These leaders can convert their traditional retail branch banks into streamlined systems that deliver personalized services to their customers' laptops, tablets, and smartphones. Written by Sankar Krishnan—a career banker and noted financial services industry thought leader—The Power of Mobile Banking includes strategies for adapting mobile banking practices that suit the needs of both developed and emerging markets. Krishnan also shows how bankers can make their products and services relevant to a new generation of digital natives. Krishnan explores the expanding mobile payment systems that offer a wealth of financial opportunities for banking institutions and includes information on the growth of e-commerce, which holds the potential for new and profitable ways for banks to engage with consumers. The Power of Mobile Banking outlines the practical aspects of adapting to a mobile banking strategy and shows how to put the right players in place to ensure the technology works seamlessly. Once in place, a great mobile system delivers excellent service and benefits to users, as well as real value and unique features that cement customer loyalty. The book also offers advice for bankers who want to increase their bottom line by delving into the world-wide prepaid card market. Krishnan includes a discussion on the risks and hazards of mobile banking and reveals the critical investments that banks must be willing to make in order to avoid losing customers to telecoms, retailers, and technology providers. The time for retail banking to prepare for the new paradigm is now and The Power of Mobile Banking is the guide for professionals who want to adapt, evolve, and succeed in this new mobile-driven world.

**Marketing and Mobile Financial Services** Aijaz A. Shaikh,Heikki Karjaluo,2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

**An Investigation into Authentication Security of GSM algorithm for Mobile Banking** Ali Raheem,2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to asses some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some existing security measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLAB were performed using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.
