Elementary Forms of Social Relations Theodore D. Kemper, 2016-10-04 Elementary Forms of Social Relations introduces the reader to social life as a perpetual quest by individuals to gain attention, respect and regard (status) accompanied by an effort to marshal defensive and offensive means (power) to overcome the reluctance of others to grant status. This work is based on empirical evidence from many research settings showing that status and power are the main relational modes and that to understand our own and others' social behaviour, we need to understand how status and power operate in relational conduct. The status-power and reference group approach is applied to enumerate the relatively few ways in which social interaction can occur. Chapters compare the analytic value of the concept of the self with the value of reference groups that create the self. Threads of investigation include: considering the fallacy of abandoning reference groups as sources of cultural information in favour of approaches derived from cognitive neuroscience; examining a multi-person conversation from a status-power-and-reference-group stance as against a view of the same conversation based on principles of Conversation Analysis; and asserting the universality of personal status-power interests even among national leaders to name a few. By applying the author's main theory to a range of specific cases, the author reaffirms the importance of the social to our understanding of a variety of phenomena, including the self, cultural transmission, the conduct of leaders and economic activity. This book provides readers with transparent instances of the theory in action and thus will appeal to scholars across the social sciences with interests in theory and social interaction.

*Robotics, Vision and Control* Peter Corke, 2023-05-09 This textbook provides a comprehensive, but tutorial, introduction to robotics, computer vision, and control. It is written in a light but informative conversational style, weaving text, figures, mathematics, and lines of code into a narrative that covers robotics and computer vision—separately, and together as robotic vision. Over 1600 code examples show how complex problems can be decomposed and solved using just a few simple lines of code. This edition is based on Python and is accompanied by fully open-source Python-based Toolboxes for robotics and machine vision. The new Toolboxes enable the reader to easily bring the algorithmic concepts into practice and work with real, non-trivial, problems on a broad range of computing platforms. For the beginning student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used. The code can also be the starting point for new work, for practitioners, students, or researchers, by writing programs based on Toolbox functions, or modifying the Toolbox code itself.

Readings in Planning James Allen, James A. Hendler, Austin Tate, 1990 This book presents four contributions to planning research within an integrated framework. James Allen offers a survey of his research in the field of temporal reasoning, and then describes a planning system formalized and implemented directly as an inference process in the temporal logic. Starting from the same logic, Henry Kautz develops the first formal specification of the plan recognition process and develops a powerful family of algorithms for plan recognition in complex situations. Richard Pelavin then extends the temporal logic with model operators that allow the representation to support reasoning about complex planning situations involving simultaneous interacting actions, and interaction with external events. Finally, Josh Tenenb erg introduces two different formalisms of abstraction in planning systems and explores the properties of these abstraction techniques in depth.

**Computer Assisted Survey Information Collection** Reginald P. Baker, 1998-10-23 The latest computer assisted methods for survey research Computer assisted survey information collection (CASIC) methods are rapidly replacing traditional paper and pencil survey procedures. Researchers now apply computer technologies at every step of the survey process, from automating interviews and computerizing data collection to data capture and preparation. CASIC techniques are reshaping today's survey research and methodology -- and redefining tomorrow's. Computer Assisted Survey Information Collection is the most up-to-date and authoritative resource available on CASIC methods and issues. Its comprehensive treatment provides the scope needed to evaluate past development and implementation of CASIC designs, to anticipate its future directions, and to identify new areas for research and development. Written in an array of evidentiary styles by more than 60 leading CASIC practitioners from numerous disciplines, this coherently organized volume: \* Covers CASIC development and its integration into existing designs and organizations \* Discusses instrument development and design \* Examines survey design issues, including the incorporation of experiments \* Discusses case management of automated survey systems \* Evaluates training and supervision of computer assisted interviewers \* Reviews self-administered surveys, including optically

scannablemail surveys \* Considers emerging technologies, such as voice recognition, pen-CASIC, and the Web as a data collection tool. Supplemented with copious tables, figures, and references as well as an extensive glossary, Computer Assisted Survey Information Collection provides a solid foundation in CASIC for seasoned research-survey practitioners and graduate students across a broad spectrum of social science disciplines.

