A Manual for the Identification of Plant Seeds and Fruits R.T.J. Cappers, R.M. Bekker, 2022-02-05 The taxonomic and ecological identification of individual seeds and fruits of wild and cultivated plants is not always straightforward. This book helps you to get started, and also serves as a basis for further identification. It describes the inflorescence(s) and infructescence(s) seen in each of a set of 30 plant families, as well as the morphology of the seeds and fruits (with special emphasis on typology), the dispersal units (diaspores), and, if present, heterodiaspory. The manual is richly illustrated with 640 color photos of inflorescences, infructescences, seeds, fruits, and diaspores. Technical terms are described in a glossary. Indices of scientific plant names and subject names are included. This book will be of interest not only to those engaged in the identification of seeds and fruits, such as those who work in seed testing, but also to taxonomists, ecologists, archaeobotanists, and florists who wonder what they are looking at. This handbook is a completely revised version of the first edition, which was published in 2013. An important adaptation relates to new developments in plant taxonomy and the classification of fruits and diaspores. The number of plant families has been extended from 19 to 30.

Diseases of Fruits and Vegetables S.A.M.H. Naqvi, 2007-05-08 Among the Horticultural Crops, Fruits and Vegetables (FV) are of primary importance as the key source of essential components in an adequate and balanced human diet. FV have supported largely the daily food requirement of mankind since ages and even before man learned to grow cereal crops systematically. Over the years, growing FV has been the mainstay of rural economy and has emerged as an indispensable part of agriculture world over, offering farmers a wide range of crops in varied topography and climate. In certain parts of the world, FV are the major dietary staple. Apart from being a rich source of vitamins and minerals, this sector also contributes significantly in economy of the region or the nation. The increased income from per unit area of FV is far ahead and can not be compared with that of cereal crops. A recent survey by the Economist revealed that the world population has increased by 90 % in the past 40 years while food production has increased only by 25 % per head. With an additional 1.5 billion mouth to feed by 2020, farmers worldwide have to produce 39 % more. Looking at the load of the future food requirement, the global increased production of FV during last few years has absorbed the additional food requirement and accordingly the eating habits are also changing and shifting towards more consumption of these commodities worldwide.

Fruits and Vegetable Wastes Ramesh C. Ray, 2022-11-16 This book puts together all aspects of valorization of vegetable and fruit wastes (VFWs) into different biocommodities and platform chemicals using fermentation and non-fermentation processes. VFWs are a special group of solid waste (biomass) that needs to be characterized to understand the nature of applications as raw materials and to propose an appropriate methodology for bioprocessing into value-added commodities. VFWs provide favorable conditions for the growth of microorganisms, and this opens up great opportunities for their use in fermentation processes. For example, VFWs can be used as a solid support, carbon, and nutrient source in fermentation for the production of a variety of value-added biocommodities such as enzymes, single-cell proteins, bioadsorbents, phenolic bioactive compounds, aroma and flavor compounds, and platform chemicals like lactic acid, bioethanol, and biobutanol. Researchers and academics in the area of environmental science and engineering, chemical engineering, biotechnology, life science, and food science and technology, undergraduate and graduate students, industry professionals, and policymakers will find this publication useful. Bioprocessing of agro-wastes is a recent technology for developing novel bioproducts. This book will also be of interest to the general public as a reference for all those interested in waste management.
