Industrial Ventilation Design Guidebook: Volume 1 Howard D. Goodfellow,Risto Kosonen,2020-07-24 The fully revised and restructured two-volume 2nd edition of the Industrial Ventilation Design Guidebook develops a systematic approach to the engineering design of industrial ventilation systems and provides engineers guidance on how to implement this state-of-the-art ventilation technology on a global basis.Volume 1: Fundamentals features the latest research technology in the broad field of ventilation for contaminant control including extensive updates of the foundational chapters from the previous edition.With major contributions by experts from Asia, Europe and North America in the global industrial ventilation field, this new edition is a valuable reference for consulting engineers working in the design of air pollution and sustainability for their industrial clients (processing and manufacturing), as well as mechanical, process and plant engineers looking for design methodologies and advice on sensors and control algorithms for specific industrial operations so they can meet challenging targets in the low carbon economy. Presents practical designs for different types of industrial systems including descriptions and new designs for ducted systems Discusses the basic processes of air and containment movements such as jets, plumes, and boundary flows inside ventilated spaces Introduces the new concept of target levels in the systematic design methodology such as assessing target levels for key parameters of industrial air technology and the hierarchy of different target levels Provides future directions and opportunities in the industrial design field

Picture Perfect Flash Roberto Valenzuela,2024-01-22 Conquer portable strobes and hot shoe flash to create extraordinary portraits! Whether you use small, portable strobes or hot shoe flash, flash photography has always been daunting for most photographers. Without a system and workflow for thinking about and working with flash, you can easily end up feeling stuck, or you end up flailing—randomly changing settings, positions, and modifiers—and hoping for the best. It’s not surprising that this leads to failure and frustration. Enter bestselling author Roberto Valenzuela and the Picture Perfect Flash System, which he created to empower you to finally conquer your flash and create photographs that fulfill your intention and vision. There are two key components to this system, which Roberto calls FACES and NAME. The FACES component provides a framework for thinking about how you want or need to use flash in a particular scene: • Fix the Light: Do you need to fix a low light problem, an unwanted color cast, or a situation with poor quality of light? • Add Light: Do you need to add more light to boost or enhance the available light or create separation? • Create a Mood: Are you using light to create a desired mood for a location or subject? • Effects with Flash: Are you using flash for creative visual effect? • Sculpt the Light: Do you need to sculpt the light to add drama, shape, and contouring? Once you’ve found your purpose for the light, the NAME component provides an essential workflow for carrying out your flash photography in a methodical way so that you get consistent and predictable results: • Number of Flashes: How many flashes do you need? • Angle of Flashes: Where do the flashes need to be positioned? • Modifiers for Flashes: How do you need to modify your flashes? • Energy of Flashes: What power do the flashes need to be? The Picture Perfect Flash System is covered in Part One: The Flash Advantage, which is the core framework of the book. In Part Two: Flash Basics Explained, Roberto covers the flash features you need to know: TTL, Manual, 1st and 2nd Curtain Sync, High Speed Sync, and Channels and Groups. Finally, in Part Three: Dynamic Flash Exercises, Roberto gives you a dozen lighting exercises that will substantially hone and advance your skills. With Picture Perfect Flash, you’ll finally be able to conquer your flash...and make the kind of portraits you’ve always wanted to create. TABLE OF CONTENTS Foreword by Miss Universe, R’Bonney Nola Gabriel Introduction PART ONE: The Flash Advantage Chapter 1: The Picture Perfect Flash System Chapter 2: Fix the Light Chapter 3: Add Light Chapter 4: Create a Mood Chapter 5: Effects with Flash Chapter 6: Sculpt the Light Chapter 7: NAME: Your Game Plan PART TWO: Flash Basics Explained Chapter 8: TTL: Let the Flash Decide Chapter 9: Manual Mode Chapter 10: 1st Curtain Sync, 2nd Curtain Sync, and High Speed Sync Chapter 11: Channels and Groups PART THREE: Dynamic Flash Exercises Chapter 12: Lighting Exercises

Pain Medicine Salim M. Hayek,Binit J. Shah,Mehul J. Desai,Thomas C. Chelimsky,2015 Pain Medicine approaches the management of common chronic pain conditions using a unique interdisciplinary approach focusing on multiple facets of patients' clinical presentations. The comprehensive discussions in each chapter are centered on a vignette that mimics a fairly typical case presentation. In addition to detailed classical descriptions of the epidemiology, pathophysiology, prognosis, and confounding psychosocial factors of each disease entity, the text provides various interdisciplinary management approaches. The case-based approach illustrates key clinical points and demonstrates how practitioners from a variety of disciplines can work together to deliver optimal patient care. The ACGME criteria for fellowship training in Pain Medicine calls for an interdisciplinary approach, with required training and exposure to the fields of Anesthesiology, Neurology, Psychiatry, and Physical Medicine & Rehabilitation. As this trend is occurring in private pain clinics and practices as well as in academic institutions, there is a need for a volume which integrates the approaches of the various disciplines into a coherent whole to guide clinicians and trainees in the interdisciplinary management of pain. With each chapter authored by respected experts in the key specialties involved with pain management, Pain Medicine is a highly applicable clinical reference for practitioners, an excellent anchor text for fellows and residents in training, and a thorough review for initial board certification as well as maintenance of certification exams.

