scholars, economists, organisations, and management academics and political and philosophical thinkers. Also, as a landmark work in a new area of current policy interest, it will engage regulators and policy makers, reflective practitioners, and media commentators through its authoritative contributions, editorial framing and discussion, and sector studies and cases.

Fintech and Cryptocurrency Mohd Naved,V. Ajantha

Devi,Aditya Kumar Gupta,2023-12-07 FINTECH and CRYPTOCURRENCY Dive into the world of fintech and cryptocurrency through the engaging perspectives of this diverse group of authors and uncover the intricate connections between technology, finance, and cryptocurrency that make this a must-have for anyone intrigued by the future of digital society. Digital currencies, decentralization of money, and the growth of new technologies like blockchain, the Internet of Things, and machine learning have produced new opportunities and difficulties for banking and finance, as well as users of these services in electronic commerce. New banking and finance technologies may improve operational efficiency, risk management, compliance, and client pleasure, but they can decrease barriers and introduce new concerns, such as cybersecurity risk. Cryptocurrencies with smart contracts for payments and trading, as well as AI systems with adaptive algorithms that allow picture and speech recognition, expert judgement, group categorization, and forecasting in a variety of fields, are instances of increased automation. Simultaneously, the potentials pose risks and raise regulatory concerns. The rise of blockchain technology and its widespread use have had a significant impact on the operation and management of digital systems. At the same time, researchers and practitioners have paid close attention to digital finance. Blockchain's first applications were limited to the production of digital currency, but it has now been expanded to include financial and commercial applications. Innovative digital finance has had a huge impact on business

and society since it has been extensively adopted by businesses and consumers. As a result, the goal of this edited book is to expand and deepen our knowledge of the business possibilities of novel blockchain and digital financial applications.

Special Features of the UN Model Convention Anna Binder, Viktoria Wöhrer, 2019-10-01 Detailed research on the UN Model Convention's unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations. Driven by the aim to achieve consistency in the international tax treaty practice, the structure and content is, to a large extent, similar in the UN Model and the OECD Model. However, whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries, the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and amending the UN Model Convention. Compared to the OECD Model Convention, the UN Model Convention aims at giving more weight to the source principle. Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non-residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided.

Interestingly, in the discussions of the tax challenges arising from the digitalization of the economy, the OECD and the G20 are also exploring options to allocate more taxing rights to the jurisdiction of the customer and/or user, i.e., the 'market jurisdictions'. As this has traditionally been the focus of the UN Model Convention, its unique features and developing countries' practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement. This book contains the master's theses of the full-time LL.M. program 2018-2019 for which 'Special Features of the UN Model Convention' has been chosen as the general topic. With this book, the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention, which are explored in detail. This is supplemented with an evaluation of the function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD's BEPS project on the UN Model.

Seeing What Others Don't Gary Klein, 2013-06-25 A renowned cognitive psychologist reveals the science behind achieving breakthrough discoveries, allowing readers to confidently solve problems, improve decision-making, and achieve success. Insights-like Darwin's understanding of the way evolution actually works, and Watson and Crick's breakthrough discoveries about the structure of DNA-can change the world. Yet we know very little about when, why, or how insights are formed-or

what blocks them. In *Seeing What Others Don't*, Gary Klein unravels the mystery. Klein is a keen observer of people in their natural settings- scientists, businesspeople, firefighters, police officers, soldiers, family members, friends, himself- and uses a marvelous variety of stories to illuminate his research into what insights are and how they happen. What, for example, enabled Harry Markopolos to put the finger on Bernie Madoff? How did Dr. Michael Gottlieb make the connections between different patients that allowed him to publish the first announcement of the AIDS epidemic? How did Martin Chalfie come up with a million-dollar idea (and a Nobel Prize) for a natural flashlight that enabled researchers to look inside living organisms to watch biological processes in action? Klein also dissects impediments to insight, such as when organizations claim to value employee creativity and to encourage breakthroughs but in reality block disruptive ideas and prioritize avoidance of mistakes. Or when information technology systems are dumb by design and block potential discoveries. Both scientifically sophisticated and fun to read, *Seeing What Others Don't* shows that insight is not just a eureka! moment but a whole new way of understanding.

Mathematical Methods and Physical Insights Alec J. Schramm, 2022-06-16 Mathematics instruction is often more effective when presented in a physical context. Schramm uses this insight to help develop students' physical intuition as he guides them through the mathematical methods required to study upper-level physics. Based on the undergraduate Math Methods course he has taught for many years at Occidental College, the text encourages a symbiosis through which the physics illuminates the math, which in turn informs the physics. Appropriate for both classroom and self-study use,

the text begins with a review of useful techniques to ensure students are comfortable with prerequisite material. It then moves on to cover vector fields, analytic functions, linear algebra, function spaces, and differential equations. Written in an informal and engaging style, it also includes short supplementary digressions ('By the Ways') as optional boxes showcasing directions in which the math or physics may be explored further. Extensive problems are included throughout, many taking advantage of Mathematica, to test and deepen comprehension.

Big Data Is Not a Monolith Cassidy R.

Sugimoto, Hamid R. Ekbia, Michael

Mattioli, 2016-10-21 Perspectives on the varied challenges posed by big data for health, science, law, commerce, and politics. Big data is ubiquitous but heterogeneous. Big data can be used to tally clicks and traffic on web pages, find patterns in stock trades, track consumer preferences, identify linguistic correlations in large corpuses of texts. This book examines big data not as an undifferentiated whole but contextually, investigating the varied challenges posed by big data for health, science, law, commerce, and politics. Taken together, the chapters reveal a complex set of problems, practices, and policies. The advent of big data methodologies has challenged the theory-driven approach to scientific knowledge in favor of a data-driven one. Social media platforms and self-tracking tools change the way we see ourselves and others. The collection of data by corporations and government threatens privacy while promoting

transparency. Meanwhile, politicians, policy makers, and ethicists are ill-prepared to deal with big data's ramifications. The contributors look at big data's effect on individuals as it exerts social control through monitoring, mining, and manipulation; big data and society, examining both its empowering and its constraining effects; big data and science, considering issues of data governance, provenance, reuse, and trust; and big data and organizations, discussing data responsibility, "data harm," and decision making.
