This gives the reader a deeper understanding of how ActionScript functions, and gives them the power to come up with original solutions when creating their own projects. Doug's book dives right into the concepts of manipulating Flash objects and the fundamentals of functions and mathematical operators. After presenting events and using scripts to control the Flash timeline, classes and conditionals are covered in depth. The final part of the book covers creating desktop applications with Adobe AIR, developing mobile applications, and working with external code libraries. Your inner programmer is telling you that no OOP is a big Oops! Any Flash developer can share similar tales of woe. This book breaks down the process of Flash game development into simple, approachable steps. Never heard of a game loop before? No idea what a design pattern is? No problem! Chris Griffith gives you real-world expertise, and real-world code that you can use in your own games. Griffith has been building games in Flash long enough to know what works and what doesn't. He shows you what you need to know to get the job done. Griffith covers Flash for the everyday developer. This book helps bridge the gap for these coders who may be used to C++, Java, or C# and want to move over to Flash. Griffith covers real-world scenarios pulled from his own experiences developing games for over 10 years in the industry. The 2nd edition will include: completely new game examples on more advanced topics like 3D; more robust physics and collision detection; and mobile device coverage with Android platform development for us on phones and tablets. Also coverage of the new features available in Flash CS5, Flash Player 10.1, and AIR 2.0 that can be used for game development.
