Fitness for Work John Hobson, Julia Smedley, 2019-02-14 The 'bible' of occupational health, *Fitness for Work* is the most in-depth and comprehensive resource available on the relationship between ill health and employment. The specialist advice given covers health hazards in the work place, fitness for work, and rehabilitation after illness or injury. A truly current source, it discusses the social aspects of work, and problems associated with our ageing workforce and changing population. Communicating occupational health advice to patients, employees, and doctors, *Fitness for Work* improves relationships in the workplace. It details the impact of a patient's health on work, and how they can be supported to gain or remain in employment. This invaluable source argues that in a suitable role, an employee can derive immense benefits to their health and well-being from work. Importantly, this comprehensive title also presents tactics on how to reduce inappropriate barriers to work for those who have overcome an injury or disease, and those who live with chronic conditions. Fully revised and updated, the sixth edition of *Fitness for Work* is based on the latest research evidence and clinical advances. The first half of the book focuses on the general principles of fitness to work and occupational health practice, such as legal aspects, ethical principles, health promotion, health surveillance and general principles of rehabilitation. For effortless reference, each specialty chapter outlines the conditions covered, their prevalence and impact, and discusses the clinical aspects and treatment that affects work capacity. All recommendations are evidence-based and make use of the NICE guidelines. The definitive text on the relationship between health and work, *Fitness for Work* delivers a wealth of valuable consensus guidance, codes of practice, and locally evolved standards. This highly-regarded resource is essential for all occupational health practitioners.

Research Anthology on Decision Support Systems and Decision Management in Healthcare, Business, and Engineering Management Association, Information Resources, 2021-05-28 Decision support systems (DSS) are widely touted for their effectiveness in aiding decision making, particularly across a wide and diverse range of industries including healthcare, business, and engineering applications. The concepts, principles, and theories of enhanced decision making are essential points of research as well as the exact methods, tools, and technologies being implemented in these industries. From both a standpoint of DSS interfaces, namely the design and development of these technologies, along with the implementations, including experiences and utilization of these tools, one can get a better sense of how exactly DSS has changed the face of decision making and management in multi-industry

applications. Furthermore, the evaluation of the impact of these technologies is essential in moving forward in the future. The Research Anthology on Decision Support Systems and Decision Management in Healthcare, Business, and Engineering explores how decision support systems have been developed and implemented across diverse industries through perspectives on the technology, the utilizations of these tools, and from a decision management standpoint. The chapters will cover not only the interfaces, implementations, and functionality of these tools, but also the overall impacts they have had on the specific industries mentioned. This book also evaluates the effectiveness along with benefits and challenges of using DSS as well as the outlook for the future. This book is ideal for decision makers, IT consultants and specialists, software developers, design professionals, academicians, policymakers, researchers, professionals, and students interested in how DSS is being used in different industries.

Decision Support for Team Staffing Jochen Malinowski, 2012-02-24 How can the

selection of individuals to configure teams be improved with the help of information technology? Due to organizational trends, team-based work structures gain importance and increase the demand for staffing highly effective teams. However, existing human resource management systems have often not yet been adapted to support HR decision makers in this task and IS support for team staffing is rather scarce. Existing systems only consider whether a person has the required technical skills and abilities for a job. Those systems (1) are not able to capture the latent aspects that typically underlie personnel selection decisions, (2) do not consider candidate preferences and (3) especially neglect to consider the match between the person and the team members in terms of interpersonal compatibility. This book presents a decision support system based on an automated recommendation approach for providing a pre-selection of candidates that fit best with a specific job and with future team members. The system contributes to literature by proposing an IS-supported approach for the selection of individuals for teams and to practice by offering time and cost savings for HR professionals.

Proceedings of the 6th International Conference on Decision Support System Technology – ICDSSST 2020 on Cognitive Decision Support Systems & Technologies

Isabelle Linden, Alberto Turón, Fatima Dargam, Uchita Jayawickrama, 2021-05-27

Intelligent Decision Support Methods Vasant Dhar, Roger Stein, 1997 This is a comprehensive explanation of how powerful technologies work in business,

using a pragmatic business approach in describing when and how they should be used. Marketing Management Support Systems Berend Wierenga, Gerrit van Bruggen, 2012-12-06 Marketing management support systems are designed to make marketing managers more effective decision makers in this electronic era. Developments in information technology have caused a marketing data explosion, but have also provided a powerful set of tools that can transform this data into applicable marketing knowledge. Consequently, companies are making major investments in such marketing decision aids. This book is the first comprehensive, systematic textbook on marketing management support systems. The basic issue is the question of how to determine the most effective type of support for a given marketing decision maker in a particular decision situation. The book takes a demand-oriented approach. Decision aids for marketing managers can only be effective if they match with the thinking and reasoning process of the decision makers who use them. Consequently, the important questions addressed in this book are: how do marketing managers make decisions; how can marketing management support systems help to overcome several (cognitive) limitations of human decision makers; and what is the most appropriate type of management support system

for assisting the problem-solving methods employed by a marketing decision-maker?

Decision Support Systems for Sustainable Development Gregory E.

Kersten, Zbigniew Mikolajuk, Anthony Gar-On Yeh, 2007-05-08 In recent years, much work has been done in formulating and clarifying the concept of sustainable development and related theoretical and research issues. Now, the challenge has shifted to designing and stimulating processes of effective planning and decision-making, at all levels of human activity, in such a way as to achieve local and global sustainable development. Information technology can help a great deal in achieving sustainable development by providing well-designed and useful tools for decision makers. One such tool is the decision support system, or DSS. This book explores the area of DSS in the context of sustainable development. As DSS is a very new technique, especially in the developing world, this book will serve as a reference text, primarily for managers, government officials, and information professionals in developing countries. It covers the concept of sustainable development, defines DSS and how it can be used in the planning and management of sustainable development, and examines the state of the art in DSS use. Other interested readers will include students, teachers, and analysts in information sciences; DSS designers, developers, and implementors; and international development agencies.
