Flash Flood Forecasting Over Complex Terrain National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee to Assess NEXRAD Flash Flood Forecasting Capabilities at Sulphur Mountain, California, 2005-01-28 The nation's network of more than 130 Next Generation Radars (NEXRADs) is used to detect wind and precipitation to help National Weather Service forecasters monitor and predict flash floods and other storms. This book assesses the performance of the Sulphur Mountain NEXRAD in Southern California, which has been scrutinized for its ability to detect precipitation in the atmosphere below 6000 feet. The book finds that the Sulphur Mountain NEXRAD provides crucial coverage of the lower atmosphere and is appropriately situated to assist the Los Angeles-Oxnard National Weather Service Forecast Office in successfully forecasting and warning of flash floods. The book concludes that, in general, NEXRAD technology is effective in mountainous terrain but can be improved.

Severe Thunderstorms and Tornadoes in the United States Peter Folger, 2011-04-10 Severe thunderstorms and tornadoes affect communities across the U.S. every year, causing fatalities, destroying property and crops, and disrupting businesses. Tornadoes are the most destructive products of severe thunderstorms. Damages from violent tornadoes seem to be

increasing, similar to the trend for other natural hazards in part due to changing population, demographics, and more weather-sensitive infrastructure and some analysts indicate that losses of \$1 billion or more from single tornado events are becoming more frequent. Insurance industry analysts state that tornadoes, severe thunderstorms, and related weather events have caused nearly 57%, on average, of all insured catastrophe losses in the U.S. in any given year since 1953. Contents of this report: (1) Overview; (2) Issues for Congress: A Focus on Local Warnings and Forecasts for the National Weather Service; Mitigation: The National Windstorm Impact Reduction Program; Reauthorizing the National Windstorm Impact Reduction Program; Climate Change and Severe Weather: The April and May 2011 Tornadoes: A Link to Climate Change?; Other Factors Contributing to Risk From Tornadoes; Forecasting and Warning: The Role of the National Weather Service; Summary and Conclusions; Appendix: Risk from Severe Thunderstorms and Tornadoes. Map and tables. This is a print on demand report.

Understanding Severe and Unusual Weather Joe R. Eagleman, 2021-01-04 An understanding of severe and unusual weather should be a fundamental part of everyone's storehouse of knowledge. We live in a world that is at least occasionally dominated by severe and unusual weather. Many types of severe weather are sufficiently rare that a common defense mechanism of many people is to assume that they will never be directly affected. However, there is

hardly a place in the whole world that does not have some peculiar aspect of weather that requires some degree of understanding and preparedness in order to avoid loss of property and, perhaps, even life itself. Fortunately, no particular location has all the different kinds of unusual and severe weather; thus, coastal areas are exposed to the tremendous power of the hurricane that bring high winds and frequently produce flood conditions, while within the interior United States, where hurricanes are not a threat, such severe types of weather as tornadoes, hailstorms, and blizzards are sufficiently frequent that an understanding of these storms is essential when traveling or living in this part of the United States. Although lightning is a greater hazard in some parts of the world than others, there are very few locations, including Alaska and the Desert Southwest, where occasional severe thunderstorms do not develop numerous lightning strokes. A proper understanding is important for flash flooding, derechos, mountainadoes, haboobs and other unusual weather. People have different responses to everyday weather from resistant to feeling dominated by it. You can find your level of response from a self test that is provided.

Flash Floods Kevin Sene,2012-12-14 Flash floods typically develop in a period a few hours or less and can arise from heavy rainfall and other causes, such as dam or flood defence breaches, and ice jam breaks. The rapid development, often associated with a high debris content, can present a considerable risk to people and property. This book describes recent developments in techniques for monitoring and forecasting the development of flash floods, and providing flood warnings. Topics which are discussed include rainfall and river monitoring, nowcasting, Numerical Weather Prediction, rainfall-runoff modelling, and approaches to the dissemination of flood warnings and provision of an emergency response. The book is potentially useful on civil engineering, water resources, meteorology and hydrology courses (and for post graduate studies) but is primarily intended as a review of the topic for a wider audience.

Restless Skies Paul Douglas,2007 Improved technology is teaching us more about the weather all the time, and with new knowledge comes new concerns and confusion. Is global warming real? What is a NEXRAD Doppler? Meteorologist Paul Douglas provides the answers to all these questions and more, along with fascinating illustrations, photos, trivia, and graphics. Find out what a difference a degree makes; as well as information about El Niño and how to protect yourself against the worst that the weather can bring. From the distinctions between a weather warning, watch, and advisory to the definition of an F-5 tornado, all the essentials are clearly explained.

Watch out . . . storms ahead! : owlie skywarn's weather book Rick Leach,2008-05 This activity book will help children learn more about dangerous weather. The warnings in this book may keep you, your family & pets alive! Weather can be calm & peaceful. It also can be violent & dangerous. Each year hundreds of people are killed by severe storms such as tornadoes, hurricanes & flash floods. But if people paid attention to NOAA's National Weather Service warnings, they would be much safer. Contents: Hurricanes; Tornadoes; Lightning; Floods; Winter Storms; & Weather Quizzes.
