Reducing Gasoline Consumption Terry Dinan,David H. Austin,2002 Compares 3 methods of reducing gasoline consumption in the United States: setting higher Corporate Average Fuel Economy (CAFE) standards for passenger vehicles; raising the Federal tax on gasoline; and setting a limit on carbon emissions from gasoline combustion and requiring gasoline producers to hold allowances for those emissions, known as a cap-and-trade program.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy,2011-07-03
Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given driving distance-because energy savings

are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Carbon footprint calculators for citizens Marja Salo, Maija K. Mattinen, 2017-08-16 In this report, we look into Nordic carbon footprint calculators and selected benchmarks from other countries. We present data on 10 carbon footprint calculators for public use. The focus is on the features, recorded number of users, and experiences on using the calculators in campaigns and research projects. The purpose is to highlight good practices in the design and use of calculators for ordinary citizens which can be used to introduce the role of consumption choices in climate change mitigation. The report provides suggestions for the future development of existing or new calculator initiatives. The study was carried out by the Finnish Environment Institute, financed by the Nordic Council of Ministers, administrated by the Sustainable Consumption and Production Working Group and guided by a steering group consisting of representatives from Finland, Iceland, Norway and Sweden.

Air Pollution XXIX J. Casares, J. Longhurst, J. Barnes, 2021-12-29 Discussing many important air pollution issues, the included contributions were presented at the 29th annual meeting in a successful series of international conferences dealing with the Modelling, Monitoring and Management of Air Pollution. The scientific knowledge derived from well-designed studies needs to be allied with further technical and economic studies to ensure cost-effective and efficient mitigation. In turn, the science, technology and economic outcomes are necessary but not sufficient. Increasingly, it is being recognised that the outcome of such research needs to be contextualised within well-formulated communication strategies that help policymakers and citizens to understand and appreciate the risks and rewards arising from air pollution management. Consequently, this volume comprises a wide range of high-quality papers that develop the fundamental science of air pollution and that place these new developments within the frame of mitigation and management of air pollution. Air pollution issues remain one of the most challenging problems facing the international community. The varied research published in this book covers topics such as Air pollution modelling; Aerosols and nanoparticles; Emission studies; Indoor air pollution; Monitoring,

measuring and air quality data; Air pollution control technologies; Industrial and transport air pollution; Climate change effects; Emerging air pollutants; Air pollution management, policy and legislation; Low carbon strategies; Biogenic emissions; Biomass emissions; Atmospheric modelling; Pollution dynamics; Air quality forecasting using satellite data; Environmental justice; Interdisciplinary studies on air quality; Transboundary air pollution; Anthropogenic pollution.

Reducing Gasoline Consumption Terry Dinan,David Austin,2003 Several Members of Congress and public interest groups have recently proposed policies that would reduce gasoline consumption in the United States. Such proposals stem primarily from a desire to enhance the nation's energy security and to decrease its emissions of carbon dioxide, a key greenhouse gas that affects the Earth's climate. This book compares three methods of reducing gasoline consumption: increasing the corporate average fuel economy (CAFE) standards that govern passenger vehicles, raising the federal tax on gasoline, and setting a limit on carbon emissions from gasoline combustion and requiring gasoline producers to hold allowances for those emissions (a policy known as a cap-and-trade program). Also, the book weighs the relative merits of those policies against several major criteria: whether they would minimise costs to producers and consumers; how reliably they would achieve a given reduction in gasoline use; their implications for automobile safety; and their effects on such factors as traffic congestion, requirements for highway construction, and emissions of air pollutants other than carbon dioxide. In addition, the book examines two more policy implications that lawmakers may be concerned about: the impact on people at different income levels and in different regions, and the effects on federal revenue.

Digital Enterprise and Information Systems Ezendu Ariwa,Eyas El-Qawasmeh,2011-07-20 This volume constitutes the refereed proceedings of the International Conference on Digital Enterprise and Information Systems, held in London during July 20 - 22, 2011.
