*Wildland Fire Management* United States. Government Accountability Office,2008 Wildland fires have become increasingly damaging and costly. To deal with fire's threats, the five federal wildland fire agencies--the Forest Service in the Department of Agriculture and four agencies in the Department of the Interior (Interior)--rely on thousands of firefighters, fire engines, and other assets. To ensure acquisition of the best mix of these assets, the agencies in 2002 began developing a new interagency budget tool known as fire program analysis (FPA). FPA underwent major changes in 2006, raising questions about its ability to meet its original objectives. GAO was asked to examine (1) FPA's development to date, including the 2006 changes, and (2) the extent to which FPA will meet its objectives. To do so, GAO reviewed agency policies and FPA documentation and interviewed agency officials.

**Severe Wildland Fires** United States. General Accounting Office,2002 Dangerous accumulations of brush, small trees, and other vegetation on federal lands, particularly in the western United States, have helped fuel devastating wildfires in recent years. Although a single focal point is critical for directing firefighting efforts by federal, state, and local governments, GAO found a lack of clearly defined leadership at the federal level. Authority and responsibility remain fragmented among the Department of the Interior, the Forest Service, and the states. Implementation of a performance accountability network also remains fragmented. As a result, GAO could not determine if the \$796 million earmarked for hazardous fuels reduction in 2001 and 2002 has been targeted to communities and areas at highest risk. The five federal land management agencies--the National Park Service, the Fish and Wildlife Service, the Bureau of Land Management, the Bureau of Indian Affairs, and the Forest Service--have yet to begin the research needed to identify and prioritize vulnerable communities near high-risk federal lands. Moreover, the agencies are not collecting the data needed to determine if changes are needed to expedite the project-planning process. They also are not collecting data needed to measure the effectiveness of efforts to dispose of the large amount of brush and other vegetation on federal lands.

This volume examines the emerging problems encountered by public agencies in responding to demands for increased accountability in their conduct of other people's business.
