A recording device—have everyone you contact today write their name in the book. An instrument—create as many sounds as you can using the book, like flipping the pages fast or slapping the cover. This Is Not a Book forces you to ask, “If it’s not a book, what is it then?”—with a kaleidoscope of possible answers.

Flip the Funnel Joseph Jaffe, 2010-01-26 Why customer retention is the new acquisition If there's anything the recession of 2009 taught us, it was the importance of investing in our customers, but when was this any different? So says Joseph Jaffe, bestselling author of *Life After the 30-Second Spot* and *Join the Conversation*, and a leading expert and thought leader on new media and social media. In most businesses, it costs roughly five-to-ten times more to acquire a new customer than it does to retain an existing one, and yet companies continue to disproportionately spend their budgets into the wrong end of the funnel – the mass media or awareness side. What we haven't paid enough attention to is the right end of the funnel-the word-of-mouth component that essentially acts as a multiplier for future business. The economic impact of an active, engaged and loyal customer is tremendous. And the same is true of the opposite scenario, namely the impact of angry customers and negative word-

of-mouth or referrals. It is this thinking that Jaffe has channeled to challenge marketers to flip the funnel once and for all. With a renewed focus and energy on customer experience, it is possible to grow your sales, while decreasing your budget – in other words, getting more from less. Engaging a few customers to spread the word to many. Using this new flipped funnel model, together with a set of new rules of customer service and a revolutionary customer referral and activation process, you'll learn how to transform your existing customers into your best salespeople. In addition, Jaffe will explain how to best introduce and combine both digital and social media tools to boost your loyalty arsenal, deploy influencer marketing and implement word-of-mouth strategies that inspire your loyal, opinionated, and most vocal customers to become credible, persuasive, and influential endorsers of your products and services. Explains how to cut your marketing budget AND grow sales! Illustrates practical ways to use existing customers to reach out to new prospects Outlines the authentic role of social media Demonstrates key ideas with rich, real life examples including Comcast, Apple, The Obama Campaign, Dell, Panasonic, American Airlines, Delta Airlines, Johnson & Johnson, Coca-Cola and many, many more Written by one of the most sought-after consultants, keynote speakers, and thought-leaders on new marketing change and innovation; renowned blogger and podcaster at Jaffe Juice (www.jaffejuice.com) and host/presenter of web video show, JaffeJuiceTV (www.jaffejuice.tv) Visit www.flipthefunnelnow.com to join the conversation.

A Computer-Assisted Analysis System for Mathematical Programming Models and Solutions H.J. Greenberg, 2012-12-06 Welcome to ANALYZE, designed to provide computer assistance for analyzing linear programs and their solutions. Chapter 1 gives an overview of ANALYZE and how to install it. It also describes how to get started and how to obtain further documentation and help on-line. Chapter 2 reviews the forms of linear programming models and describes the syntax of a model. One of the routine, but important, functions of ANALYZE is to enable convenient access to rows and columns in the matrix by conditional delineation. Chapter 3 illustrates simple queries, like DISPLAY, LIST, and PICTURE. This chapter also introduces the SUBMAT command level to define any submatrix by an arbitrary sequence of additions, deletions and reversals. Syntactic explanations and a schema view are also illustrated. Chapter 4 goes through some elementary exercises to demonstrate computer assisted analysis and introduce additional conventions of the ANALYZE language. Besides simple queries, it demonstrates the INTERPRT command, which automates the analysis process and gives English explanations of results. The last 2 exercises are diagnoses of elementary infeasible instances of a particular model. Chapter 5 progresses to some advanced uses of ANALYZE. The first is blocking to obtain macro views of the model and for finding embedded substructures, like a netform. The second is showing rates of substitution described by the basic equations. Then, the use of the REDUCE and BASIS commands are illustrated for a variety of applications, including solution analysis, infeasibility diagnosis, and redundancy detection.
