Consumer Behavior Towards Fuel Efficient Vehicles Charles River Associates,1978

Fuel Efficient Vehicles Montuk Atrib,2021 The cost of gas is more now than it has ever been. In many locations people are paying twice as much per gallon as they were two years ago. There is information circulating in the news and online that the prices are just going to continue to get higher. This has many consumers very concerned as they don't know what they should do. Certainly they can't afford to continue just paying the posted price at the pumps. Yet they can't stop going to work or about their daily routine that requires them to use a vehicle. A good strategy that many people are leaning towards more and more is more fuel efficient vehicles. These can get you where you need to go with less gas being used. Of course you want to be able to do so comfortably and safely as well as saving money. You have several options when it comes to fuel efficient vehicles so take your time to evaluate them and make a good choice. You may find a combination of them is the way to go. For example a motorcycle to get to work and then a fuel efficient hybrid car for the family to get around in. There are plenty of benefits to each of the various fuel efficiency vehicles as well as some disadvantages. We will go over each of these areas for them so you can make a well informed decision that works for you. The goal is to be safe, save money, and to be comfortable. You should be able to find at least one fuel efficient vehicle that can do this. Once you are done reading this you should have all the information you need to make a decision that is right for you.

Fuel Saving Wheels Peter Lewis,2011-04-11 The cost of gas is frightening to a lot of drivers nowadays that they're out to get the best device, the best method, the best whatever, that will guarantee better fuel economy. So, it makes a lot of sense to make an investment on a fuel saving vehicle, right? Getting the best deal on your wheels in terms of better gas mileage and lesser fuel consumption has huge-savings benefits. Think of it this way. You save on fuel. You save money on the cost of fuel. And, you help save the planet you're living in. That's a very cool deal for wheels that can help get you anywhere. Shopping for a fuel efficient vehicle might be a bit intimidating for the first-time buyer. There is a wide-range to select from out in the market. Cars are definitely not the limit. There are a lot of vehicle-types on wheels that can equally provide fuel economy. When buying a fuel efficient vehicle, you should take into account safety and comfort along with fuel savings. There is a lot more to consider when choosing vehicles that are fuel savers. Use this book to help you make better selections.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2, 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Consumers Need More Reliable Automobile Fuel Economy Data United States. General Accounting Office, 1981 Every new automobile sold in the United States has a label showing its tested fuel economy. In addition, all fuel economy test results are published annually to encourage the production and purchase of more fuel-efficient automobiles. Consumers are skeptical, however, because their on-road experience often falls far short of the tested mileage figures.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of

Technologies for Improving Light-Duty Vehicle Fuel Economy,2011-06-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

The World's Most Fuel Efficient Vehicle Jean-Jacques Santin,Christopher H. Onder,Jérôme Bernard,Dominik Isler,Pius Kobler,Florian Kolb,Nicolas Weidmann,Lino Guzzella,2007 The goal of the PAC-Car project, a joint undertaking of ETH Zurich and its partners, was to build a vehicle powered by a hydrogen fuel cell system that uses as little fuel as possible. PAC-Car II set a new world record in fuel efficient driving (the equivalent of 5,385 km per liter of gasoline) during the Shell Eco-marathon in Ladoux (France) on June 26, 2005. This book, addressed to graduate students, engineering professors and others interested in fuel economy contests, is the first to summarize the issues involved when designing and constructing a vehicle for fuel economy competitions. It describes the adventure of developing the PAC-Car II and offers some specific technical advice for anyone who wants to design an ultra-lightweight land vehicle, whatever its energy source. PAC-Car was a joint project of ETH Zurich and partners from academia and industry. The goal was to build a vehicle powered by a fuel cell system that uses as little fuel as possible. PAC-Car II set a new world record in fuel efficient driving (5,385 km per liter of petrol equivalent) during the Shell Eco-marathon in Ladoux (France) on June 26, 2005. This book is the first to summarize the design and construction issues of a vehicle for fuel economy contests. It deals with the adventure of developing this world-record vehicle and provides some specific technical tips. It will help anyone who is designing an ultra lightweight land vehicle, whatever its source of energy (thermal engine, human power, solar panels), and/or those who are interested in fuel cell applications. The book addresses graduate students and teachers of engineering disciplines as well as other people interested in fuel economy contests. Content: fuel economy competitions, design phase of a fuel economy vehicle, tires, vehicle behavior, aerodynamics, vehicle body structure, wheels, front axle and steering system, powertrain, fuel cell system, driving strategy, conclusion and

outlook.
