Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome Institute of Medicine, Board on the Health of Select Populations, Committee on the Diagnostic Criteria for Myalgic Encephalomyelitis/Chronic Fatigue Syndrome, 2015-03-16 Myalgic encephalomyelitis (ME) and chronic fatigue syndrome (CFS) are serious, debilitating conditions that affect millions of people in the United States and around the world. ME/CFS can cause significant impairment and disability. Despite substantial efforts by researchers to better understand ME/CFS, there is no known cause or effective treatment. Diagnosing the disease remains a challenge, and patients often struggle with their illness for years before an identification is made. Some health care providers have been skeptical about the serious physiological - rather than psychological - nature of the illness. Once diagnosed, patients often complain of receiving hostility from their health care provider as well as being subjected to treatment strategies that exacerbate their symptoms. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome proposes new diagnostic clinical criteria for ME/CFS and a new term for the illness - systemic exertion intolerance disease (SEID). According to this report, the term myalgic encephalomyelitis does not accurately describe this illness, and the term chronic fatigue syndrome can result in trivialization and stigmatization for patients afflicted with this illness. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome stresses that SEID is a medical - not a psychiatric or psychological - illness. This report lists the major symptoms of SEID and recommends a diagnostic process. One of the report's most important conclusions is that a thorough history, physical examination, and targeted work-up are necessary and often sufficient for diagnosis. The new criteria will allow a large percentage of undiagnosed patients to receive an accurate diagnosis and appropriate care. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome will be a valuable resource to promote the prompt diagnosis of patients with this complex, multisystem, and often devastating disorder; enhance public understanding; and provide a firm foundation for future improvements in diagnosis and treatment.

Organizational Innovation and IT Governance in Emerging Economies Zhao, Jingyuan,2014-11-30 As technology grows as the largest source of modern economic growth, the emergence of new models is currently challenging the standard western model of organizational management. Companies from all over the world have succeeded in creating emerging economies with these new models and are now competing with established multinational corporations. Organizational Innovation and IT Governance in Emerging Economies develops a methodological framework that supports new approaches of technological innovation by companies. This reference book provides contributions from experts in emerging economies, highlighting specific case studies of home grown companies from these emerging markets, offering lessons on how traditional multinationals can compete with these new companies for policymakers, government officers, academics, researchers, students, and practitioners.

States and Markets in Hydrocarbon Sectors Andrei V. Belyi,Kim Talus,2015-01-20 Research on the role of states and markets in the hydrocarbon sector is highly topical in contemporary International Political Economy. This edited collection will approach this subject from a broader perspective, investigating the very essence of the interaction between the state and the market and how this varies on a regional basis.

Redress Schemes for Personal Injuries Sonia Macleod,Christopher Hodges,2017-11-30 This ground-breaking book takes a fresh look at potential non-litigation solutions to providing personal injury compensation. It is the first systematic comparative study of such a large number – over forty – of personal injury compensation schemes. It covers the drivers for their creation, the frameworks under which they operate, the criteria and thresholds used, the compensation offered, the claims process, statistics on throughput and costs, and analysis of financial costings. It also considers and compares the successes and failings of these schemes. Many different types of redress providers are studied. These include the comprehensive no-blame coverage offered by the New Zealand Accident Compensation Corporation; the widely used Patient, Pharmaceutical, Motor Accident and Workers Compensation Insurance systems of the Nordic states; the far smaller issue-focused schemes like the UK Thalidomide and vCJD Trusts; vaccine damage schemes that exist in many countries; as well as motor vehicle schemes from the USA. Conclusions are drawn about the functions, essential requirements, architecture, scope, operation and performance of personal injury compensation systems. The relationships between such schemes, the courts and regulators are also discussed, and both calls and need for reforms are noted. Noting the wide calls for reform of NHS medical negligence litigation within the UK, and its replacement with a no blame approach, the authors' findings outline options for future policy in this area. This major contribution

builds on general shifts from courts to ADR, and from blame to no blame in regulation, and is a work that has the potential to have a major impact on the field of personal injury redress. With contributions by Raymond Byrne, Claire Bright, Shuna Mason, Magdalena Tulibacka, Matti Urho, Mary Walker and Herbert Woopen.

A Smarter, Greener Grid Kevin B. Jones, David Zoppo, 2014-05-12 The pressing need for a smarter and greener grid is obvious, but how this goal should be achieved is much less clear. This book clearly defines the environmental promise of the smart grid and describes the policies necessary for fully achieving the environmental benefits of the digital energy revolution. The United States' electrical grid is an antique. It was built to serve a 20th-century economy and designed in an era when the negative environmental impacts of electricity production were poorly understood. It must be upgraded and modernized. The proposed solution is a smart grid—a network of new digital technologies, equipment, and controls that can respond quickly to the public's changing energy needs by facilitating two-way communication between the utility and consumers. This book explains the environmental benefit of a smart grid, examines case studies of existing smart grids, and identifies the legal and regulatory policy hurdles that must be overcome to fully realize the smart grid's benefits. Based on six diverse organizations' experience as early adopters in the digital energy revolution, the authors explore how a smart electric grid offers real promise for supercharging energy efficiency, democratizing demand response, electrifying transportation, preparing for ubiquitous distributed clean energy technologies, and automating the distribution system. Against the backdrop of climate change and continuing economic uncertainty, setting a path for environmental improvement and upgrading our electric grid with new digital technologies and associated smart policies is more critical than ever before.