Consumption, Status, and Sustainability Paul Roscoe, Cindy Isenhour, 2021-08-12 This volume addresses current concerns about the climate and environmental sustainability by exploring one of the key drivers of contemporary environmental problems: the role of status competition in generating what we consume, and what we throw away, to the detriment of the planet. Across time and space, humans have pursued social status in many different ways - through ritual purity, singing or dancing, child-bearing, bodily deformation, even headhunting. In many of the world's most consumptive societies, however, consumption has become closely tied to how individuals build and communicate status. Given this tight link, people will be reluctant to reduce consumption levels - and environmental impact -- and forego their ability to communicate or improve their social standing. Drawing on cross-cultural and archaeological evidence, this book asks how a stronger understanding of the links between status and consumption across time, space, and culture might bend the curve towards a more sustainable future.

**Christian Theology and the Status of Animals** R. McLaughlin, 2014-02-13 The author argues that there are conflicting traditions with regard to the question of what is the moral standing of animals according to Christianity. The dominant tradition maintains that animals are primarily resources but there are alternative strands of Christian thought that challenge this view.

*Script-Based Semantics* Salvatore Attardo, 2020-02-24 The book contains essays in honor of Victor Raskin. The contributions are all directly related to some of the major areas of work in which Raskin's scholarship has spanned for decades. The obvious connecting idea is the encyclopedic script-based foundation of lexical meaning, which informs his pioneering work in semantics in the 1970s and 1980s. The first part of the book collects articles directly concerned with script-based semantics, which examine both the theoretical and methodological premises of the idea and its applications. Script-based semantics is the foundation of both Raskin's ground-breaking work in humor research (addressed by the articles in part 2) and in Ontological semantics (addressed in part 3), the most recent development of script-based semantics. The fourth part is dedicated to a less-known, but equally important, strand of Raskin's research, the applications of linguistics to other fields, including writing, lexicography, and professional applications (e.g., tourism). Overall, the book provides an up-to-date, in-depth discussion of an influential strand of the discussion on semantics and its most recent developments and influence on other seemingly unrelated fields, such as Cognitive Linguistics.

*Gender Literacy & Curriculum* Alison Lee, 2014-03-18 First Published in 1996. Gender, Literacy, Curriculum is a major contribution to research and theory in literacy and curriculum studies. Alison Lee looks at how the texts and discourses of schooling construct 'geography' as a curriculum field, and how this construction is tied closely with students' gendered identities and practices in the classroom. She brings together discourse analyses of research texts, textbooks, classroom talk, students' and teachers' accounts, with a detailed linguistic analysis of students' written work. This title is of particular interest to those working in literacy education and curriculum, discourse analysis and applied linguistics, feminisms and critical pedagogies.

*Changing How We Choose* A. David Redish, 2022-12-06 The "new science of morality" that will change how we see each other, how we build our communities, and how we live our lives. In *Changing How We Choose*, David Redish makes a bold claim: Science has "cracked" the problem of morality. Redish argues that moral questions have a scientific basis and that morality is best viewed as a technology—a set of social and institutional forces that create communities and drive cooperation. This means that some moral structures really are better than others and that the moral technologies we use have real consequences on whether we make our societies better or worse places for the people living within them. Drawing on this new scientific definition of morality and real-world applications, *Changing How We Choose* is an engaging read with major implications for how we see each other, how we build our communities, and how we live our lives. Many people think of human interactions in terms of conflicts between individual freedom and group cooperation, where it is better for the group if everyone cooperates but better for the individual to cheat. Redish shows that moral codes are technologies that change the game so that cooperating is good for the community and for the individual. Redish, an authority on neuroeconomics and decision-making, points out that the key to moral codes is how they interact with the human decision-making process. Drawing on new insights from behavioral economics, sociology, and neuroscience, he shows that there really is a "new science of morality" and that this new science has implications—not only for how we understand ourselves but also for how we should construct those new moral technologies.
