A Galaxy Unknown Thomas DePrima,2010-08-10 June 6th, 2267 - A life-pod, missed by rescuers following the mysterious explosion of a Space Command vessel a decade earlier, is discovered by a passing freighter in deep space. A young officer, still cocooned in stasis sleep, is found inside. When revived, Ensign Jenetta Carver learns of the lawlessness that now suffuses interstellar space. Pirates and slavers seem able to attack and pillage with impunity. Space Command has committed its full resources to stopping the anarchy, but criminal groups have grown immensely powerful. Although determined to rejoin SC as soon as possible, Jenetta is captured by pirates before that can happen. At first she fears for her life, but when she's indelibly marked as a pleasure slave, she gets mad; fighting mad. And when they tamper with her DNA to make her appear sexier, she gets even madder; killing mad.Can a petite blonde, cut off from Space Command, create more mayhem among the criminal elements than a full decade of SC effort? You'd better believe it!

A Galaxy Unknown Thomas DePrima,2011 A young ensign, recently graduated from the Northern Hemisphere Space Academy, is awakened abruptly in the middle of the night by alarms, flashing lights, and dire messages to abandon ship. The petite blonde pulls on some clothes and races through the spaceship in a desperate search for an available life pod-- but it appears all have already departed. So begins the epic story of Jenetta Carver. Get a tight grip on your book and prepare for an exciting adventure like few others because Jenetta is ready to take names and kick butts from one end of the galaxy to the other. She may be small, but she has an intellect as large as Colossus of Rhodes and makes General Sun-Tzu look like an amateur military enthusiast.

UNKNOWN FACTS ABOUT GALAXY SIDDHESH CHINDARKAR,2023-05-10 Galaxies come in different shapes and sizes, ranging from small irregular galaxies with only a few million stars to massive elliptical galaxies with trillions of stars. The most common type of galaxy is the spiral galaxy, which has a central bulge surrounded by a disk of gas, dust, and stars that spiral outwards. The Milky Way, our home galaxy, is a spiral galaxy.

The Great Unknown Marcus du Sautoy,2018-04-10 “An engaging voyage into some of the great mysteries and wonders of our world. --Alan Lightman, author of Einstein’s Dream and The Accidental Universe “No one is better at making the recondite accessible and exciting.” —Bill Bryson Brain Pickings and Kirkus Best Science Book of the Year Every week seems to throw up a new discovery, shaking the foundations of what we know. But are there questions we will never be able to answer—mysteries that lie beyond the predictive powers of science? In this captivating exploration of our most tantalizing unknowns, Marcus du Sautoy invites us to consider the problems in cosmology, quantum physics, mathematics, and neuroscience that continue to bedevil scientists and creative thinkers who are at the forefront of their fields. At once exhilarating, mind-bending, and compulsively readable, The Great Unknown challenges us to consider big questions—about the nature of consciousness, what came before the big bang, and what lies beyond our horizons—while taking us on a virtuoso tour of the great breakthroughs of the past and celebrating the men and women who dared to tackle the seemingly impossible and had the imagination to come up with new ways of seeing the world.

On the Shores of the Unknown Joseph Silk,2005-01-03 Publisher Description

The Properties of Star-Forming Galaxies at Z~2 Dawn Erb,2005 We study the properties of star-forming galaxies at redshift z 2, an era in which a substantial fraction of the stellar mass in the universe formed. Using 114 near-IR spectra of the H-alpha and [N II] emission lines and model spectral energy distributions fit to rest-frame UV through IR photometry, we examine the galaxies' star formation properties, dynamical masses and velocity dispersions, spatially resolved kinematics, outflow properties, and metallicities as a function of stellar mass and age. While the stellar masses of the galaxies in our sample vary by a factor of 500, dynamical masses from H-alpha velocity dispersions and indirect estimates of gas masses imply that the variation of stellar mass is due as much to the evolution of the stellar population and the conversion of gas into stars as to intrinsic differences in the total masses of the galaxies. About 10% of the galaxies are apparently young starbursts with high gas fractions, caught just as they have begun to convert large amounts of gas into stars. Using the [N II]/H-alpha ratio of composite spectra to estimate the average oxygen abundance, we find a monotonic increase in metallicity with stellar mass. From the estimated gas fractions, we conclude that the observed mass-metallicity relation is primarily driven by the increase in metallicity as gas is converted to stars. The picture that emerges is of galaxies with a broad range in stellar population properties, from young galaxies with ages of a few tens of Myr, stellar masses M 10 DEGREES9 Msun, and metallicities Z 1/3 Zsun, to massive objects with M* 10 DEGREES11 Msun, Z Zsun, and ages as old as the universe allows. All, however, are rapidly star-forming, power galactic-scale outflows, and have masses in gas and stars of at least 10 DEGREES10 Msun, in keeping with their likely role as the progenitors of elliptical galaxies

