Oxygen-Carrier-Aided Combustion Technology for Solid-Fuel Conversion in Fluidized Bed Lunbo

Duan, Lin Li, 2023-03-11 This open access book surveys the development of OCAC technology in the last decade for solid fuel conversion in fluidized beds. The scientific concerns, including combustion and emission characteristics, ash-related problems, OC aging, and so on, are summarized and analyzed. Beyond this, new concepts like OCAC with Oxy-PFBC, OCAC coupled with staged fuel conversion, OCAC in rotatory kilns and multi-functional OCAC are proposed, so as to promote the applications of OCAC to various fields in the future. Moreover, this book also outlines the perspectives for future research and development of OCAC. As an emerging technology, extensive studies and investigations are still necessary to fill in the gap from the fundamental understanding of the technology to its industrial demonstrations. Nevertheless, we believe that this book provides novel insights for the readership of energy and combustion and stimulate meaningful follow-on research on OCAC technology.

Methods for Monitoring and Diagnosing the Efficiency of Catalytic Converters M. Sideris, 1998-06-19

The dramatic evolution of catalytic converters in the last thirty years was a result of a need worldwide to reduce pollution created by the exhaust gases of internal combustion engines. Environmental concerns have led American, Japanese and European Union (EU) legislation to pose continuously stricter emission limits for petrol engines in the last decades. The catalytic converter has become the most important means

of exhaust treatment to achieve the desired emission limits. The international legislation has also created a need for a regular assessment of the efficiency of the catalytic converter in order to detect a deterioration of its conversion efficiency as soon as this deterioration takes place. The assessment of conversion efficiency of a catalytic converter can take place during normal driving of a vehicle (on-board diagnosis or OBD) or in a workshop by specialized technicians. The most important methods nowadays are the OBD methods. The evolution of methods concerned with OBD and non-OBD monitoring and diagnosing of efficiency of catalytic converters of internal combustion engines is described based on patents and published patent applications. Non-patent references are also used. The basic principles of modern catalytic converters are described in an extensive Introduction, where the importance of monitoring and diagnosing the efficiency of catalytic converters is demonstrated. The book is divided into four parts. The first part describes methods involving the use of oxygen or air/fuel exhaust gas sensors to determine the oxygen storage capacity of a catalytic converter. The second part describes methods involving the use of temperature sensors to determine the exothermic reaction capacity of a catalytic converter. The third part describes all other methods existing in patent literature that monitor and diagnose the efficiency of catalytic converters. The great majority of the methods of the third part involves exhaust gas concentration measurements. The fourth part comprises a general discussion of all methods described. In the beginning of each part, a short introduction is given to explain the problem that the methods attempt to solve. The methods in each part are presented in chronological order per patent applicant. This helps to evaluate how the patent applicant has improved his methods over time. A patent number index with information about the patent applicants,

inventors, priorities and patent-families, an inventor index, a company index and a subject index can be found at the end of the book.

Symposium Proceedings, Environmental Aspects of Fuel Conversion Technology, IV (April 1979, Hollywood, FL) ,1979

Natural Gas Conversion II H.E. Curry-Hyde,R.F. Howe,1994-07-15 This Symposium provided the opportunity to review progress after more than 10 years of research and development in the field of natural gas conversion. Oxidative coupling of methane as a route to higher value fuels or feedstock was a major part of the program. The advances in understanding of reaction mechanisms and catalyst structure were discussed in a Plenary paper and in many of the contributed papers. The homogeneous gas phase chemistry involved in methane oxidation is relevant not only to oxidative coupling but also to synthesis gas and methanol production via partial oxidation. This field is reviewed in a Plenary paper and contributed papers describe developments in catalysts and technology for partial oxidation to synthesis gas and to methanol. An alternative route to synthesis gas from methane currently receiving attention is carbon dioxide reforming. This technology is reviewed in a Plenary paper and recent advances are described in contributed papers. The first detailed account of the Shell SMDS Fischer-Tropsch process for production of transport fuels from natural gas recently commercialised in Malaysia is given in this book. Papers discuss structural aspects of Fischer-Tropsch catalysts, modifications of Fischer-Tropsch catalysts to produce light olefins, and the possibilities of operating a Fischer-Tropsch process off-shore. Methanol as an intermediate in natural gas conversion continues to attract attention, and methanol synthesis and conversion are discussed in

contributed papers. The possibilities of finding new uses for methane are treated in a Plenary paper and arguments for using methane as a fuel rather than a feedstock are also presented. Among the new uses of methane considered are the generation of electricity in fuel cells and the use of methane as a reductant for NO_x emissions. The papers will be of interest to scientists and engineers working in the field of gas conversion, transportation fuels, primary petrochemicals and catalysis.

