The Conflict Between Capital and Labor Edgar Torrey Russell, 1912

Underutilised Crop Genomes Mark A. Chapman, 2022-11-03 This book highlights the uses for underutilized crops, presenting the state-of-the-art in terms of genome sequencing for over 30 crops, previously understudied and under-researched. In a changing climate and with significant pressure on the land, it is the ideal time to be discussing novel crops, with significant biotic and abiotic tolerances and/or rich nutrient profiles for consumers. Previously, the only species with sequenced genomes were high-profile internationally recognized crops, but in the current era genomes are being sequenced for dozens of crops, including those previously classified as underutilized, now being investigated. This book covers food crops, from fruits to tubers, and from grasses to legumes, as well as crops with non-food applications. Some of these crops have draft genomes, and others have polished genomes with extensive resequencing panels. Each chapter tells the story of an individual crop or crop group, written by experts, focusing on the genome data available, revealing more about crop domestication and genetic

variation, and the current and future prospects given that this data is now becoming available. It also highlights how even small sequencing projects can provide draft genome sequences suitable for gene discovery, comparative genomics, and identification of molecular markers for understanding these crops further.

Barendse,2009-10-26 Drawing on a vast range of sources Arabian Seas 1700 - 1763 is as much a sweeping overview as a detailed examination of the maritime world of the western Indian Ocean in the eighteenth century. It deals with the various states, economies and societies there and with the impact of the early phase of European colonialism on them.
