Estimating Fertility from Data on Children Ever Born, by Age of Mother Eduardo E. Arriaga,1983

Age, Time, and Fertility Mary B. Breckenridge,2013-10-22 Age, Time, and Fertility: Applications of Exploratory Data Analysis describes change in the age pattern of fertility that responds to a specific need in making fertility comparisons across time and place. This book discusses a modeling process based on Tukey's exploratory data analysis (EDA) methods, which is proved very effective in other fields for detecting underlying patterns, even in flawed data. The first part of this text provides an introduction to the philosophy and tools of EDA and to the data analyzed, examining in detail the process of developing and standardizing the closely fitting, few-parameter descriptions of demographic change in time sequence. The rest of the chapters examine the results and applications of fertility modeling and establish relations between change in the age pattern of fertility and level of fertility. This publication is intended for those interested in the measures and methods of fertility change that can be applied to demographic data.

Trends and Variations in Fertility in the United States Clyde V. Kiser,Wilson H. Grabill,Arthur A. Campbell,1968 In this third monograph in the American Public Health Association series on vital and health statistics, three of the foremost experts in the field draw on important new sources of data in analyzing patterns of American fertility.The term 'fertility' as used here refers to the actual number of children a woman has borne, rather than her physiological ability to reproduce.

Childbearing Trends and Prospects in Low-Fertility Countries Tomas Frejka,Jean-Paul Sardon,2006-04-11 This is a tour de force in cohort fertility analysis, a deep and powerful piece of work. It is a striking demonstration of the force of really detailed empirical analysis of excellent and comprehensive data, with the data looked at from every angle and judiciously extrapolated into the future. It represents a major contribution to our understanding of contemporary low fertility in Europe and other developed nations... Thomas K. Burch, University of Victoria, BC, Canada

Comparison of Fertility Trends Estimated Alternately from Birth Histories and Own Children Robert D. Retherford,Iqbal Alam,1985 Fertility trends estimated alternately from birth histories and own children method are compared for eight developing countries in which the World Fertility Survey was conducted. Principle hypotheses are that fertility trends estimated by the two approaches suffer from similar errors in the reporting of women's and children's ages, and that these errors are more severe in estimates derived from own children than in estimates derived from birth histories. The hypotheses are confirmed in four of the eight countries. Potter's hypothesis about misplacement of events toward the survey date, which assumes bunching of births five to ten years before the survey and accurate reporting of births during first five years or so immediately preceding the survey, resulting in a spurious estimated fertility decline, does not receive much support from these data. Some of the estimated fertility declines do indeed seem spurious, but Potter's explanation of them seems inconsistent with the data. In some countries, patterns of age misreporting involving upward rounding of children's ages provide an equally plausible explanation that is more consistent with the data. (Author)
