**Art in Chicago** Maggie Taft,Robert Cozzolino,2018-10-10 For decades now, the story of art in America has been dominated by New York. It gets the majority of attention, the stories of its schools and movements and masterpieces the stuff of pop culture legend. Chicago, on the other hand . . . well, people here just get on with the work of making art. Now that art is getting its due. *Art in Chicago* is a magisterial account of the long history of Chicago art, from the rupture of the Great Fire in 1871 to the present, Manierre Dawson, László Moholy-Nagy, and Ivan Albright to Chris Ware, Anne Wilson, and Theaster Gates. The first single-volume history of art and artists in Chicago, the book—in recognition of the complexity of the story it tells—doesn't follow a single continuous trajectory. Rather, it presents an overlapping sequence of interrelated narratives that together tell a full and nuanced, yet wholly accessible history of visual art in the city. From the temptingly blank canvas left by the Fire, we loop back to the 1830s and on up through the 1860s, tracing the beginnings of the city's institutional and professional art world and community. From there, we travel in chronological order through the decades to the present. Familiar developments—such as the founding of the Art Institute, the Armory Show, and the arrival of the Bauhaus—are given a fresh look, while less well-known aspects of the story, like the contributions of African American artists dating back to the 1860s or the long history of activist art, finally get suitable recognition. The six chapters, each written by an expert in the period,

brilliantly mix narrative and image, weaving in oral histories from artists and critics reflecting on their work in the city, and setting new movements and key works in historical context. The final chapter, comprised of interviews and conversations with contemporary artists, brings the story up to the present, offering a look at the vibrant art being created in the city now and addressing ongoing debates about what it means to identify as—or resist identifying as—a Chicago artist today. The result is an unprecedentedly inclusive and rich tapestry, one that reveals Chicago art in all its variety and vigor—and one that will surprise and enlighten even the most dedicated fan of the city’s artistic heritage. Part of the Terra Foundation for American Art’s year-long Art Design Chicago initiative, which will bring major arts events to venues throughout Chicago in 2018, *Art in Chicago* is a landmark publication, a book that will be the standard account of Chicago art for decades to come. No art fan—regardless of their city—will want to miss it.

**Global Civil Society 2005/6** Helmut K Anheier, Mary Kaldor, Marlies Glasius, 2005-10-18 □ This fifth Global Civil Society Yearbook continues the intellectual shaping of an emerging global civil society. As the Global Call for Action on Poverty, G-Cap, makes its voice heard under the whiteband symbol, this analysis of current issues of migration, climate change and UN reform, with a focus on gender and social movements, provides a timely intellectual resource to strengthen shared commitments □ - Mary Robinson □ These annual volumes have themselves become an occasion for enacting global civil society: each Yearbook is a project that involves hundreds of people around the world in various ways... and they often fight it out around divergent understandings of critical issues. This volume enters the extreme zones we face today - the growing injustices which increasingly are only addressed by global civil society actors, but also the powerful innovations brought about by new technologies that can construct whole new global spaces for global civil society □ - Saskia Sassen □ It is increasingly difficult to recall memorable analyses of international social movements before GCS. But after half a decade each annual issue is not only a magnum opus but is also definitive, distinctive & comparative. The study of global civil society can never be the same! □ - Timothy M Shaw, Professor of Commonwealth Governance & Development & Director, Institute of Commonwealth Studies, School of Advanced Study, University of London The annual Global Civil Society Yearbooks

provide an indispensable guide to global civil society or civic participation and action around the world. Each yearbook includes commissioned contributions from leading commentators across the social sciences on the latest issues and developments. Each yearbook also explores and presents the latest approaches to measuring and analyzing global civil society and provides a chronology of key global civil society events in the year. The 2005/6 Yearbook explores the role of gender in global civil society and investigates the core issues of labour migration, climate change and UN reform. In part three, contributions consider the impact of social forums and wireless technology, as well as reviewing the discussion of networks from the 2004/5 Yearbook. Illustrated throughout with summaries, maps, figures, tables and photographs and encompassing regular features such as updates on previous editions and the annual data reports, the Global Civil Society Yearbook remains the standard work on all aspects of contemporary global civil society for activists, practitioners, students and academics alike. It is essential reading for anyone seeking a deeper understanding of the key actors, forms and manifestations of global civil society around the world today.

