John James Bond, 1866

*Ecclesiastical History* Gelasius of Caesarea, 2017-12-18 Gelasius, the Nicene bishop of Caesarea Maritima for roughly the last third of the fourth century, has been overshadowed by his more famous uncle and patron Cyril of Jerusalem. Gelasius' works are preserved only fragmentarily in later authors. The most important of his writings was a church history, which supplemented and continued that of his eminent predecessor Eusebius. Later ecclesiastical historians and hagiographers, such as Rufinus of Aquileia, drew on Gelasius' history extensively, although usually without attribution. It furnished them with a model for Nicene historiography and with material on topics such as the youth of the emperor Constantine, the discovery of the True Cross in Jerusalem, the Council of Nicaea, and the beginnings of Christianity in Ethiopia and Georgia. The fragments of Gelasius' *Ecclesiastical History* are presented here systematically for the first time. They are accompanied by the fragments of his doctrinal writings as well as all known testimonia about the bishop's life and work. The edition is introduced by a thorough discussion of the sources and includes a facing English translation and notes.

*ABC Dictionary of Sino-Japanese Readings* Victor H. Mair, 2016-07-31 The significance of Japanese-language scholarship on China cannot be overstated. Yet much of it is largely untapped by China scholars in both the West and China, in part because they are unfamiliar with the Japanese pronunciation of Chinese characters. Even those who know Japanese are frequently frustrated when seeking an obscure reading of a personal or place name. The purpose of this volume is to enable Sinologists and others involved in Chinese studies to access entries in Japanese reference works dealing with China without going through the time-consuming process of looking up characters by radical and stroke. For users of this dictionary, it is a simple matter to find a character by looking it up by its alphabetical pinyin pronunciation. Having located it, the user can go directly to the item in Japanese reference works. The Dictionary includes more than 13,072 entries not only in Chinese characters and their Sino-Japanese (ondoku/onyomi) readings, but also the Japanese (kundoku/kunyomi) readings. The romanized Japanese readings will assist in correctly transcribing Japanese names, such as the names of Japanese publishers and authors, and the technical terms employed by Japanese in their writings on China. These features will also give those familiar with pinyin greater access to material on Japanese history and culture. The ABC Dictionary of Sino-Japanese Readings will be a boon to Sinologists and others interested in the study of China.

**Higher-Order Algebra, Logic, and Term Rewriting** J. Heering,1994-07-28 This volume contains the final revised versions of the best papers presented at the First International Workshop on Higher-Order Algebra, Logic, and Term Rewriting (HOA '93), held in Amsterdam in September 1993. Higher-Order methods are increasingly applied in functional and logic programming languages, as well as in specification and verification of programs and hardware. The 15 full papers in this volume are devoted to the algebra and model theory of higher-order languages, computational logic techniques including resolution and term rewriting, and specification and verification case studies; in total they provide a competently written overview of current research and suggest new research directions in this vigorous area.

**Mineral Reference Manual** Nickel,Nichols,2012-12-06 of a Roman numeral, an alphabetic character and an Arabic numeral. This designation constitutes the classification symbol based on the system in Mineralogische Tabellen by Hugo Strunz (a summary is shown in Appendix A). The Roman numeral and alphabetical character divide the minerals into broad groups based mainly on chemistry, with the silicate subdivision based on silicate polymerization. The Arabic numeral specifies the group to which a particular mineral belongs; a group is defined mainly on the basis of crystallographic similarities, but minerals with similar chemical compositions are sometimes included in the group even though they do not exhibit crystallographic affinities with other members of the class. The next entry gives the name of the author of the mineral and the date of its introduction into the literature. In some cases where a mineral has been redescribed or the name has been changed from the original, this entry will reflect the person and time when this was done. This is followed by a reference to what we have tried to make the latest, or most authoritative, literature report. We have attempted to include at least one reference for each species. If there is a second reference following the first, it will be a reference to the determination of the crystal structure. The abbreviations used in the references are given in Appendix B. The final entry, when present, gives the names of similar or related minerals and is preceded by the designation See also .

**Structure Theory for Canonical Classes of Finite Groups** Wenbin Guo,2015-04-23 This book offers a systematic introduction to recent achievements and development in research on the structure of finite non-simple groups, the theory of classes of groups and their applications. In particular, the related systematic theories are considered and some new approaches and research methods are described – e.g., the F-hypercenter of groups, X-permutable subgroups, subgroup functors, generalized supplementary subgroups, quasi-F-group, and F-cohypercenter for Fitting classes. At the end of each chapter, we provide relevant supplementary information and introduce readers to selected open problems.

**Thirty Essays on Geometric Graph Theory** János Pach,2012-12-15 In many applications of graph theory, graphs are regarded as geometric objects drawn in the plane or in some other surface. The traditional methods of abstract graph theory are often incapable of providing satisfactory answers to questions arising in such applications. In the past couple of decades, many powerful new combinatorial and topological techniques have been developed to

tackle these problems. Today geometric graph theory is a burgeoning field with many striking results and appealing open questions. This contributed volume contains thirty original survey and research papers on important recent developments in geometric graph theory. The contributions were thoroughly reviewed and written by excellent researchers in this field.

