Mobile and Ubiquitous Information Access Fabio Crestani,Mark Dunlop,Stefano Mizzaro,2004-01-26 The ongoing migration of computing and information access from the desktop and te- phone to mobile computing devices such as PDAs, tablet PCs, and next-generation (3G) phones poses critical challenges for research on information access. Desktop computer users are now used to accessing vast quantities of complex data either directly on their PC or via the Internet – with many services now blurring that distinction. The current state-of-practice of mobile computing devices, be they mobile phones, hand-held computers, or personal digital assistants (PDAs), is very variable. Most mobile phones have no or very limited information storage and very poor Internet access. Furthermore, very few end-users make any, never mind extensive, use of the services that are provided. Hand-held computers, on the other hand, tend to have no wireless network capabilities and tend to be used very much as electronic diaries, with users tending not to go beyond basic diary applications.

Dissecting the Hack Jayson E Street,2015-07-20 Dissecting the Hack: The V3rb0t3n Network ventures further into cutting-edge techniques and methods than its predecessor, Dissecting the Hack: The F0rb1dd3n Network. It forgoes the basics and delves straight into the action, as our heroes are chased around the world in a global race against the clock. The danger they face will forever reshape their lives and the price they pay for their actions will not only affect themselves, but could possibly shake the foundations of an entire nation. The book is divided into two parts. The first part, entitled The V3rb0t3n Network, continues the fictional story of Bob and Leon, two hackers caught up in an adventure in which they learn the deadly consequence of digital actions. The second part, Security Threats Are Real (STAR), focuses on these real-world lessons and advanced techniques, as used by characters in the story. This gives the reader not only textbook knowledge, but real-world context around how cyber-attacks may manifest. The V3rb0t3n Network can be read as a stand-alone story or as an illustration of the issues described in STAR. Scattered throughout The V3rb0t3n Network are Easter eggs—references, hints, phrases, and more that will lead readers to insights into hacker culture. Drawing on The V3rb0t3n Network, STAR explains the various aspects of reconnaissance; the scanning phase of an attack; the attacker's search for network weaknesses and vulnerabilities to exploit; the various angles of attack used by the characters in the story; basic methods of erasing information and obscuring an attacker's presence on a computer system; and the underlying hacking culture. All new volume of Dissecting the Hack by Jayson Street, with technical edit by Brian Martin Uses actual hacking and security tools in its story – helps to familiarize readers with the many devices and their code Features cool new hacks and social engineering techniques, in real life context for ease of learning

Mobile Marketing Channel Mahmud Akhter Shareef,Yogesh K. Dwivedi,Vinod Kumar,2016-04-23 This book attempts to address, explore, and conceptualize the epistemological paradigms of SMS as an alternative marketing channel or in combination with other existing traditional channels. It promotes a multichannel strategy in the light of synthesized marketing distribution, consumer behavior, and information and communication technology (ICT)-related behavioral theory to develop, establish, and launch a guiding theory and practice for this emerging area. Usage of mobile phones and hand-held wireless devices is growing and diffusing so quickly that 21st century marketing managers find a great potential for this wireless channel to be the most effective media for maintaining a consumer relationship that provides the highest quality service. The emergence of SMS-based direct marketing as a distinct channel or embedded with other channels is characterized by several issues, challenges, barriers, and limitations. This book examines and postulates the following interrelated issues related to wireless marketing (particularly the SMS-based marketing channel): (i) Consumer behavior for mobile phone SMS – perception, exposure, and attention; (ii) Consumer attitudes toward SMS-based marketing channels; (iii) The scope of SMS to meet consumer service output demands from an online channel; (iv) Consumer selection criteria for mobile phone SMS channel structure; (v) Mobile channel structure as an efficient and effective consumer interaction mode; and (vi) Consumer multichannel behavior. It is important to use the SMS-based mobile channel as a radical tool of

interactive marketing and seamless service marketing, as there is the opportunity to maximize, until now, unutilized benefits of this efficient and popular direct marketing channel.
