Removing Barriers Jill M. Bystydzinski, Sharon R. Bird, 2006-03-20 Movement into academic science, technology, engineering, and mathematics (STEM) fields has been slow for women and minorities. Not only are women and minorities underrepresented in STEM careers, there is strong evidence that many academic departments are resistant to addressing the concerns that keep them from entering careers in these fields. In light of recent controversies surrounding these issues, this volume, examining reasons for the persistence of barriers that block the full participation and advancement of underrepresented groups in the sciences and addressing how academic departments and universities can remedy the situation, is particularly timely. As a whole, the volume shows positive examples of institutions and departments that have been transformed by the inclusion of women and recommends a set of best practices for continuing growth in positive directions.

Optimized C++ Kurt Guntheroth, 2016-04-27 In today's fast and competitive world, a program's performance is just as important to customers as the features it provides. This practical guide teaches developers performance-tuning principles that enable optimization in C++. You'll learn how to make code that already embodies best practices of C++ design run faster and consume fewer resources on any computer—whether it's a watch, phone, workstation, supercomputer, or globe-spanning network of servers. Author Kurt Guntheroth provides several running examples that demonstrate how to apply these principles incrementally to improve existing code so it meets customer requirements for responsiveness and throughput. The advice in this book will prove itself the first time you hear a colleague exclaim, "Wow, that was fast. Who fixed something?" Locate performance hot spots using the profiler and software timers Learn to perform repeatable experiments to measure performance of code changes Optimize use of dynamically allocated variables Improve performance of hot loops and functions Speed up string handling functions Recognize efficient algorithms and optimization patterns Learn the strengths—and weaknesses—of C++ container classes View searching and sorting through an optimizer's eye Make efficient use of C++ streaming I/O functions Use C++ thread-based concurrency features effectively

Miracles We Have Seen Harley Rotbart, 2016-09-13 This is a book of miracles—medical events witnessed by leading physicians for which there is no reasonable medical explanation, or, if there is, the explanation itself is extraordinary. These dramatic first-person essays detail spectacular serendipities, impossible cures, breathtaking resuscitations, extraordinary awakenings, and recovery from unimaginable disasters. Still other essays give voice to cases in which the physical aspects were less dramatic than the emotional aspects, yet miraculous and transformational for everyone involved. Positive impacts left in the wake of even the gravest of tragedies, profound triumphs of heart and spirit. Preeminent physicians in many specialties, including deans and department heads on the faculties of the top university medical schools in the country describe, in everyday language and with moving testimony, their very personal reactions to these remarkable clinical experiences. Among the extraordinary cases poignantly recounted by the physicians witnessing them: A priest visiting a hospitalized patient went into cardiac arrest on the elevator, which opened up on the cardiac floor, right at the foot of the cardiac specialist, at just the right moment. A tiny premature baby dying from irreversible lung disease despite the most intensive care who recovered almost immediately after being taken from his hospital bed and placed on his mother's chest. President John F. Kennedy's son Patrick, who died shortly after birth, and whose disease eventually led to research that saved generations of babies. A nine-year-old boy who was decapitated in a horrific car accident but survived without neurological damage. A woman who conceived and delivered a healthy baby—despite having had both of her fallopian tubes surgically removed. A young man whose only hope for survival was a heart transplant, but just at the moment he developed a potentially fatal complication making a transplant impossible, his own heart began healing itself. A teenage girl near death after contracting full-blown rabies who became the first patient ever to recover from that disease after an unexpected visit by Timothy Dolan, the man who would go on to become the Archbishop of New York. A Manhattan window-washer who fell 47 stories—and not only became the only person ever to survive a fall from that height, but went on to make a full recovery. Miracles We Have Seen is a book of inspiration and optimism, and a compelling glimpse into the lives of physicians—their humanity and determined devotion to their patients and their patients' families. It reminds us that what we don't know or don't understand isn't necessarily cause for fear, and can even be reason for hope

Mesoamerican Healers Brad R. Huber, 2001-11-15 Healing practices in Mesoamerica span a wide range, from traditional folk medicine with roots reaching back into the prehispanic era to westernized biomedicine. These sometimes cooperating, sometimes competing practices have attracted attention from researchers and the public alike, as interest in alternative medicine and holistic healing continues to grow. Responding to this interest, the essays in this book offer a comprehensive, state-of-the-art survey of Mesoamerican healers and medical practices in Mexico and Guatemala. The first two essays describe the work of prehispanic and colonial healers and show how their roles changed over time. The remaining essays look at contemporary healers, including bonesetters, curers, midwives, nurses, physicians, social workers, and spiritualists. Using a variety of theoretical approaches, the authors examine such topics as the intersection of gender and curing, the recruitment of healers and their training, healers' compensation and workload, types of illnesses treated and recommended treatments, conceptual models used in diagnosis and treatment, and the relationships among healers and between indigenous healers and medical and political authorities.
