**Completion, Volume 2/** Jindrich Toman,2013-01-01 Roman Jakobson's writings range over the entire field of general linguistics, as well as embracing Slavic linguistics and literature theory. Jakobson has had a tremendous influence on the development of linguistic theory. He was a founder of and prime mover in the Prague Linguistic Circle. On the basis of the new structuralist concepts, he set forth bold theories of general linguistics and illustrated them with brilliant demonstrations based on Slavic and other languages. Taking a leading role in the elucidation of the structural linguistic field of phonology, Jakobson used these insights to develop new trends in historical phonology. Altogether, his linguistics appears to incorporate the technical design of modern theoretical concepts, but at the same time transcends purely formal modeling through its interdisciplinary focus upon historical and poetic matters. Jakobson was enormously successful in presenting innovative theoretical insights and relating them to possible practical applications. Specifically, his work on the general processes of language acquisition and loss, on child language and aphasia, opened up entirely new methods for linguists and doctors alike. The series *Selected Writings* represents the whole range of Roman Jakobson's field of research.

*Object-Orientation, Abstraction, and Data Structures Using Scala, Second Edition* Mark C. Lewis,Lisa L. Lacher,2017-01-06 Praise for the first edition: The well-written, comprehensive book...[is] aiming to become a de facto reference for the language and its features and capabilities. The pace is appropriate for beginners; programming concepts are introduced progressively through a range of examples and then used as tools for building

applications in various domains, including sophisticated data structures and algorithms...Highly recommended. Students of all levels, faculty, and professionals/practitioners.? —D. Papamichail, University of Miami in CHOICE Magazine ?

Mark Lewis' Introduction to the Art of Programming Using Scala?was the first textbook to use Scala for introductory CS courses. Fully revised and expanded, the new edition of this popular text has been divided into two books. Object-Orientation, Abstraction, and Data Structures Using Scala, Second Edition is intended to be used as a textbook for a second or third semester course in Computer Science. The Scala programming language provides powerful constructs for expressing both object orientation and abstraction. This book provides students with these tools of object orientation to help them structure solutions to larger, more complex problems, and to expand on their knowledge of abstraction so that they can make their code more powerful and flexible. The book also illustrates key concepts through the creation of data structures, showing how data structures can be written, and the strengths and weaknesses of each one. Libraries that provide the functionality needed to do real programming are also explored in the text, including GUIs, multithreading, and networking. The book is filled with end-of-chapter projects and exercises, and the authors have also posted a number of different supplements on the book website. Video lectures for each chapter in the book are also available on YouTube. The videos show construction of code from the ground up and this type of live coding is invaluable for learning to program, as it allows students into the mind of a more experienced programmer, where they can see the thought processes associated with the development of the code.

About the Authors  
Mark Lewis is an Associate Professor at Trinity University. He teaches a number of different courses, spanning from first semester introductory courses to advanced seminars. His research interests included simulations and modeling, programming languages, and numerical modeling of rings around planets with nearby moons.? Lisa Lacher is an Assistant Professor at the University of Houston, Clear Lake with over 25 years of professional software development experience. She teaches a number of different courses spanning from first semester introductory courses to graduate level courses. Her research interests include Computer Science Education, Agile Software Development, Human Computer Interaction and Usability Engineering, as well as Measurement and Empirical Software Engineering.
