From A to Zine Julie Bartel,2004 Libraries eager to serve the underserved teen-to-twenty-year-old market can make the library a cool place to hang out. All it takes are zines, according to the author, young adult librarian Julie Bartel. Zines and alternative press materials provide a unique bridge to appeal to disenfranchised youth, alienated by current collections. For librarians unfamiliar with the territory, or anxious to broaden their collection, veteran zinester Bartel establishes the context, history, and philosophy of zines, then ushers readers through an easy, do-it-yourself guide to creating a zine collection, includ.

War and Remembrance Renée Dickason,Delphine Letort,Michel Prum,Stéphanie A.H. Bélanger,2022-06-15 Memory, while seemingly a thing of the past, has much to reveal in the present. With its focus on memory, War and Remembrance provides new viewpoints in the field of war representation. Bringing an interdisciplinary approach to discussions of the cultural memory of war, the collection focuses on narratives, either fictional or testimonial, that challenge ideological discourses of war. The acts of remembrance and of waging war are constantly evolving. A range of case studies – analyzing representations of war in art, film, museums, and literature from Nigeria, Australia, Sri Lanka, Canada, and beyond – questions our current approaches to memory studies while offering reinterpretations of established narratives. Throughout, a commitment to Indigenous perspectives, to examining the ongoing legacy of colonialism, and to a continued reckoning with the Second World War foregrounds what is often forgotten in the writing of a single,

official history. *War and Remembrance* invites readers to cast a reflexive look at wars and conflicts past – some of them forgotten, others still vividly commemorated – the better to understand the cultural, political, and social stake of memory as a source of conflict and exchange, of resistance and opposition, and of negotiation and reconciliation.

Make a Zine Joe Biel, 2014-11-29 In *Microcosm's* DIY guide to zine-making, editors Bill Brent, Joe Biel, and a cast of contributors take you from the dreaming and scheming stages onto printing, publication and beyond! Covering all the bases for beginners, *Make a Zine!* hits on more advanced topics like Creative Commons licenses, legality, and sustainability. Says *Feminist Review*, “*Make a Zine!* is an inspiring, easy, and digestible read for anyone, whether you’re already immersed in a cut-and-paste world, a graphic designer with a penchant for radical thought, or a newbie trying to find the best way to make yourself and your ideas known.” Illustrated by an army of notable and soon-to-be-notable artists and cartoonists, *Make a Zine!* also takes a look at the burgeoning indie comix scene, with a solid and comprehensive chapter by punk illustrator Fly (Slug and Lettuce, Peops). Part history lesson, part how-to guide, *Make a Zine!* is a call to arms, an ecstatic, positive rally cry in the face of TV show book clubs and bestsellers by celebrity chefs. As says Biel in the book’s intro, “Let’s go!”

Renewable Energy for Smart and Sustainable Cities Mustapha Hatti, 2018-11-23 This book features cutting-edge research presented at the second international conference on Artificial Intelligence in Renewable Energetic Systems, IC-AIRES2018, held on 24–26 November 2018, at the High School of Commerce, ESC-Koléa in Tipaza, Algeria. Today, the fundamental challenge of integrating

renewable energies into the design of smart cities is more relevant than ever. While based on the advent of big data and the use of information and communication technologies, smart cities must now respond to cross-cutting issues involving urban development, energy and environmental constraints; further, these cities must also explore how they can integrate more sustainable energies. Sustainable energies are a major determinant of smart cities' longevity. From an environmental and technological standpoint, these energies offer an optimal power supply to the electric network while creating significantly less pollution. This requires flexibility, i.e., the availability of supply and demand. The end goal of any smart city is to improve the quality of life for all citizens (both in the city and in the countryside) in a way that is sustainable and respectful of the environment. This book encourages the reader to engage in the preservation of our environment, every moment, every day, so as to help build a clean and healthy future, and to think of the future generations who will one day inherit our planet. Further, it equips those whose work involves energy systems and those engaged in modelling artificial intelligence to combine their expertise for the benefit of the scientific community and humanity as a whole.
