**Appreciative Inquiry Approaches to Organizational Transformation** Bhattacharya, Sudipto, Chakraborty, Tanusree, 2019-12-27 As organizations continue to develop and adapt in today's modern society, various approaches have begun to emerge as managers look for the best techniques to improve company performance. Appreciative inquiry is the practice of maintaining a positive and optimistic environment within the workplace, and it's a concept that has transformed many corporations as it spread across the globe. Understanding this powerful shift in employee perception requires considerable research on how appreciative inquiry is affecting various companies worldwide. *Appreciative Inquiry Approaches to Organizational Transformation* provides emerging research that serves to increase the productivity of individuals and organizations exponentially by sharing case studies from organizations where appreciative inquiry has been implemented successfully as well as best practices that can benefit organizations and common pitfalls that can be avoided by becoming more vigilant. Featuring coverage on a broad range of topics such as individual execution, productivity, and occupational solutions, this book is ideally designed for managers, practitioners, corporate professionals, executives, researchers, educators, and students.

**Current Topics in Cellular Regulation** Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 *Current Topics in Cellular Regulation: Volume 28* is a collection of papers that deals with enzyme-enzyme interactions, regulation of metabolic reaction pathways, the relevance of intracellular amino acid pool in the regulation of protein metabolism, and the production of superoxide by phagocytic leukocytes. Other papers discuss the regulation of adrenergic receptor function by phosphorylation, a membrane-bound metallo-endopeptidase (meprin), as well as the covalent modification as a mechanism of marking proteins for degradation. One paper notes that the transfer pathway involving enzyme-enzyme recognition is associated with molecular specificity features over those demanded by the molecular structural constraints of the individual enzyme sites. The Albery and Knowles principle, under certain conditions, shows that intermediary metabolites within a particular pathway exist in states of nearly equal free energy. One paper describes that the amino acid pool size and content are governed by the conditioning of intracellular proteins and the metabolic activity

of the cell. The paper also suggests that intracellular pools do not regulate protein metabolism. The collection can prove beneficial for biochemists, micro-biologists, cellular researchers, and academicians involved in the study of cellular biology or physiology.