**Graph-Theoretic Concepts in Computer Science** Petr Kolman, Jan Kratochvíl, 2011-12-02 This book constitutes the revised selected papers of the 37th International Workshop on Graph-Theoretic Concepts in Computer Science, WG 2011, held at Teplá Monastery, Czech Republic, in June 2011. The 28 revised papers presented were carefully reviewed and selected from 52 submissions. The workshop aims at merging theory and practice by demonstrating how concepts from graph theory can be applied to various areas in computer science, and by extracting new graph theoretic problems from applications.

Cyclura Jeffrey Lemm, Allison C. Alberts, 2011-08-09 Rock iguanas of the West Indies are considered to be the most endangered group of lizards in the world. They are a flagship species in the Caribbean and on most islands are the largest native land animals. Unfortunately, human encroachment and introduced animals have brought this species to the brink of extinction. *Cyclura: Natural History, Husbandry, and Conservation of the West Indian Iguanas* is the first book to combine the natural history and captive husbandry of these remarkable reptiles, while at the same time outlining the problems researchers and conservationists are battling to save these beautiful, iconic animals of the Caribbean islands. Authors Jeffrey Lemm and Allison Alberts have been studying West Indian iguanas for nearly 20 years in the wild and in captivity; their experiences with wild iguanas and their exquisite photos of these charismatic lizards in the wild make this book a must-have for reptile researchers, academics and enthusiasts, as well as anyone interested in nature and conservation. Includes chapters with contributions by leading experts on rock iguana taxonomy, nutrition, and diseases Features color photos of all taxa, including habitat and captive shots Provides easily understandable and usable information gleaned from experience and hands-on reptile research

*New York Magazine* , 1983-08-08 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

**Geometric Methods in Group Theory** AMS Special Session Geometric Group Theory, 2005 This volume presents articles by speakers and participants in two AMS special sessions, Geometric Group Theory and Geometric Methods in Group Theory, held respectively at Northeastern University (Boston, MA) and at Universidad de Sevilla (Spain). The expository and survey articles in the book cover a wide range of topics, making it suitable for researchers and graduate students interested in group theory.

Combinatorial Algebraic Topology Dmitry Kozlov, 2008-01-08 This volume is the first comprehensive treatment of

combinatorial algebraic topology in book form. The first part of the book constitutes a swift walk through the main tools of algebraic topology. Readers - graduate students and working mathematicians alike - will probably find particularly useful the second part, which contains an in-depth discussion of the major research techniques of combinatorial algebraic topology. Although applications are sprinkled throughout the second part, they are principal focus of the third part, which is entirely devoted to developing the topological structure theory for graph homomorphisms.

**Rings, Modules, Algebras, and Abelian Groups** Alberto Facchini, Evan Houston, Luigi Salce, 2020-02-10 Rings, Modules, Algebras, and Abelian Groups summarizes the proceedings of a recent algebraic conference held at Venice International University in Italy. Surveying the most influential developments in the field, this reference reviews the latest research on Abelian groups, algebras and their representations, module and ring theory, and topological

**From Ultra Rays to Astroparticles** Brigitte Falkenburg, Wolfgang Rhode, 2012-12-30 The scope of the book is to give an overview of the history of astroparticle physics, starting with the discovery of cosmic rays (Victor Hess, 1912) and its background (X-ray, radioactivity). The book focusses on the ways in which physics changes in the course of this history. The following changes run parallel, overlap, and/or interact: - Discovery of effects like X-rays, radioactivity, cosmic rays, new particles but also progress through non-discoveries (monopoles) etc. - The change of the description of nature in physics, as consequence of new theoretical questions at the beginning of the 20th century, giving rise to quantum physics, relativity, etc. - The change of experimental methods, cooperations, disciplinary divisions. With regard to the latter change, a main topic of the book is to make the specific multi-disciplinary features of astroparticle physics clear.

*The Strongest Magnetic Fields in the Universe* Vasily S. Beskin, A. Balogh, Maurizio Falanga, Maxim Lyutikov, Sandro Mereghetti, Tsvi Piran, R.A. Treumann, 2016-01-29 This volume extends the ISSI series on magnetic fields in the Universe into the domain of what are by far the strongest fields in the Universe, and stronger than any field that could be produced on Earth. The chapters describe the magnetic fields in non-degenerate strongly magnetized stars, in degenerate stars (such as white dwarfs and neutron stars), exotic members called magnetars, and in their environments, as well as magnetic fields in the environments of black holes. These strong fields have a profound effect on the behavior of matter, visible in particular in highly variable processes like radiation in all known wavelengths, including Gamma-Ray bursts. The generation and structure of such strong magnetic fields and effects on the environment are also described.

Magnetic Fields in Diffuse Media Alexander Lazarian, Elisabete M. de Gouveia Dal Pino, Claudio Melioli, 2014-11-14 This volume presents the current knowledge of magnetic fields in diffuse astrophysical media. Starting with an overview of 21st century instrumentation to observe astrophysical magnetic fields, the chapters cover observational techniques, origin of magnetic fields, magnetic turbulence, basic processes in magnetized fluids, the role of magnetic fields for cosmic rays, in the interstellar medium and for star formation. Written by a group

of leading experts the book represents an excellent overview of the field. Nonspecialists will find sufficient background to enter the field and be able to appreciate the state of the art.