The Unknown Universe Stuart Clark,2016-07-05 A groundbreaking guide to the universe and how our latest deep-space discoveries are forcing us to revisit what we know—and what we don't. On March 21, 2013, the European Space Agency released a map of the afterglow of the Big Bang. Taking in 440 sextillion kilometres of space and 13.8 billion years of time, it is physically impossible to make a better map: we will never see the early universe in more detail. On the one hand, such a view is the apotheosis of modern cosmology, on the other, it threatens to undermine almost everything we hold cosmologically sacrosanct. The map contains anomalies that challenge our understanding of the universe. It will force us to revisit what is known and what is unknown, to construct a new model of our universe. This is the first book to address what will be an epoch-defining scientific paradigm shift. Stuart Clark will ask if Newton's famous laws of gravity need to be rewritten; if dark matter and dark energy are just celestial phantoms? Can we ever know what happened before the Big Bang? What’s at the bottom of a black hole? Are there universes beyond our own? Does time exist? Are the once immutable laws of physics changing?

Galaxy Formation and Evolution Houjun Mo, Frank van den Bosch, Simon White,2010-05-20 A coherent introduction for researchers in astronomy, particle physics, and cosmology on the formation and evolution of galaxies.

The Mass of Galaxies at Low and High Redshift Ralf Bender,2003-01-23 Measuring the masses of galaxies as a function of redshift is perhaps one of the most challenging open issues in current astronomical research. The evolution of the baryonic and dark matter components of galaxies is not only a critical test of the hierarchical formation paradigm, but ultimately also provides new clues on the complex interplay between star formation, the cooling and heating of gas and galaxy merging processes. This book reviews current techniques to measure the baryonic (stellar) and dark masses of nearby galaxies, and focusses on ongoing attempts to measure these same quantities in galaxies at higher and higher redshifts. It also gives room to future perspectives, with special emphasis on new survey projects and satellite missions.

Can he restore order and find peace before a wicked veil covers Sam's material world?

Poems From A Life Less Traveled Jack Truman,

Navigating the Stars Maria V. Snyder,2018-12-01 2019 PRISM Award Winner! “The answer is no, Lyra,” my mother utters her favorite—I swear—phrase. No means I have to travel with them to another planet—again. No means leaving all my friends fifty years in the past. Thanks, Einstein. Seventeen-year-old Lyra Daniels can’t truly blame Einstein or her parents for their impending move across the Milky Way Galaxy. It’s all due to the invention of the Q-net, which made traveling the vast distances in space possible—with one big caveat: the time dilation. But that never stopped Lyra's ancestors from exploring the Milky Way, searching for resources and exoplanets to colonize. What they didn’t expect to find is life-sized terracotta Warriors buried on twenty-one different exoplanets. ... Make that twenty-two. As the Galaxy’s leading experts on the Warriors, Lyra's parents are thrilled by the new discovery, sending them—and her—fifty years into the future. Her social life in ruins, she fills her lonely days by illegally worming into the Q-net. The only person close to her age is the annoyingly irresistible security officer who threatens to throw her into the brig. After the planet they just left goes silent—meaning no communications from them at all—security has bigger problems to deal with than Lyra, especially when vital data files go missing. But that's just the beginning, because they’re not as alone as they thought on their new planet... and suddenly time isn't the only thing working against them.

Except that right now, he doesn’t know that. He can’t even remember his own name, let alone the nature of his assignment or how to complete it. All he knows is that he’s been asleep for a very, very long time. And he’s just been awakened to find himself millions of miles from home, with nothing but two corpses for company. His crewmates dead, his memories fuzzily returning, Ryland realizes that an impossible task now confronts him. Hurtling through space on this tiny ship, it’s up to him to puzzle out an impossible scientific mystery—and conquer an extinction-level threat to our species. And with the clock ticking down and the nearest human being light-years away, he’s got to do it all alone. Or does he? An irresistible interstellar adventure as only Andy Weir could deliver, *Project Hail Mary* is a tale of discovery, speculation, and survival to rival *The Martian*—while taking us to places it never dreamed of going.

Environment and the Formation of Galaxies: 30 years later Ignacio Ferreras,Anna Pasquali,2011-07-06 The publication of the morphology - density relation by Alan Dressler in 1980 brought into the limelight the role played by environment in the formation and evolution of galaxies. The symposium *Environment and the Formation of Galaxies: 30 years later*, was organised with the purpose of establishing the environmental impact on the evolution of galaxies and its dependence on look-back time. Special emphasis was placed on the physical mechanisms that are responsible for transforming galaxies once they are accreted by a group or a cluster, including the observable imprint left in the galaxy HI distribution. Other major topics of the symposium were the environmental dependence of galaxy properties at $z \geq 1$ and the implementation of environmental effects in cosmological models of galaxy formation and evolution. This book presents the edited proceedings of this stimulating meeting.
