International Research on Natural Resource Management

Hermann Waibel,David Zilberman,2007-11-08 This book is addressed to scientists, researchers, development specialists and policy makers who deal with natural resources and agriculture in the developing countries. It aims to (1) provide evidence of the impact of natural resource management research (NRMR) in the CGIAR; (2) establish a methodological foundation for impact assessments of NRMR; and (3) draw up a set of lessons for future impact assessment studies. The book consists of three main parts. Part I (chapters 1-3) provides the definitional, historical, and theoretical background for NRMR impact assessment in the CGIAR. Part II (chapters 4-11) presents the methods and results of seven case studies on the impact of NRMR projects carried out in the CGIAR. Two summary chapters (12 and13) are presented in part III. The book has a subject index.

Security and Environmental Sustainability of Multimodal Transport Michael Bell,Solmaz Haji Hosseinloo,Urszula

Kanturska,2010-06-07 Not until the recent attacks on transport

systems has transport security become a focus of public concern and academic research. Various aspects of transport security have already been analysed under different agendas. Some research was focused on the potential risk to the environment resulting from transport, in particular from the transport of hazardous or dangerous goods, while other research considered critical elements of transport networks or supply chains as vital lifelines in the case of natural disasters. Recently, new threats stimulated interest in transport security as a stand-alone issue, placing it at the forefront of political and academic agendas. A NATO Advanced Research Workshop held at Imperial College London in January 2009 brought together those with expertise in the above-mentioned fields in order to verify the current state of knowledge in the field and identify promising areas for future work. The workshop concentrated on maritime and intermodal transport, risk management and long-term strategic planning, rather than on the details of monitoring or detection techniques. This collection of papers emanates largely from that workshop. While transport systems are widely recognized as terrorist targets, complete protection of these systems is economically and practically infeasible. The workshop looked at analytical methods to identify critical points in the transport infrastructure and the prioritization of defensive and mitigating measures given the limited resources available. Deficiencies in methods for conducting such an assessment were identified and the need for cost-effective mitigation measures was emphasized.

Scale-Up and Automation in Plant Propagation Indra Vasil,2012-12-02 Scale-Up and Automation in Plant Propagation reviews methods of automation and scale-up of plant propagation in vitro. It looks at the large scale clonal propagation of plants, or micropropagation, as the first major practical application of plant biotechnology. It also discusses the advantages and limitations of micropropagation and evaluates current methods of commercial micropropagation. Organized into 13 chapters, this volume begins with an overview of the benefits of scaling up and automating plant propagation before proceeding with a discussion of synthetic seeds and their use for plant propagation, along with problems and economic considerations associated with synthetic seed technology. It then considers the implementation of somatic embryogenesis technology for clonal forestry, the development and commercialization of bioreactor technology for automated propagation of potato microtubers and lily microbulbs, and approaches to automated propagation of fruit trees. Other chapters focus on issues of cost reduction and development of new products, scale-up and operation of prototype bioreactors for plant propagation, and application of machine vision technology to scale-up and automated evaluation of somatic embryogenesis in sweet potato. The book also describes methods of measurement and control of the environment in culture, environmental factors affecting photosynthesis, and use of robotics and field transplanters in the automation of plant propagation. Scientists and plant breeders will find this book extremely useful.

IFRSs, the standards set by the International Accounting Standards Board (IASB), are complex and sometimes obscure. It is not constrained by any individual country's legislation or financial reporting regulations, and it ensures an international consistency of approach unavailable elsewhere. It shows how difficult practical issues should be approached in the new complex global world of international financial reporting, where IFRSs have become the accepted financial reporting system in more than 120 countries. This integrated approach provides a unique level of authoritative material for anyone involved in preparing, interpreting or auditing company accounts, for regulators, academic researchers and for all students of accountancy. Complex technical accounting issues are explained clearly in a practical working context that enables immediate understanding of the point at issue. International GAAP

2008 is accompanied by numerous worked examples, a comprehensive discussion of the practical issues of the day and the possible alternative solutions available, and hundreds of practical illustrations taken from the actual financial statements of companies that report under IFRSs.