Modular Systems for Energy and Fuel Recovery and Conversion Yatish T. Shah, 2019-06-28 Modular Systems for Energy and Fuel Recovery and Conversion surveys the benefits of the modular approach in the front end of the energy industry. The book also outlines strategies for managing modular approaches for fossil, renewable, and nuclear energy resource recovery and conversion with the help of successful industrial examples. The book points out that while the modular approach is most applicable for distributed and small-scale energy systems, it is also often used for parts of large-scale centralized systems. With the help of successful industrial examples of modular approaches for energy and fuel recovery and conversion, the book points out the need for more balance between large-scale centralized systems and small-scale distributed systems to serve the energy needs of rural and isolated communities. Coal, oil, natural gas, hydrogen, biomass, waste, nuclear, geothermal solar, wind, and hydro energy are examined, showing that modular operations are very successfully used in all these components of the energy industry. Aimed at academic researchers and industry professionals, this book provides successful examples and analysis of the modular operation for energy and fuel recovery and conversion. It is also a reference for those who are

engaged in the development of modular systems for energy and fuel recovery and conversion.

Petrol to Gas Lpg Auto Gas Conversion Victor Emeka,2015-12-21 What is autogas ?LPG autogas is an energy source that is recovered from natural gas deposits or from the refining process of crude oil. It is supplied and stored under relatively low pressure and at ambient temperature in liquid form. It changes from a liquid state to gas as it passes through the converter on its way to the engine in your car.LPG autogas conversion works in exactly the same way as a normal petrol(diesel) engine, only the conventional fuel is replaced with autogas LPG. Everything about the vehicle remains the same but a separate autogas fuel system is added. Converted vehicles become dual-fuel - you can change between running on petrol (diesel) or LPG autogas , even whilst on the move. LPG autogas tank constructed from steel is fitted in the boot. It is fitted with a multivalve. This unit comprises of a fuel gauge, a pressure relief valve, excess flow valve and various shut off valves. Tank is filled via a filling valve located usually at the rear of the vehicle. The LPG autogas in liquid form is carried through plastic coated copper pipes to the front of the car. Here it goes through a filter and than to the autogas LPG or CNG reducer. At this point it is converted to a gas ready for use by the engine. The flow of gas to the engine is controlled by an autogas ECU. This unit works alongside the car's own ECU constantly monitoring the exhaust emissions and adjusting the gas supply accordingly. This unit is self learning and adapts to different drivers and road conditions automatically.A switch on the dashboard allows you to select the option of running on autogas or petrol(diesel). LPG autogas or CNG kits to convert petrol and diesel engines consist of the same components. But the process of adjusting and setting the system looks different, cars with diesel engines requires more

experience and knowledge. Learn step by step how to convert lpg gas to drive your petrol engine car and save 50% on petrol cost.

Successful Conversion to Unleaded Gasoline in Thailand Philip Sayeg, 1998-01-01 The Government of Thailand within a five-year period (1991-95) introduced a series of initiatives that resulted in the elimination of leaded gasoline and reduction of ambient lead by a factor of 10. This report describes the strategies the government employed: educating about the dangers of airborne lead; setting a lower at-pump price for unleaded gasoline; helping the oil companies establish a system to distribute unleaded gasoline throughout the country; conducting monitoring and follow-up studies; and adjusting environmental regulations as necessary to support these policies.

Direct Natural Gas Conversion to Value-Added Chemicals Jianli Hu, Dushyant Shekhawat, 2020-09-24 Direct Natural Gas Conversion to Value-Added Chemicals comprehensively discusses all major aspects of natural gas conversion and introduces a broad spectrum of recent technological developments. Specifically, the book describes heterogeneous and homogeneous catalysis, microwave-assisted conversion, non-thermal plasma conversion, electrochemical conversion, and novel chemical looping conversion approaches. Provides an excellent benchmark resource for the industry and academics Appeals to experienced researchers as well as newcomers to the field, despite the variety of contributing authors and the complexity of the material covered Includes all aspects of direct natural gas conversion: fundamental chemistry, different routes of conversion, catalysts, catalyst deactivation, reaction engineering, novel conversion concepts, thermodynamics, heat and mass transfer issues, system design, and recent research and

development Discusses new developments in natural gas conversion and future challenges and opportunities This book is as an excellent resource for advanced students, technology developers, and researchers in chemical engineering, industrial chemistry, and others interested in the conversion of natural gas.

