Floating Images Eduardo Souto de Moura,2012 Photographs, newspaper cuttings, postcards, drawings, and slides: on entering the studio of Eduardo Souto de Moura, winner of the Pritzker Prize 2011, one is confronted with a variety of images on the walls that engage in a dialogue. How do these photos, drawings, and illustrations impact his design practice? What is the relationship between the image and the completed building? Floating Images: Eduardo Souto de Moura's Wall Atlas uses this question as an opportunity to examine the architect's visual universe. He has added images from his extensive collection of drawings and project sketches and reorganized them in this atlas. Complex relationships are formed between the individual illustrations and projects. Essays by Pedro Bandeira, Eduardo Souto de Moura, Diogo Seixas Lopes, and Philip Ursprung round off the publication and provide a contextualization in terms of the history of art and images.

  <u>Performing Image</u> Isobel Harbison,2019-04-09 An examination of how artists have combined performance and moving image for decades, anticipating our changing relation to images in the internet era. In Performing Image, Isobel Harbison examines how artists have combined performance and moving image in their work since the 1960s, and how this work anticipates our changing relations to images since the advent of smart phones and the spread of online prosumerism. Over this period, artists have used a variety of DIY modes of self-imaging and circulation—from home video to social media—suggesting how and why Western subjects might seek alternative platforms for self-expression and self-representation. In the course of her argument, Harbison offers close analyses of works by such artists as Robert Rauschenberg, Yvonne Rainer, Mark Leckey, Wu Tsang, and Martine Syms. Harbison argues that while we produce images, images also produce us—those that we take and share, those that we see and assimilate through mass media and social media, those that we encounter in museums and galleries. Although all the artists she examines express their relation to images uniquely, they also offer a vantage point on today's productive-consumptive image circuits in which billions of us are caught. This unregulated, all-encompassing image performativity, Harbison writes, puts us to work, for free, in the service of global corporate

expansion. Harbison offers a three-part interpretive framework for understanding this new proximity to images as it is negotiated by these artworks, a detailed outline of a set of connected practices—and a declaration of the value of art in an economy of attention and a crisis of representation.

The Vast Design Edward Engelberg,1964-12-15 In recent years Yeats has been receiving a great deal of critical attention from many aspects. Professor Engelberg here makes a distinctive contribution to the new studies by bringing under discussion the kind of aesthetic views developed by Yeats in order to rationalize his own practice as poet and dramatist. Yeats was pragmatic in his approach and therefore not concerned about formulating a tight critical theory. Recognizing this, the author at the same time skilfully guides the reader through the opinions expressed in the critical essays to meaningful patterns and shows how Yeats's aesthetic views developed, often in relation to his study of Balzac, Blake, Spenser, Shelley,

Morris, and the Irish theatre of his own day. Throughout the stress is fittingly on the originality of Yeats, and the reader will be impressed always with his great critical perceptiveness.

Float Daniel Miyares,2015-06-09 A boy's small paper boat—and his large imagination—fill the pages of this wordless picture book, a modern-day classic from the creator of Pardon Me! that includes endpaper instructions for building a boat of your own. A little boy takes a boat made of newspaper out for a rainy-day adventure. The boy and his boat dance in the downpour and play in the puddles, but when the boy sends his boat floating down a gutter stream, it quickly gets away from him. So of course the little boy goes on the hunt for his beloved boat—and when the rain lets up, he finds himself on a new adventure altogether. This seemingly simply story from Daniel Miyares is enriched with incredible depth and texture that transcend words.

Morphological Image Processing: Architecture and VLSI design P.P. Jonker,1992 This book describes image processing research based on the morphology of the objects in an image and a VLSI design of a Cellular Logic Processing Element for a real-time processor pipeline. The field of image processing has spawned a number of special parallel computer architectures: the Square (SIMD), Processor Array, the Pyramid, the Linear Processor Array (or scan line array) and the Processor Pipeline. This book features a classification of low-level image processing operations, reviews some intermediate level algorithms, and gives a short introduction into computer

architecture used for image and digital signal processing. Morphology-based processing images is introduced by treating cellular logic operations such as skeletonization as hit-or-miss transformations. This approach can be extended to images of higher dimensions than two and a method is described to construct hit-or-miss masks for the skeletonization of these images. In the second part of the book a study is performed on the speed bottlenecks that can be found in the main architectural groups followed by the description of a method for the structured design of integrated, digital hardware. The VLSI design of a CMOS Processing Element for the real-time processing of binary images and the board level design of a scalable processor pipeline for a real-time low-level processing of grey value images is described in detail. Finally, a computer architecture for low and intermediate processing of two and three dimensional images if proposed.
