Radio Spectrum Management Haim Mazar (Madjar), 2016-08-29 This book presents the fundamentals of wireless communications and services, explaining in detail what RF spectrum management is, why it is important, which are the authorities regulating the use of spectrum, and how is it managed and enforced at the international, regional and national levels. The book offers insights to the engineering, regulatory, economic, legal, management policy-making aspects involved. Real-world case studies are presented to depict the various approaches in different countries, and valuable lessons are drawn. The topics are addressed by engineers, advocates and economists employed by national and international spectrum regulators. The book is a tool that will allow the international regional and national regulators to better manage the RF spectrum, and will help operators and suppliers of wireless communications to better understand their regulators.

The Art and Science of Ultrawideband Antennas Hans Schantz, 2015 This comprehensive treatment of ultrawideband (UWB) antennas and time-domain microwave engineering serves as an invaluable practical reference for anyone involved in antenna and RF design work. This authoritative volume enables readers to select the proper UWB antennas for their applications, design work. This authoritative volume enables readers to select the proper UWB antennas for their applications, design and analyze UWB antennas, and integrate these antennas in an RF system. By applying time-domain thinking to problems of practical interest, the reader will not only learn how to build and analyze antennas, but also understand them at the most fundamental level. This second edition is updated and expanded throughout, providing readers with a history of antennas, numerous new problem sets and examples, along with new information on plotting time-domain field lines, time-domain reflectometry, matching techniques, and more. This book also addresses system issues like spectral control and antenna efficiency. Book jacket.

Emerging Technologies for Nurses Whende M. Carroll, MSN, RN-BC, 2020-02-01 Learn and innovate with the latest technologies in nursing and healthcare! The first text of its kind in nursing, this book provides up-to-date information on innovative, smart technologies that nurses can use in clinical and nonclinical settings to keep up with the changing face of healthcare. This compelling guide will provide you with information about exciting areas of technology that have great potential to improve patient care. Subjects include big data, artificial intelligence, virtual and augmented realities, connected technologies, and precision health. There is also discussion of the shift of healthcare delivery into the community, with an outlook on improving outcomes and enhancing practice. Each chapter focuses on developing competency in current and future real-world applications of emerging technologies. Early chapters describe how to utilize new tools, processes, models, and products to serve the quadruple aim of better managing populations, decreasing costs, and enhancing both the patient's and the clinician's experience. The culture of innovation coincides with the ever-changing politics of healthcare in later chapters, which then evolves into the entrepreneurial opportunities for nurses. This text is an essential introduction for all practicing nurses, nurse leaders, and nurses teaching health information technology or informatics courses. Key Features: Written by nurses for nurses The latest information on emerging health information technology and associated nursing implications Compelling cases show the

dramatic effect of innovations on value-based care Learn how applying novel technologies can improve patient care Qualified instructors have access to supplementary materials, including PowerPoint slides and an Instructor's Manual

Introduction to Information Systems R. Kelly Rainer, Efraim

Turban, 2008-01-09 WHATS IN IT FOR ME? Information technology lives all around us-in how we communicate, how we do business, how we shop, and how we learn. Smart phones, iPods, PDAs, and wireless devices dominate our lives, and yet it's all too easy for students to take information technology for granted. Rainer and Turban's Introduction to Information Systems, 2nd edition helps make Information Technology come alive in the classroom. This text takes students where IT lives-in today's businesses and in our daily lives while helping students understand how valuable information technology is to their future careers. The new edition provides concise and accessible coverage of core IT topics while connecting these topics to Accounting, Finance, Marketing, Management, Human resources, and Operations, so students can discover how critical IT is to each functional area and every business. Also available with this edition is WileyPLUS - a powerful online tool that provides instructors and students with an integrated suite of teaching and learning resources in one easy-to-use website. The WileyPLUS course for Introduction to Information Systems, 2nd edition includes animated tutorials in Microsoft Office 2007, with iPod content and podcasts of chapter summaries provided by author Kelly Rainer.

A Rambling Wreck Hans G Schantz, 2019-10 There's no partial credit on a question of life and death Off to Georgia Tech for the education he'll need to defeat the guardians of the hidden truth, Peter discovers the battle for the future is being fought right on campus. Now he has to infiltrate a conspiracy, find new allies, and thwart a takeover of the school. Peter's most challenging final exam has only one question: Can a Rambling Wreck stop the Cabal? And a failing grade will be his last. Conservative Libertarian Fiction Alliance 2018 Book of the Year Finalist It's sort of like what might happen if one of Heinlein's juvenile heroes (say Kip from Have Spacesuit Will Travel) was thrust into the modern era and was forced to use SJWs Always Lie as his freshman orientation guide while battling the Black Hats. -Orion's Cold Fire This is really such an original series of books that it's hard to describe it properly. Like Da Vinci Code meets Harry Potter meets Cryptonomicon by way of Michael Crichton. The author really knows his science and tech AND can spin a fantastic tale. -Bookhorde