100% Hydrogen Conversion David Henry,2011-06-02 In the summer of 2010 Frederick W. Wood & David Seigler, released a video on YouTube which caused a viral stir on the internet. Their 14:30 minute video showed a 2004 Dodge truck that was modified with NEW high output Hydrogen Generator. They turned off the gas fuel system and ran the truck ONLY on HHO gas! They explained how the system worked in detailed, as they drove it around the block. They announced the truck just completed a 3000 mile trip and used about 12 gallons of H₂O (water). Fred W. Wood also said this vital information was available to the public as OPEN SOURCE technology for all to use. This is the INFORMATION! The information provided will allow engineers, mechanically or automotive incline persons to convert autos/trucks/SUVs from a gas to a 100% hydrogen base fuel system. You could even hire someone to convert your vehicle with this book! We provide step-by-step directions to build the HHO cell with color photos, theory of operation, technical instructions, installation example and schematics.

Compendium of Hydrogen Energy Frano Barbir,Angelo Basile,T. Nejat Veziroglu,2015-09-25
Compendium of Hydrogen Energy: Hydrogen Energy Conversion, Volume Three is the third part of a four volume series and focuses on the methods of converting stored hydrogen into useful energy. The

other three volumes focus on hydrogen production and purification; hydrogen storage and transmission; and hydrogen use, safety, and the hydrogen economy, respectively. Many experts believe that, in time, the hydrogen economy will replace the fossil fuel economy as the primary source of energy. Once hydrogen has been produced and stored, it can then be converted via fuel cells or internal combustion engines into useful energy. This volume highlights how different fuel cells and hydrogen-fueled combustion engines and turbines work. The first part of the volume investigates various types of hydrogen fuel cells, including solid oxide, molten carbonate, and proton exchange membrane. The second part looks at hydrogen combustion energy, and the final section explores the use of metal hydrides in hydrogen energy conversion. Highlights how different fuel cells and hydrogen-fueled combustion engines and turbines work Features input written by leading academics in the field of sustainable energy and experts from the world of industry Examines various types of hydrogen fuel cells, including solid oxide, molten carbonate, and proton exchange membrane Presents part of a very comprehensive compendium which, across four volumes, looks at the entirety of the hydrogen energy economy

Convert Your Car to Alcohol Keat B. Drane, 1980

Converted! Richie Waddell, 2011-09 Converted! is much more than an installation manual - although it serves as that as well. You will learn everything you need to know to take water and put it through a process called electrolysis to separate the hydrogen from the oxygen as you drive. It silently flows into your vehicle's combustion system and give better economy, a quieter cooler engine and less engine wear. This process, properly installed and tuned, is safe and effective because it creates hydrogen on demand and

radically improves the fuel economy of a vehicle. In language understandable by virtually anyone the book explains the process. There are many photos and illustrations to guide you through. You can purchase the parts you need on your own but Richie has done all the work for you and will send you a complete kit at a very reasonable price if you decide to go ahead and save money while you reduce the pollution in the environment.

Natural Gas Conversion IV M. de Pontes, R.L. Espinoza, C.P. Nicolaidis, J.H. Scholtz, M.S.

Scurrall, 1997-03-14 The Fourth International Natural Gas Conversion Symposium was attended by 180 delegates from 25 countries. Representation was evenly balanced between industry and academia. The opening address was delivered by Mr Roy Pithey, Chairman of South Africa's Central Energy Fund, who dealt with the importance and utilisation of natural gas in sub-Saharan Africa. Plenary lectures were presented by Professors E. Iglesia (Catalyst design and selectivity for F-T synthesis) and E.E. Wolf (Oxidative Coupling Methane). A number of keynote addresses were delivered: - Dr T. Fleisch (Amoco) described the use of DME as a transport fuel and the work which has been carried out in this area in collaboration with Haldor Topsoe - Professor L.D. Schmidt (Univ. of Minnesota) explained his work on the direct conversion of methane at high velocities - Dr B. Jager (SASTECH R & D) reported on the recent developments in slurry and fluidized bed F-T reactors as SASOL - Dr J. Rostrup-Nielsen (Haldor Topsoe) discussed the role of catalysis in the conversion of natural gas for power generation. Areas signalled for

further research were: direct conversion of methane to intermediate monomers; methanol conversion to higher alcohols; CO/H₂ conversion in a commercially viable route to higher alcohols; and CO/H₂ conversion to high quality gasoline. It is obvious that such developments would fit into the energy cycle which has moved from wood, to coal, to oil, to gas, and will most probably move to hydrogen.
