*Handbook of Health and Rehabilitation Psychology* Anthony J. Goreczny, 2013-11-11 Despite medical technological advances, the major killers with which we must currently contend have remained essentially the same for the past few decades. Stroke, cancer, and heart disease together account for the vast majority of deaths in the United States. In addition, due to improved medical care, many Americans who would previously have died now survive these disorders, necessitating that they receive appropriate rehabilitation efforts. One result of our own medical advances is that we must now accept the high costs associated with providing quality care to individuals who develop one of these problems, and we must avail ourselves to assist afflicted individuals. families Despite the relative stability of causes of death and disability, the health-care field is currently experiencing tremendous pressures, both from professionals within the field, who desire more and better technology than is currently available, and from the public and other payers of health care (e.g., insurance companies), who seek an end to increasing health-care costs. These pressures, along with an increased emphasis on providing evidence of cost-effectiveness and quality assurance, are substantially changing the way that health-care professionals perform their jobs.

Professional Development for Cooperative Learning Celeste M. Brody, Neil Davidson, 1998-07-10 Cooperative/collaborative learning procedures increasingly attract great attention in school and higher education settings. This book has two main purposes: first, to enable educators to make informed decisions and choices about selecting, implementing, and evaluating cooperative learning models with respect for the differences and diversity of goals among professionals in school communities, and second, to consider the goals of teachers' professional development in the context of organizational reforms that foster systemic school change, such as the development of learning communities. The authors encourage professional development that goes beyond inservice workshops to include multi-year development and support for teachers. They advocate that schools be administered under collaborative principles so teachers can live the experience that they are trying to create in their own classrooms. *Professional Development for Cooperative Learning* describes what works for professional development in cooperative learning and how difficult it is to bring about lasting change in school settings. Brody and Davidson focus the dialogue on the nature of professional development linked to systemic changes and the successes, failures, and challenges encountered in the process.

Business Cycles: Theory and Empirical Methods Willi Semmler, 2012-12-06 In macrodynamics and business cycle analysis we find nowadays a variety of approaches elaborating frameworks for studying the fluctuations in economic and financial data. These approaches are viewed from Keynesian, monetarist and rational expectations standpoints. There are now also numerous empirical methods for the testing of nonlinear data generating mechanisms. This volume brings together a selection of contributions on theories of the business cycle and new empirical methods and synthesizes the new results. The volume (i) gives an overview of current models and modern concepts and tools for analyzing the business cycle; (ii) demonstrates, where possible, the relation of those models to the history of business cycle analysis; and (iii) presents current work, surveys and original work, on new empirical methods of studying cycle generating mechanisms.