The Brave and the Bold Hans G Schantz, 2019-10 Where we go one, we go all When the Civic Circle tries to embroil the U.S. in a senseless war, Pete must leverage his summer intern position to infiltrate their Social Justice Leadership Forum on Jekyll Island, and disrupt their plans. The danger - and the opportunity - are far greater than he imagines. The sinister power behind the Cabal - a power that aims to reshape society, destroy our civilization, and cast humanity into bondage - tolerates no rivals. Deep within the conspiracy's stronghold Pete discovers not only the secrets by which they retain their power, but also a crucial vulnerability that could cripple the Cabal with one decisive blow. With his plans in jeopardy and his life at risk, Pete must forge an unlikely alliance of rivals, turn The Civic Circle against itself, expose their secrets, and end their threat once and for all. The ultimate struggle for the ultimate stakes hinges on one simple question:

Will fortune favor the brave and the bold?

RFID Applied Jerry Banks, Manuel A. Pachano, Les G. Thompson, David Hanny, 2007-03-30 Radio frequency identification or RFID is a broad-based technology that impacts business and society. With the rapid expansion of the use of this technology in everything from consumer purchases to security ID tags, to tracking bird migration, there is very little information available in book form that targets the widest range of the potential market. But this book is different! Where most of the books available cover specific technical underpinnings of RFID or specific segments of the market, this co-authored book by both academic and industry professionals, provides a broad background on the technology and the various applications of RFID around the world. Coverage is mainly non-technical, more business related for the broadest user base, however there are sections that step into the technical aspects for advanced, more technical readers.

The Manual of Museum Learning Brad King, Barry Lord, 2015-12-15 Museum learning is a vital component of the lifelong-learning process. In this new edition of The Manual of Museum Learning, leading museum education professionals offer practical advice for creating successful learning experiences in museums and related institutions (such as galleries, zoos, and botanic gardens) that can attract and intrigue diverse audiences. The original Manual of Museum Learning was published in 2007. The editors have totally rethought this new edition. This second edition focuses on the ways museum staffs (and the departments for which they work) can facilitate the experience in a way that capitalizes on their individual institutional strengths. The goal of this new edition is to provide museums with guidance in developing a strategic approach to their learning programs. There is a close connection between institution-wide strategic planning – where an institution decides what course and direction it will take for a five to seven-year period – and its approach to museum learning. One size does not fit all, and what each museum is (or aspires to be) will affect its individual approach. Thus there are many routes for museums to take, many alternative ways for them to play this role. No one museum can be all things to all prospective learners; they will be better suited to some approaches than to others. This new edition identifies these approaches and enables museums to find the paths for which they are individually best suited, to help them identify their own unique approaches to facilitating museum learning. Each one's mission and vision, its relationships with institutional and public stakeholders, local cultural and market factors, its individual collection and programmatic strengths, its financial position – all of these things matter. This second edition aims to help each museum find the right approach to learning for its unique situation by showing them the range of museum “personalities” in terms of their being learning institutions, what constitutes each type, and what the implications are of choosing one or another approach for a particular museum. A major theme of the 2nd edition of The Manual of Museum Learning is museum as connector; the ways in which museums are facilitating self-directed learning by connecting people with resources. Not all will connect audiences with learning vehicles in the same way. If museum learning is affective learning, then it is the role of the museum to connect its visitors, program participants and others who benefit from its knowledge to the learning resources that best suit the institution's strengths and matches them to the learning needs of the museum's audiences.

By connecting users to the resources they are most interested in, or which best suit each individual's particular learning styles, museums are at their best when they empower individuals to design their own learning experience in ways that resonate best with each individual.

Healthcare Digital Transformation Edward W. Marx, Paddy

Padmanabhan, 2020-08-02 This book is a reference guide for healthcare executives and technology providers involved in the ongoing digital transformation of the healthcare sector. The book focuses specifically on the challenges and opportunities for health systems in their journey toward a digital future. It draws from proprietary research and public information, along with interviews with over one hundred and fifty executives in leading health systems such as Cleveland Clinic, Partners, Mayo, Kaiser, and Intermountain as well as numerous technology and retail providers. The authors explore the important role of technology and that of EHR systems, digital health innovators, and big tech firms in the ongoing digital transformation of healthcare. Importantly, the book draws on the accelerated learnings of the healthcare sector during the COVID-19 pandemic in their digital transformation efforts to adopt telehealth and virtual care models. Features of this book: Provides an understanding of the current state of digital transformation and the factors influencing the ongoing transformation of the healthcare sector. Includes interviews with executives from leading health systems. Describes the important role of emerging technologies; EHR systems, digital health innovators, and more. Includes case studies from innovative health organizations. Provides a set of templates and frameworks for developing and implementing a digital roadmap. Based on best practices from real-life examples, the book is a guidebook that provides a set of templates and frameworks for digital transformation practitioners in healthcare.

