Oil Supply and Petrol Prices Stewart Smith,2008 The transport sector consumes 41 percent of final energy consumption in Australia, with the demand for transport energy growing at about 2.4 percent per year. Road vehicles moving passengers and freight account for 75 percent of transport fuel use. The Australian and international economy are deeply reliant on the supply of abundant petroleum resources at reasonable prices. However, significant challenges are confronting the petroleum and transport industry, both domestically and internationally. The first of these is tight supplies of crude oil, coupled with a growing market base of emerging economies. The second is the necessity to reduce greenhouse gas emissions to prevent dangerous climate change. This paper focuses on the former issue, and explores the factors contributing to the price of petrol in Australia.--Executive summary.

The Indonesian Economy in Transition Hal Hill,Siwage Dharma Negara,2019-03-06 By any indicator, Indonesia, the fourth most populous nation on earth, is a development success story. Yet 20 years after a deep economic and political crisis, it is still in some respects an economy in transition. The country recovered from the 1997-98 crisis and navigated the path from authoritarian to democratic rule surprisingly quickly and smoothly. It survived the 2008-09 global financial crisis and the end of the China-driven commodity super boom in 2014 with little difficulty. It is now embarking on its fifth round of credible national elections in the democratic era. It is in the process of graduating to the upper middle-income ranks. But, as the 25 contributors to this comprehensive and compelling volume document, Indonesia also faces many daunting challenges — how to achieve faster economic growth along with more attention to environment sustainability, how to achieve more equitable development outcomes, how to develop and nurture stronger institutional foundations, and much else. “This is a timely and much-needed book. There are very few recent books on Indonesia with such a comprehensive analysis of not just mainstream economic policies, but also most importantly the key issues of human capital, inequality, social welfare, labour, food security and natural resource management. This book will not only be crucial for policy discourse but for all stakeholders who care about Indonesia making the transition not only to a high-income economy, but an inclusive one.” — Mari Pangestu, Faculty of Economics and Business, University of Indonesia “The Indonesian Economy in Transition: Policy Challenges in the Jokowi Era and Beyond is one of the most important books that discusses the Indonesian economy post-Asian Financial Crisis. A must-read for anyone who wants to understand contemporary Indonesian economy.” — M. Chatib Basri, former Minister of Finance of Indonesia

The Economics of the Gas Supply Industry Malcolm Abbott,2016-05-12 In recent years, natural gas has become a major source of energy, with trade across borders increasing through both pipelines and as Liquefied Natural Gas (LNG). Owing to this global development, this book traces the development of the gas supply industry, from localised to national industries and national industries to a major global industry. It looks at the basic economics and origins of the industry, as well as the role of the government in its development and relation to international markets. The book highlights certain economic characteristics such as the industry's vertical and horizontal structure, the composition of consumer demand and the role of government in safety, planning and investment. With the understanding of the industry's long term development, the book helps to illustrate the relationship between natural gas producers and importers of LNG. This book would be of interest to scholars majoring in resource economics and energy economics, as well as to international practitioners in the natural gas market.

Geographies of Australian Heritages Roy Jones,Brian J. Shaw,2017-11-30 In any settler and/or postcolonial society, heritage is a complex and contested topic that involves indigenous, imperial and other migrant components. In Australia, this situation is compounded by the unique characteristics of the country's natural environment, the considerable diversity of its migrant intake and the demographic and technological imbalances between its indigenous and settler populations. This volume brings together internationally recognized academics and emerging scholars, whose expertise extends through the areas of tourism, planning, heritage management, environmental studies and state and local government. Through a representative set of case studies from across the country's states and capital cities, the contributors demonstrate the range and diversity of heritage issues currently confronting Australia, and consider possible ways of resolving these.

The Great Energy Debate Kenneth W. Clements,Robert A. Greig,Qiang Ye,2002 Western Australia is one of the world's great energy and mineral provinces, and much of its economic history has been shaped by the interaction between mineral-industry developments and government policy. A central feature of this experience has been avoidance of market mechanisms, and excessive reliance on detailed regulation to achieve policy goals. With decisions about future energy policy imminent, The Great Energy Debate provides a timely analysis of the importance of energy costs to the whole Western Australian economy. It lays down benchmarks against which policy proposals can be measured, and raises questions such as: How much competition (and regulation) should there be in the electricity industry to promote the future development of the State? What are the linkages between large mineral, and mineral-processing projects and the rest of the State's economy? How can Western Australia have a competitive and cost-effective energy sector? The Great Energy Debate not only examines future energy projects, but also makes some provocative proposals for the reform of energy policy in Western Australia.