Pain Management Chris J. Main,Michael J. L. Sullivan,Paul J. Watson,2007-09-20 This title is directed primarily towards health care professionals outside of the United States. It deals specifically with the management of potentially chronic I pain, how to assess patients with pain, the factors involved in the development of chronic pain and the setting up and running of a pain management programme. The main focus is on musculoskeletal and fibromyalgic type pain. Cancer pain is not addressed. The authors address not only what is recommended in the management of pain but also whether and why it is done, thereby covering not only the content of interdisciplinary pain management but also the processes involved. Provides extensive background material and covers broad issues which other books lack Focuses on not only what is done with the management of pain but whether and why it is done Includes the nuts and bolts of setting up and running a pain management programme Addresses the application of pain management programmes in a wide range of fields Has a multidisciplinary approach and therefore appeals to a multidisciplinary market Two new co-authors: Kay Greasley and Bengt Sjolund. Major restructuring of chapters and rewriting of content with new authors for many of them. Greatly increased discussion of biopsychosocial management in individual clinical practice. Addresses the needs of the individual practitioners as well as those working in specialised pain management units. Includes more on primary care and secondary pain prevention. Expanded discussion of the clinical-occupational interfaces. Particular emphasis on the identification and targeting of modifiable risk factors for chronic pain and prolonged disability. The following topics strengthened throughout: communication, the nature of groups, medication and iatrogenics. Potential of an evidence-based biopsychosocial approach to pain management highlighted.

Managing Knowledge, Absorptive Capacity And Innovation Joe Tidd,2021-05-05 Knowledge Management focuses on identifying, sharing, storing, and exploiting internal knowledge, whereas Open Innovation is more concerned with sources of external knowledge. However, this simple dichotomy between open and closed approaches is unhelpful and not realistic. Instead, it is the interaction between internal and external knowledge

that creates dynamic capabilities and the ability to innovate. In particular, we need to better understand the interactions between internal and external knowledge, and how these influence innovation outcomes under different conditions. This edited volume, Managing Knowledge, Absorptive Capacity, and Innovation, provides an opportunity to combine contemporary interests in Open Innovation with the classic notion of absorptive capacity, to better understand how organisations can manage the absorption and exploitation of inbound external sources of knowledge in order to innovate.

The chronic challenge - new vistas on long-term multisite contacts to the central nervous system Ulrich G. Hofmann,Jürgen Krüger,2015-06-19 Have you ever heard of a Hype-Cycle? It is a description that was put forward by an IT consultancy firm to describe certain phenomena that happen within the life cycle of new technology products. As Fenn and Raskino stated in their book (Fenn and Raskino 2008), a novel technology - a “Technology Trigger” - gives rise to a steep increase in interest, leading to the “Peak of Inflated Expectations”. Following an accumulation of more detailed knowledge on the technology and its short-comings, the stake holders may need to traverse a “Trough of Disillusionment”, which is followed by a shallower “Slope of Enlightenment”, before finally reaching the “Plateau of Productivity”. In spite of the limitations and criticisms levied on this over-simplified description of a technology’s life-cycle, it is nonetheless able to describe well the situation we are all experiencing within the brain-machine-interfacing community. Our technology trigger was the development of batch-processed multisite neuronal interfaces based on silicon during the 1980s and 1990s (Sangler and Wise 1990, Campbell, Jones et al. 1991, Wise and Najafi 1991, Rousche and Normann 1992, Nordhausen, Maynard et al. 1996). This gave rise to a seemingly exponential growth of knowledge within the neurosciences, leading to the expectation of thought-controlled devices and prostheses for handicapped people in the very near future (Chapin, Moxon et al. 1999, Wessberg, Stambaugh et al. 2000, Chapin and Moxon 2001, Serruya, Hatsopoulos et al. 2002). Unfortunately, whereas significant steps towards artificial robotic limbs could have been implemented during the last decade (Johannes, Bigelow et al. 2011, Oung, Pohl et al. 2012, Belter, Segil et al. 2013), direct invasive intracortical interfacing was not quite able to keep up with these expectations. Insofar, we are currently facing the challenging, but tedious walk through the Trough of Disillusionment. Undoubtedly, more than two decades of intense research on brain-machine-interfaces (BMI’s) have produced a tremendous wealth of information towards the ultimate goal: a clinically useful cortical prosthesis. Unfortunately even today - after huge fiscal efforts - the goal seems almost to be as far away as it was when it was originally put forward. At the very least, we have to state that one of the main challenges towards a clinical useful BMI has not been sufficiently answered yet: regarding the long term - or even truly chronic - stability of the neural cortical interface, as well as the signals it has to provide over a significant fraction of a human’s lifespan. Even the recently demonstrated advances in BMI’s in both humans and non-human primates have to deal with a severe decay of spiking activity that occurs over weeks and months (Chestek, Gilja et al. 2011, Hochberg, Bacher et al. 2012, Collinger, Kryger et al. 2014, Nuyujukian, Kao et al. 2014, Stavisky, Kao et al. 2014, Wodlinger, Downey et al. 2014) and resolve to simplified features to keep a brain-derived communication channel open (Christie, Tat et al. 2014).