**Stage Manager** Larry Fazio, 2017-01-12 *Stage Manager: The Professional Experience—Refreshed* takes the reader on a journey through all aspects of the craft of stage management in theatre, including the technological advancements that have come to theatre and the stage manager's job. Chapters are laid out to reflect the order in which stage managers experience and perform their work: what makes a good stage manager, seeking the job, building a resume, interviewing for the job, and getting the job (or not getting the job). Included are chapters on the chain of command, working relationships, tool and supplies, creating charts, plots, plans and lists, the rehearsal period, creating the prompt book, calling cues, and the run of the show. These are just some of the many topics covered in this book. In addition, the author uses interviews with stage management professionals in various stages of production, providing another view of how the stage manager is perceived and what is expected from the work of the stage manager. Fifteen years after the original publication of *Stage Manager: The Professional Experience*, this new and refreshed edition is now in color to help clarify and illustrate points in the text. It is fully updated to reflect the world of computerized technology: smart phones, thinly designed laptops, tablets, use of email and text messaging, storing and sharing files and information in cloud-based apps. Then there are the innovations of automation—electronically moving scenery, scenic projections—casting images and patterns on the stage; moving lights; LED

luminaires; lasers; and greater use of fog and haze machines. In addition, the extensive glossary of more than 600 terms and phrases had been extended to well over 700, providing an excellent professional vocabulary for anyone hoping to be a theatre stage manager or already working in the field.

*Intelligent Computing* Kohei Arai, Supriya Kapoor, Rahul Bhatia, 2018-11-01 This book, gathering the Proceedings of the 2018 Computing Conference, offers a remarkable collection of chapters covering a wide range of topics in intelligent systems, computing and their real-world applications. The Conference attracted a total of 568 submissions from pioneering researchers, scientists, industrial engineers, and students from all around the world. These submissions underwent a double-blind peer review process. Of those 568 submissions, 192 submissions (including 14 poster papers) were selected for inclusion in these proceedings. Despite computer science's comparatively brief history as a formal academic discipline, it has made a number of fundamental contributions to science and society—in fact, along with electronics, it is a founding science of the current epoch of human history ('the Information Age') and a main driver of the Information Revolution. The goal of this conference is to provide a platform for researchers to present fundamental contributions, and to be a premier venue for academic and industry practitioners to share new ideas and development experiences. This book collects state of the art chapters on all aspects of Computer Science, from classical to intelligent. It covers both the theory and applications of the latest computer technologies and methodologies. Providing the state of the art in intelligent methods and techniques for solving real-world problems, along with a vision of future research, the book will be interesting and valuable for a broad readership.

Ever Yours Vincent van Gogh,2014 In addition to his many remarkable paintings and drawings, Vincent van Gogh (1853-1890) left behind a fascinating and voluminous body of correspondence. This highly accessible book includes a broad selection of 265 letters, from a total of 820 in existence, that focus on Van Gogh's relentless quest to find his destiny, a search that led him to become an artist; the close bond with his brother Theo; his fraught relationship with his father; his innate yearning for recognition; and his great love of art and literature. The correspondence not only offers detailed insights into Van Gogh's complex inner life, but also re-creates the world in which he lived and the artistic avant-garde that was taking hold in Paris. The letters are accompanied by a general introduction, historic family photographs, and reproductions of 100 actual letters that contain sketches by Van Gogh. In sum, this book is the essential book on Van Gogh's letters, which every art and literature lover needs to own.

**Time Expression and Named Entity Recognition** Xiaoshi Zhong,Erik Cambria,2021-08-23 This book presents a synthetic analysis about the characteristics of time expressions and named entities, and some proposed methods for leveraging these characteristics to recognize time expressions and named entities from unstructured text. For modeling these two kinds of entities, the authors propose a rule-based method that introduces an abstracted layer between the specific words and the rules, and two learning-based methods that define a new type of tagging scheme based on the constituents of the entities, different from conventional position-based tagging schemes that cause the problem of inconsistent tag assignment. The authors also find that the length-frequency of entities follows a family of power-law distributions. This finding opens a door, complementary to the rank-frequency of words, to understand our communicative system in terms of language use.