Mapping and the Citizen Sensor Giles Foody, Linda See, Steffen Fritz, Peter Mooney, Ana-Maria Olteanu-Raimond, Cidália Costa Fonte, Vyron

Antoniou, 2017-09-11 Maps are a fundamental resource in a diverse array of applications ranging from everyday activities, such as route planning through the legal demarcation of space to scientific studies, such as those seeking to understand biodiversity and inform the design of nature reserves for species conservation. For a map to have value, it should provide an accurate and timely representation of the phenomenon depicted and this can be a challenge in a dynamic world. Fortunately, mapping activities have benefitted greatly from recent advances in geoinformation technologies. Satellite remote sensing, for example, now offers unparalleled data acquisition and authoritative mapping agencies have developed systems for the routine production of maps in accordance with strict standards. Until recently, much mapping activity was in the exclusive realm of authoritative agencies but technological development has also allowed the rise of the amateur mapping community. The proliferation of inexpensive and highly mobile and location aware devices together with Web 2.0 technology have fostered the emergence of the citizen as a source of data. Mapping presently benefits from vast amounts of spatial data as well as people able to provide observations of geographic phenomena, which can inform map production, revision and evaluation. The great potential of these developments is, however, often limited by concerns. The latter span issues from the nature of the citizens through the way data are collected and shared to the quality and trustworthiness of the data. This

book reports on some of the key issues connected with the use of citizen sensors in mapping. It arises from a European Co-operation in Science and Technology (COST) Action, which explored issues linked to topics ranging from citizen motivation, data acquisition, data quality and the use of citizen derived data in the production of maps that rival, and sometimes surpass, maps arising from authoritative agencies.

War Demons Russell Newquist, 2018-11-05 When he came home, so did they... Driven by vengeance, Michael Alexander enlisted in the Army the day after 9/11. Five years later, disillusioned and broken by the horrors he witnessed in Afghanistan, Michael returns home to Georgia seeking to begin a new life. But he didn't come alone. Something evil followed him, and it's leaving a path of destruction in its wake. The police are powerless. The Army has written Michael off. Left to face down a malevolent creature first encountered in the mountains of Afghanistan, he'll rely on his training, a homeless prophet, and estranged family members from a love lost... But none of them expected the dragon. Jim Butcher's Harry Dresden collides with Larry Correia's Monster Hunter International in this supernatural thriller that goes straight to Hell!

Microwave Tomography Sima Noghanian, Abas Sabouni, Travis Desell, Ali Ashtari, 2014-07-08 This book provides a detailed overview on the use of global optimization and parallel computing in microwave tomography techniques. The book focuses on techniques that are based on global optimization and electromagnetic numerical methods. The authors provide parallelization techniques on homogeneous and heterogeneous computing architectures on high performance and general purpose futuristic computers. The book also discusses the multi-level optimization technique, hybrid genetic algorithm and its application in breast cancer imaging.

Indoor Positioning and Navigation Simon Tomazič, 2021-11-12 In recent years, rapid development in robotics, mobile, and communication technologies has encouraged many studies in the field of localization and navigation in indoor environments. An accurate localization system that can operate in an indoor environment has considerable practical value, because it can be built into autonomous mobile systems or a personal navigation system on a smartphone for guiding people through airports, shopping malls, museums and other public institutions, etc. Such a system would be particularly useful for blind people. Modern smartphones are equipped with numerous sensors (such as inertial sensors, cameras, and barometers) and communication modules (such as WiFi, Bluetooth, NFC, LTE/5G, and UWB capabilities), which enable the implementation of various localization algorithms, namely, visual localization, inertial navigation system, and radio localization. For the mapping of indoor environments and localization of autonomous mobile systems, LIDAR sensors are also frequently used in addition to smartphone sensors. Visual localization and inertial navigation systems are sensitive to external disturbances; therefore, sensor fusion approaches can be used for the implementation of robust localization algorithms. These have to be optimized in order to be computationally efficient, which is essential for realtime processing and low energy consumption on a smartphone or robot.

Product Lifecycle Management and the Industry of the Future José Ríos, Alain Bernard, Abdelaziz Bouras, Sebti Foufou, 2017-12-19 This book constitutes the refereed post-conference proceedings of the 14th IFIP WG 5.1 International Conference on Product Lifecycle Management, PLM 2017, held in Seville, Spain,

in July 2017. The 64 revised full papers presented were carefully reviewed and selected from 78 submissions. The papers are organized in the following topical sections: PLM maturity, implementation and adoption; PLM for digital factories; PLM and process simulation; PLM, CAX and knowledge management; PLM and education; BIM; cyber-physical systems; modular design and products; new product development; ontologies, knowledge and data models; and Product, Service, Systems (PSS).
