American whaling to come along in a generation. —Nathaniel Philbrick The epic history of the iron men in wooden boats who built an industrial empire through the pursuit of whales. To produce a mighty book, you must choose a mighty theme, Herman Melville proclaimed, and this absorbing history demonstrates that few things can capture the sheer danger and desperation of men on the deep sea as dramatically as whaling. Eric Jay Dolin begins his vivid narrative with Captain John Smith's botched whaling expedition to the New World in 1614. He then chronicles the rise of a burgeoning industry—from its brutal struggles during the Revolutionary period to its golden age in the mid-1800s when a fleet of more than 700 ships hunted the seas and American whale oil lit the world, to its decline as the twentieth century dawned. This sweeping social and economic history provides rich and often fantastic accounts of the men themselves, who mutinied, murdered, rioted, deserted, drank, scrimshawed, and recorded their experiences in journals and memoirs. Containing a wealth of naturalistic detail on whales, *Leviathan* is the most original and stirring history of American whaling in many decades.

Food Biochemistry and Food Processing Y. H. Hui, Wai-Kit Nip, Leo M. L. Nollet, Gopinadhan Paliyath, Benjamin K. Simpson, 2008-02-15 The biochemistry of food is the foundation on which the

research and development advances in food biotechnology are built. In Food Biochemistry and Food Processing, lead editor Y.H. Hui has assembled over fifty acclaimed academicians and industry professionals to create this indispensable reference and text on food biochemistry and the ever-increasing development in the biotechnology of food processing. While biochemistry may be covered in a chapter or two in standard reference books on the chemistry, enzymes, or fermentation of food, and may be addressed in greater depth by commodity-specific texts (e.g., the biotechnology of meat, seafood, or cereal), books on the general coverage of food biochemistry are not so common. Food Biochemistry and Food Processing effectively fills this void. Beginning with sections on the essential principles of food biochemistry, enzymology and food processing, the book then takes the reader on commodity-by-commodity discussions of biochemistry of raw materials and product processing. Later sections address the biochemistry and processing aspects of food fermentation, microbiology, and food safety. As an invaluable reference tool or as a state-of-the-industry text, Food Biochemistry and Food Processing fully develops and explains the biochemical aspects of food processing for scientist and student alike.

Ice Cream Field ,1950 Vol. 32 [no. 10] constitutes Souvenir edition and year book for 1939.

Ice Cream W. S. Arbuckle,2013-11-21 This edition of Ice Cream is a full revision of previous editions and includes an updating of the areas that have been affected by changes and new technology. The ice cream industry has developed on the basis of an abundant economical supply of ingredients and is a high-volume, highly automated, modern, progressive, very competitive industry composed of large and small businesses manufacturing ice cream and related products. The industry underwent a difficult period of adjusting to economic changes and to the establishment of product specifications and composition regulations. The latter area has now become more stabilized and the Frozen Desserts Definitions and Standards of Identity are now more clearly defined, as are ingredient and nutritional labeling specifications. The chapters that include basic information on ice cream technology remain for the most part unchanged in order to accommodate beginners in the industry and the smaller processors. In other chapters major revisions and the incorporation of new material have been made. Key classical references and information have been retained or added in order to keep intact those portions of the book which students have found most useful and helpful as reflected in my own teaching, research, and publications in the field of dairy science, and particularly in the field of ice cream production.
