The Bluest Eye Toni Morrison, 2007-05-08 NATIONAL BESTSELLER • From the acclaimed Nobel Prize

winner—a powerful examination of our obsession with beauty and conformity that asks questions about race, class, and gender with characteristic subtly and grace. In Morrison’s acclaimed first novel, Pecola Breedlove—an 11-year-old Black girl in an America whose love for its blond, blue-eyed children can devastate all others—prays for her eyes to turn blue: so that she will be beautiful, so that people will look at her, so that her world will be different. This is the story of the nightmare at the heart of her yearning, and the tragedy of its fulfillment. Here, Morrison’s writing is “so precise, so faithful to speech and so charged with pain and wonder that the novel becomes poetry” (The New York Times).

Research into Design for a Connected World
Amaresh Chakrabarti, 2019-01-08 This book showcases cutting-edge research papers from the 7th International Conference on Research into Design (ICoRD 2019) – the largest in India in this area – written by eminent researchers from across the world on design processes, technologies, methods and tools, and their impact on innovation, for supporting design for a connected world. The theme of ICoRD’19 has been “Design for a Connected World”. While Design traditionally focused on developing products that worked on their own, an emerging trend is to have products with a smart layer that makes them context aware and responsive, individually and collectively, through collaboration with other physical and digital objects with which these are connected. The papers in this volume explore these themes, and their key focus is connectivity: how do products and their

development change in a connected world? The volume will be of interest to researchers, professionals and entrepreneurs working in the areas on industrial design, manufacturing, consumer goods, and industrial management who are interested in the use of emerging technologies such as IOT, IIOT, Digital Twins, I4.0 etc. as well as new and emerging methods and tools to design new products, systems and services.

Searchial Marketing: Dr. Alan Glazier, 2011-02-18
The buzz surrounding social media focuses on how business can build relationships by participating in the online conversation. When it works, social media relationship building is often labor and time intensive with a return on investment that is often hard to measure. Not many people understand that social media campaigns can be orchestrated to build relationships and drive in new business at a much greater rate than using the relationship aspect of social media alone provides. When I discovered this, relationship building became the least compelling part of the picture. Searchial is

a phrase I created to describe the method of interacting within the strange new world of social media while elevating your profile in internet searches for the products and services you offer. This book teaches do-it-yourself methods of implementing a searchial media campaign. It demonstrates the added value of practicing searchial media instead of just social media. Social tools have the power to drive new business into your organization not only through communicating and relationship building, but by coincidentally causing your listing in search engines to rank higher in searches for keywords and key phrases people are using to find the products and services you offer in a specific geographical area or worldwide. The term Searchial reflects the realization that my time and effort were best spent driving new patients into my medical practice using social tools to improve our position in Google, Bing and other search engines, not just building and strengthening existing relationships. This book can be applied to and used as a guide within any industry at any stage of the new media marketing game. Appendices contain information specific to social media and search elevation in the medical profession, specifically small medical business, hospital and clinic and pharmaceutical companies.
