The Governance of Network Industries Rolf W. Künneke,John Groenewegen,Jean-François Auger,2009-01-01 This book addresses critical issues in the governance of network industries in terms of institutional design, technology and policy. Infrastructures are subject to substantial readjustments of governance structures, often labeled as liberalization, privatization or reregulation. This affects all traditional infrastructure sectors including communications, energy, transport and water. This volume highlights and illustrates some of the major challenges for readjusting the governance of network industries from an economic, institutional, political and technological perspective. The three parts of the book address the institutional design of infrastructures, the role of technology in different sectors, and actor behavior. Adopting a multidisciplinary perspective, this book will appeal to economists and political scientists with an interest in the management of network industries. It will also be of great value to policy-makers and regulators in the field.

Leonardo to the Internet Thomas J. Misa,2004 Beginning his narrative at the dawn of the modern era, he surveys the intersections of technology, politics, and culture in the Renaissance court system of Western Europe; the role of technology in Holland's commercial expansion; the diverse paths to and through Britain's industrial revolution; the links among technology, imperialism, and trade in the nineteenth century; and the application of scientific

discoveries in chemistry and physics to industry in Germany and the United States at the turn of the twentieth century. He then examines the introduction of mass-produced consumer goods and their impact on daily life and modernist sensibilities; the rise of the military-industrial complex during World War II and the technological innovations generated by the command-and-control economies of the Cold War; and the emergence of a technology-oriented global culture since the 1970s.
