Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity

to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

Mobile Marketing Matt Haig, 2002 Mobile marketing [using SMS - the short messaging service to send text messages via mobile phones] is emerging as a direct and powerful way to communicate with customers. This is the first book devoted exclusively to exploring the potential of this new medium.

Mobile Devices and the Library Joe Murphy,2014-01-02 Mobile devices are the 'it' technology, and everyone wants to know how to apply them to their environments. This book brings together the best examples and insights for implementing mobile technology in libraries. Chapters cover a wide variety of the most important tools and procedures from developing applications to marketing and augmented reality. Readers of this volume will get complete and timely knowledge of library applications for handheld devices. The Handheld Librarian conferences have been a centrepiece of learning about how to apply mobile technologies to library services and collections as well as a forum for sharing examples and lessons learned. The conferences have brought our profession forward into the trend and kept us up to date with ongoing advances. This volume brings together the best from that rich

story and presents librarians with the basic information they need to successfully make the case for and implement programs leveraging mobile devices in their libraries. Authors of the diverse practical and well researched pieces originate in all types of libraries and segments of the profession. This wide representation ensures that front line librarians, library administrators, systems staff, even library professors will find this volume perfectly geared for their needs. This book was published as a special issue of The Reference Librarian.

Take Control of the Mac Command Line with Terminal, 3rd Edition Joe Kissell, 2024-02-12 Learn how to unleash your inner Unix geek! Version 3.3, updated February 12, 2024 This book introduces you to the Mac's command line environment, teaching you how to use the Terminal utility to accomplish useful, interesting tasks that are either difficult or impossible to do in the graphical interface. If you've ever thought you should learn to use the Unix command line that underlies macOS, or felt at sea when typing commands into Terminal, Joe Kissell is here to help! With this book, you'll become comfortable working on the Mac's command line, starting with the fundamentals and

adding more advanced topics as your knowledge increases. Now includes complete coverage of Monterey, Big Sur, Catalina, and zsh! Joe includes 67 real-life recipes for tasks that are best done from the command line, as well as directions for working with permissions, carrying out grep-based searches, creating shell scripts, and installing Unix software. The book begins by teaching you these core concepts:

- The differences among Unix, a command line, a shell, and Terminal
- Exactly how commands, arguments, and flags work
- The basics of Terminal's interface and how to customize it

Next, it's on to the command line, where you'll learn:

- How to navigate your Mac's directory structure
- Basic file management: creating, copying, moving, renaming, opening, viewing, and deleting files
- Creating symbolic links
- The types of command-line programs
- How to start and stop a command-line program
- How to edit a text file in nano
- How to customize your prompt and other shell defaults
- The importance of your PATH and how to change it, if you need to
- How to get help (Joe goes way beyond telling you to read the man pages)

You'll extend your skills as you discover how to:

- Create basic shell scripts to automate repetitive tasks.
- Make shell scripts that have variables, user input,

conditional statements, loops, and math. • See which programs are running and what system resources they're consuming. • Quit programs that refuse to quit normally. • Enable the command line to interact with the Finder. • Control another Mac via its command line with ssh. • Understand and change an item's permissions, owner, and group. • Run commands as the root user using sudo. • Handle output with pipe (|) or redirect (> or <). • Use grep to search for text patterns in files and filter output. • Install new command-line software from scratch or with a package manager. • Use handy shortcuts in the Terminal app itself and in zsh. Questions answered include: • What changed on the command line in recent versions of macOS? • What are the differences between the zsh shell and the bash shell? • Which shell am I using, and how can I change my default shell? • How do I quickly figure out the path to an item on my Mac? • How can I customize my Terminal window so I can see man pages behind it? • How can I make a shortcut to avoid retyping the same long command? • Is there a trick for entering a long path quickly? • What should I say when someone asks if I know how to use vi? • How do I change my prompt to suit my mood or needs? • What is Command Line Tools

for Xcode? • When it comes to package managers, which one should I use? Finally, to help you put it all together, the book showcases 67 real-world recipes that combine commands to perform useful tasks, such as listing users who've logged in recently, manipulating graphics, using a separate FileVault password, creating and editing user accounts, figuring out why a disk won't eject, copying the source code of a webpage, determining which apps have open connections to the internet, flushing the DNS cache, finding out why a Mac won't sleep, sending an SMS message, and deleting stubborn items from the Trash.
