**SPORTS METRIC FORECASTING** William Mallios,2014-07-29 Outcomes of major league games—winning/losing margins and total points scored relative to the odds makers’ lines in baseball, basketball and football—are graphed in terms of sports metric candlestick charts and then forecast in terms of adaptive drift modeling. The charts are constructed to reveal ad hoc forecasting patterns that may contribute to effective forecasting. These patterns are then included with variables contained in major sports data bases. The augmented data bases then provide input variables in the drift modeling forecasts.

The Football Code James Tippett,2017-09-06 The Football Code outlines an innovative, ground-breaking philosophy that will change the way you watch the beautiful game. In a sport which is so largely dictated by randomness, how can we accurately assess the performance of teams, players and managers? How can we tell who is good and who is simply lucky? The Football Code teaches how a more scientific approach can eradicate the damaging effects of chance, leaving a clearer image of what is actually happening on the field of play. Only then can managers sign better players. Only then can pundits offer better judgements. Only then can fans compile better fantasy football teams. This book addresses the intrinsic errors and inefficiencies which plague the sport, whilst at the same time revealing the top secret methods that professional gambling syndicates use to predict future outcomes. Above all, it discloses the top secret, data-driven system that one football mastermind has used to make millions in the betting markets, and that has allowed the Championship team he owns to punch spectacularly above its financial weight. Football has finally found it's answer to baseball's 'Moneyball'. Any fan who doesn't read this book will be left behind. - William Lund. Unveils a revolutionary approach to the transfer market. Truly exceptional. - FootballNow. A masterclass. The sport of football will never be the same again - Levi Janssen.

**Data-Driven Football Predictions: Constructing the Perfect Over 2. 5 Goals Betting Strategy for the English Premier League** Martin Chamberlain,2019-08-19 Inspired by the fact that only 5% of football punters make a profit over the long term ,a group of data scientists created the Football Data Labs project with the aim of developing profitable, data-driven and easily applicable betting strategies for novice and experienced punters alike. The first publication of the Data-Driven Football Predictions series will cover a betting methodology for the over 2.5 goals market, as applied to the English Premier League. The book will serve three purposes. Firstly, it will present a data-driven league-specific, profitable and back-tested betting strategy with detailed illustrations and examples. Secondly, by presenting each step of the betting methodology, the book will actually serve as a guide on constructing any sports betting strategy. Lastly, the book will introduce the novice bettors with some of the most relevant factors to consider when placing an over 2.5 goals bet. By reviewing data patterns as applied to the English Premier League, the book will expose the power of league-specific data patterns. This book will help transform the typical fun-loving recreational punter into a wealthier and data-wise smarter ... fun-loving punter. After all, the major inspiration for this book, and for the Football Data Labs project as a whole, is to educate bettors about profitable data patterns that would give them an edge against the bookmakers.

Bass,1999-11-02 Readers were first made aware of maverick physicists Doyné Farmer and Norman Packard in The Eudaemonic Pie, which chronicled their assault on the casinos of Las Vegas. Correct Scores - A Guide to Betting on Football Jason Houlsby,2013-12-16 Some people think that trying to predict the result of a football match is largely a waste of time. They instinctively know that 'anything can happen in those 90 minutes and often does'. It's true that you can never predict the result of a football match with any degree of certainty, but that doesn't mean that football is wholly unpredictable. A football match is probabilistic in nature and always involves an element of 'God plays dice'. Freak results happen and they are largely unpredictable, but they happen no more often than they should and the best teams win more often than

not. To be profitable betting on football it's important to evaluate probabilities rather than predict winners and to use a value based approach to betting. You'll need to establish what factors are important and therefore what information is relevant and you'll need to understand the nature of the problem space. The traditional approach to data processing for football is to use ratings and statistics, however neural networks provide a more sophisticated approach. The subconscious mind can also be very powerful when trained and used in the right way. Some people rely too much on their 'gut feeling' when gambling and other people not enough. Sometimes we feel more certain about a decision than we should and we tend not to think in terms of probabilities, however it is possible to train our minds to be more effective. It's also important to take a disciplined and intelligent approach and to always learn and evolve. One thing that you must accept is that the process involves losing and you can't force your luck. You also need to be realistic: luck is completely random and impersonal. You can be lucky after the event, but not before. You can't see the future in a dream. Dreams are windows to the subconscious, not the future. Whether you plan to take a systematic approach to betting on football or not, this guide will help you to understand what's important and what's not and how best to proceed. There is also a small, easy to understand introduction to neural networks describing what they are and how they work by way of a simple example.
