Byron Preiss

Dragonworld Byron Preiss, 2009-02-02 “Dragonworld goes far beyond the flashy pyrotechnics of contemporary fantasy and fantasy illustration. Joe Zucker is a superlative and original illustrator, and he reveals a rare and astonishing gift for infusing a richness of character into his pictures, which do justice to Byron Preiss's and Michael Reaves's compelling story.” —Maurice Sendak “Until now, there have been only two real grandmasters of modern epic fantasy—J.R.R. Tolkien and Ann McCaffrey. With the team of Preiss and Reaves, there are three, and may they write and write and write.” —United Press International Somewhere beyond the northern mists lies a land where dreams live and dragons are real. This is the tale of the twilight of the dragons, of two nations plunged into war by a tragic misunderstanding, of a shy dreamer's incredible voyage of peace to a long-forgotten land where nightmares are born. A magnificent creation, a sweeping epic of high fantasy set in a richly imagined world, vividly brought to life with over eighty pages of stunning illustrations by Joseph Zucker.

The Solar System Thérèse Encrenaz, Jean-Pierre Bibring, M. Blanc, 2013-03-09 Since the first edition of this book appeared in 1990, planetology has seen a number of fascinating discoveries that have increased our knowledge of the Solar System. These have come from both ground- and space-based observational programmes. Although some space probe missions have ended in failure, even they have added to our store of information about the planetary environment. The Galileo probe, despite being crippled by its incompletely deployed main antenna, has already achieved some spectacular results. For the first time we have obtained pictures of asteroids, with the images that Galileo returned of Gaspra, Ida, and the latter's satellite, Dactyl. The main objective, the dropping of an instrumented capsule into Jupiter's atmosphere, and prolonged in-situ investigation of the planet, will take place at the end of 1995. Saturn's turn will come early in the next century with the Cassini mission (to be launched in 1997), which will study the planet for an extended period and attempt to land the Huygens probe on the surface of Titan. NASA's Magellan mission proved to be a great success, with its highly detailed radar mapping of the surface, and atmospheric studies. The exploration of Mars was less fortunate with the failure of both spaceprobes of the Soviet Phobos mission, as well as NASA's Mars Observer probe. Despite this setback, plans are in hand for future, collaborative exploration of the planet, using both surface stations (possibly active rovers), surface penetrators and balloon probes, as well as orbiters.
