Warhol-isms Andy Warhol, 2022-05-10 A unique collection of brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—"In the future, everyone will be world-famous for 15 minutes." Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well. I went to [a psychiatrist] once, and he never called me back. They always say that time

changes things, but you actually have to change them yourself. I've never met a person I couldn't call a beauty. New things are always better than old things. I'm still a commercial artist. I was always a commercial artist.

The Ecstasy of Communication, new edition Jean Baudrillard, 2012-11-30 Baudrillard's essential crib-book, lexicon, and companion piece to any and all of his books and a prescient portrait of our contemporary condition. "The need to speak, even if one has nothing to say, becomes more pressing when one has nothing to say, just as the will to live becomes more urgent when life has lost its meaning." —from *The Ecstasy of Communication* First published in France in 1987, *The Ecstasy of Communication* was Baudrillard's summarization of his work for a postdoctoral degree at the Sorbonne: a dense, poetically crystalline essay that boiled down two decades of radical, provocative theory into an aphoristically eloquent swan song to twentieth-century alienation. Baudrillard's quixotic effort to be recognized by the French intellectual establishment may have been doomed to failure, but this text immediately became a pinnacle to his work, a mid-career assessment that looked both

forward and back. By carefully distilling the most radical elements of his previous books, Baudrillard constructed the skeleton key to all of the work that was to come in the second half of his career, and set the scene for what he termed the “obscene”: a world in which alienation has been succeeded by ceaseless communication and information. The Ecstasy of Communication is a decisive, compact description of what it means to be “wired” in our braver-than-brave new world, where sexuality has been superseded by pornography, knowledge by information, hysteria by schizophrenia, subject by object, and violence by terror. The Ecstasy of Communication is an anti-manifesto that confronted and dispensed with such influences as Marshall McLuhan, Guy Debord, and Georges Bataille. It is an essential crib-book, lexicon, and companion piece to any and all of Baudrillard's books. Twenty-five years after its original publication, it remains not only a prescient portrait of our contemporary condition, but also a dark mirror into which we have not yet dared to look.

Copper-Oxygen Chemistry Kenneth D. Karlin, Shinobu Itoh, Steven Rokita, 2011-08-24 Covers the

vastly expanding subject of oxidative processes mediated by copper ions within biological systems. Copper-mediated biological oxidations offer a broad range of fundamentally important and potentially practical chemical processes that cross many chemical and pharmaceutical disciplines. This newest volume in the Wiley Series on Reactive Intermediates in Chemistry and Biology is divided into three logical areas within the topic of copper/oxygen chemistry— biological systems, theory, and bioinorganic models and applications—to explore the biosphere for its highly evolved and thus efficient oxidative transformations in the discovery of new types of interactions between molecular oxygen and copper ion. Featuring a diverse collection of subject matter unified in one complete and comprehensive resource, Copper-Oxygen Chemistry probes the fundamental aspects of copper coordination chemistry, synthetic organic chemistry, and biological chemistry to reveal both the biological and chemical aspects driving the current exciting research efforts behind copper-oxygen chemistry. In addition, Copper-Oxygen Chemistry: Addresses the significantly increasing literature on oxygen-atom insertion and carbon-carbon bond-forming reactions as well as enantioselective oxidation chemistries. Progresses from biological systems to spectroscopy and theory, and onward to bioinorganic models and applications. Covers a wide array of reaction types such as insertion and dehydrogenation reactions that utilize the cheap, abundant, and energy-containing O₂ molecule. With thorough coverage by prominent authors and researchers shaping innovations in this growing field, this valuable reference is essential reading for bioinorganic chemists, as well as organic, synthetic, and pharmaceutical chemists in academia and industry.
