**The Apple Orchard** Susan Wiggs,2015-02-24 A NEW ORIGINAL HALLMARK MOVIE: THE SECRETS OF BELLA VISTA! From #1 New York Times Bestselling Author Susan Wiggs “...sweet, crisp and juicy.”—Elin Hilderbrand “A powerful story of love, loss, hope and redemption.”—Kirkus, Starred Review Tess Delaney makes a living restoring stolen treasures to their owners. People like Annelise Winther, who has just been reunited with her mother’s long gone necklace, worth a sum that could change her life. To Annelise, whose family was torn apart during WWII, the necklace represents her history, and the value is in its memories. But Tess’s own history is filled with gaps: a father she never met, a mother who spent more time traveling than with her daughter. Then the enigmatic Dominic Rossi arrives on her San Francisco doorstep with the news that the grandfather she never knew is in a coma and that she’s destined to inherit half of his apple orchard estate called Bella Vista. The rest is willed to Isabel Johansen, the half-sister she didn’t know she had. With Dominic and Isabel by her side, Tess discovers world where family comes first and the roots of history run deep. A place where falling in love is not only possible, but inevitable. And in a season filled with new experiences, Tess begins to see the truth in something Annelise once told her: if you don’t believe memories are worth more than money, then perhaps you’ve not made the right kind of memories. Wiggs deftly weaves a narrative that takes the reader from present day California to Denmark during WWII to tell a story of family ties both old and new—and the moments that connect our hearts. **Shared Representations** Sukhvinder S. Obhi,Emily S. Cross,2016-11-17 Socially situated thought and behaviour are pervasive and vitally important in human society. The social brain has become a focus of study for researchers in the neurosciences, psychology, biology and other areas of behavioural science, and it is becoming increasingly clear that social behaviour is heavily dependent on shared representations. Any social activity, from a simple conversation to a well-drilled military exercise to an exquisitely perfected dance routine, involves information sharing between the brains of those involved. This volume comprises a collection of cutting-edge essays centred on the idea of shared representations, broadly defined. Featuring contributions from established world leaders in their fields and written in a simultaneously accessible and detailed style, this is an invaluable resource for established researchers and those who are new to the field.

*The Gap* Thomas Suddendorf,2013-11-12 There exists an undeniable chasm between the capacities of humans and those of animals. Our minds have spawned civilizations and technologies that have changed the face of the Earth, whereas even our closest animal relatives sit unobtrusively in their dwindling habitats. Yet despite longstanding debates, the nature of this apparent gap has remained unclear. What exactly is the difference between our minds and theirs? In *The Gap*, psychologist Thomas Suddendorf provides a definitive account of the mental qualities that separate humans from other animals, as well as how these differences arose. Drawing on two decades of research on apes, children, and human evolution, he surveys the abilities most often cited as uniquely human -- language, intelligence, morality, culture, theory of mind, and mental time travel -- and finds that two traits account for most of the ways in which our minds appear so distinct: Namely, our open-ended ability to imagine and reflect on scenarios, and our insatiable drive to link our minds together. These two traits explain how our species was able to amplify qualities that we inherited in parallel with our animal counterparts; transforming animal communication into language, memory into mental time travel, sociality into mind reading, problem solving into abstract reasoning, traditions into culture, and empathy into morality. Suddendorf concludes with the provocative suggestion that our unrivalled status may be our own creation -- and that the gap is growing wider not so much because we are becoming smarter but because we are killing off our closest intelligent animal relatives. Weaving together the latest findings in animal behavior, child development, anthropology, psychology, and neuroscience, this book will change the way we think about our place in nature. A major argument for reconsidering what makes us human, *The Gap* is essential reading for anyone interested in our evolutionary origins and our relationship with the rest of the animal kingdom.

**The Philosophy of Daniel Dennett** Bryce Huebner,2018 Daniel C. Dennett began publishing innovative philosophical research in the late 1960s, and he has continued to do so for the past 45 years. He has addressed questions about the nature of mind and consciousness, the possibility of freedom, and the significance of evolution to addressing questions across the cognitive, biological, and social sciences. The *Philosophy of Daniel Dennett* explores the intellectual significance of this research project, bringing together the insights of eleven researchers who are currently working on themes that are relevant to Dennett's philosophical worldview. Some of the contributions address interpretive issues within Dennett's corpus, and aim to bring increased clarity to Dennett's project. Others report novel empirical data, at least in part, in the service of fleshing out Dennett's claims. Some of them provide a fresh take on a Dennettian theme, and others extend his views in novel directions. Like Dennett's own work, these papers draw on a wide range of different methodologies, from appeals to intuition pumps and scientific data, to turning the knobs on a theory to see what it can do. But each of them aims to be readable, and approachable. And as a whole, the volume provides a critical and constructive overview of Dennett's stance-based methodology, as well as explorations of his claims about mental representation, consciousness, cultural evolution, and religion.

**Puzzle Box, Volume 1** Peter Grabarchuk,Serhiy Grabarchuk,2016-11-16 Multiplying my age by 6 then subtracting 6 produces the same result as subtracting 7 from my age then multiplying by 7. How old am I? On my broken calculator with keys + - ÷ × =, the only functional number is 7. How can I get 34 to appear in the readout? A country mints four denominations of coins, in whole numbers of cents. It takes four of these coins to make 21¢, or 24¢, or 25¢, or 26¢. What are the denominations of the coins? These and almost 300 other mathematical puzzles appear in this original collection, devised by world-renowned mathematicians, puzzle creators, and devoted puzzle lovers. A unique puzzle project, it unites the efforts of a dozen authors, including software engineer Andrea Gilbert and Bram Cohen, author of the P2P BitTorrent protocol. *Starting from Scratch* John Matthews,2010-10-28 This book compares the beginning of symbolic thought in human infancy with that of our close primate relatives, the chimpanzees. The author investigates the precursors of symbolism by studying the actions and interactions of a small group of these intelligent, non-human primates who live in Singapore Zoo. Drawing upon his years of detailed observations, Matthews offers an in-depth analysis and interpretation of chimp behaviour to present an unprecedented account of the beginnings of symbolic thought. The book shows that the actions the chimpanzees perform have structural and semantic similarities with the actions of emergent expression and representation we find in human infancy. Of great importance is the finding that chimpanzee mark-making activity is not an artefact of human interference, but part of chimpanzee culture. Young chimpanzees seem to be introduced to acts of pretence and imagination by older and more experienced ones and taught the rudiments of expression, representation and symbolism. The implications for our understanding of symbolism, language, art and education are enormous, as are those about our origins and our place within nature. The book is written in an accessible style for both specialist and non-specialist readers, and illustrated with the author's drawings and photographs.

**Comparative Psychology** Mauricio R Papini,2020-10-20 This revised third edition provides an up to date, comprehensive overview of the field of comparative psychology, integrating both evolutionary and developmental studies of brain and behavior. This book provides a unique combination of areas normally covered independently to satisfy the requirements of comparative psychology courses. Papini ensures thorough coverage of topics like the fundamentals of neural function, the cognitive and associative capacities of animals, the development of the central nervous system and behavior, and the fossil record of animals including human ancestors. This text includes many examples drawn from the study of human behavior, highlighting general and basic principles that apply broadly to the animal kingdom. New topics introduced in this edition include genetics, epigenetics, neurobiological, and cognitive advances made in recent years into this evolutionary-developmental framework. An essential textbook for upper level undergraduate and graduate courses in comparative psychology, animal behavior, and evolutionary psychology, developmental psychology, neuroscience and behavioral biology.
