📖 **FlickR Hacks** PAUL BAUSCH,JIM BUMGARDNER,2006-02-21 Over two million registered Flickr users and counting have discovered the ease and fun of organizing their photo libraries, showing off their favorite pictures to the world, and securely sharing their private pictures with friends, family, or ad hoc groups. But Flickr's own plethora of intuitive menus, options, and features just scratches the surface. Flickr Hacks goes beyond the basics of storing, sorting, and sharing your photos to the much bigger playground of what's possible. Whether you're a beginner looking to manage your metadata and play with tags, or a programmer in need of a detailed reference of Flickr API methods, you'll find what you're looking for here. In addition to getting under the hood of some of the most popular third-party Flickr toys already in the wild, you'll learn how to: Post photos to your blog directly from your cameraphone Mash up your own photos or others' public pictures into custom mosaics, collages, sliding puzzles, slideshows, or ransom notes Back up your Flickr library to your desktop, and save the comments too Set random desktop backgrounds and build your own Flickr screensaver Geotag your photos and map your contacts Download a list of photos and make a contact sheet Make your own Flickr-style tag cloud to visualize the frequency of common tags Build a color picker with a dynamic color wheel of Flickr photos Feed photos to your web site and subscribe to custom Flickr feeds using RSS Talk to the Flickr API using your web browser, Perl, or PHP; authenticate yourself and other users; and build custom API applications

📖 **Pro Web 2.0 Mashups** RAYMOND YEE,2008-04-25 Mashups are hugely popular right now, a very important topic within the general area of Web 2.0, involving technologies such as CSS, JavaScript, Ajax, APIs, libraries, and server-side languages (such as PHP and ASP.NET.) This book aims to be the definitive tome on mashup development, to stand in the middle of all the other, more API specific books coming out on Google Maps, Flickr, etc. The book shows how to create real world mashups using all the most poplar APIs, such as Google Maps, Flickr, Amazon Web Services, and Delicious, and includes examples in multiple different server-side languages, such as PHP, Java, and .NET.

📖 **Folksonomies. Indexing and Retrieval in Web 2.0** ISABELLA PETERS,2009-12-23 In Web 2.0 users not only make heavy use of col-laborative information services in order to create, publish and share digital information resources - what is more, they index and represent these re-sources via own keywords, so-called tags. The sum of this user-generated metadata of a collaborative information service is also called folksonomy. In contrast to professionally created and highly struc-tured metadata, e.g. subject headings, thesauri, clas-sification systems or ontologies, which are applied in libraries, corporate information architectures or commercial databases and which were developed according to defined standards, tags can be freely chosen by users and attached to any information resource. As one type of metadata folksonomies provide access to information resources and serve users as retrieval tool in order to retrieve own re-sources as well as to find data of other users. The book delivers insights into typical applications of folksonomies, especially within collaborative information services, and discusses the strengths and weaknesses of folksonomies as tools of knowl-edge representation and information retrieval. More-over, it aims at providing conceptual considerations for solving problems of folksonomies and presents how established methods of knowledge representa-tion and models of information retrieval can successfully be transferred to them.

📖 **Unleashing Web 2.0** GOTTFRIED VOSSEN,STEPHAN HAGEMANN,2010-07-28 The emergence of Web 2.0 is provoking challenging questions for developers: What products and services can our company provide to customers and employees using rich internet applications, mash-ups, web feeds or Ajax? Which business models are appropriate and how do we implement them? What are best practices and how do we apply them? If you need answers to these and related questions, you need Unleashing Web 2.0—a comprehensive and reliable resource that guides you into the emerging and unstructured landscape that is Web 2.0. Gottfried Vossen is a professor of information systems and computer science at the University of Muenster in Germany. He is the European Editor-in-Chief of Elsevier's Information Systems—An International Journal. Stephan Hagemann is a PhD. student in Gottfried's research group focused on web technologies. Presents a complete view of Web 2.0 including services and technologies Discusses potential new products and services and the technology and programming ability needed to realize them Offers 'how to' basics presenting development frameworks and best practices Compares and contrasts Web 2.0 with the semantic web

📖 **My Our Life in Web Apps** GILES TURNBULL,2006-06-21 What is a web app? It's software that you use right in your web browser. Rather than installing an application on your computer, you visit a web site and sign up as a new user of its software. Instead of storing your files on your own hard disk, the web app stores them for you, online. Is it possible to switch entirely to web apps? To run nothing but a browser for an entire day? In this PDF we'll take you through one day in the life of a web apps-only user and chronicle the pros and cons of living by browser. And if the idea of switching, fully or partially, to web apps sounds appealing to you, we also take care of the job of investigating which web apps to use. The immediate benefit of living by web apps is their accessibility: you can use almost any computer, anywhere, to retrieve your data. If you habitually switch between several computers of your own, web apps keep everything in sync and make version control simple. But there are also drawbacks to overcome: Can you trust web apps? Can you back them up? In this PDF we'll also address practicality, security issues, and backup strategies for living the web app life. Is it really possible? This PDF will help you decide.

Web Development Solutions Christian Heilmann,Mark Norm Norman Francis,2007-05-25 As a web user, you’ll no doubt have noticed some of the breathtaking applications available in today’s modern web, such as Google Maps and Flickrdesktop applications than the old style web sites you are used to. You’ve probably also wished that you could create such things, and then thought nahhhh, I’d need to know a lot of complicated code to be able to even start creating sites like these. Well, think again. There is a lot of complicated code involved in cutting-edge Ajax-style web applications, but a lot of the hard work is already done for you, and available on the web. JavaScript libraries exist to provide most of that Ajax/DOM scripting functionality out of the box. Application programming interfaces (APIs) exist to allow you to transplant complicated applications such as Google Maps and Flickr right into your own web sites. And hosting services such as Flickr and YouTube provide all you need to store and retrieve your media (be it images, video, or whatever) at your leisure, without having to worry about bandwidth issues and file naming nightmares. All you need to know is enough to successfully wire together all this functionality successfully and responsibly, and this book shows you how. It starts from the very beginning of your journey, showing you what’s available, what you need, and how to set up an effective development environment. After a solid base has been built, it shows you how to build up each aspect of your site, including storing, retrieving, and displaying content, adding images and video to your site, building effective site navigation and laying it all out beautifully using CSS, promoting your content so you will attract visitors to your site, and adding special effects to enhance usability and design aesthetics...all with ready-made functionality available on the web! Life as a web developer has never been easier.
