The Business of Food Gary Allen, Ken Albala, 2007-10-30 The business of food and drink is for better and worse the business of our nation and our planet, and to most consumers how it works remains largely a mystery. This encyclopedia takes readers as consumers behind the scenes of the food and drink industries. The contributors come from a wide range of fields, and the scope of this encyclopedia is broad, covering from food companies and brands to the environment, health, science and technology, culture, finance, and more. The more than 150 essay entries also cover those issues that have been and continue to be of perennial importance. Historical context is emphasized and the focus is mainly on business in the United States. Most entries include Further Reading. The frontmatter includes an Alphabetical List of Entries and a Topical List of Entries to allow the reader to quickly find subjects of interest. Numerous cross-references in the entries and blind entries provide other search strategies. The person and subject index is another in-depth search tool. Sample entries: Advertising, Agribusiness, Altria, Animal Rights, Betty Crocker, Celebrity Chefs, Chain Restaurants,

Commodities Exchange, Cooking Technology, Culinary Tourism, Eco-terrorism, Environmental Protection Agency, Ethnic Food Business, European Union, Flavors and Fragrances, Food Safety, Food Service Industry, Genetic Engineering, Internet, Labor and Labor Unions, Marketing to Children, McDonald's, Meat Packing, North American Free Trade Agreement, Nutrition Labeling, Organic Foods, Poultry Industry, Slow Food, SPAM, Television, Trader Joe's, Tupperware, TV Dinners, Whole Foods, Williams-Sonoma, Wine Business

Food Preservation and Biodeterioration Gary S. Tucker, 2016-01-22 Biodeterioration is the breakdown of food by agents of microbiological origin, either directly or indirectly from products of their metabolism. Preservation on the other hand is the process by which food materials are maintained in their original condition or as close to this as possible. This second edition of Food Preservation and Biodeterioration is fully updated and reorganised throughout. It discusses how the agents of food biodeterioration operate and how the commercial methods available to counteract these agents are applied to produce safe and wholesome foods. With this book, readers will discover traditional

methods as well as major advances in preservation technology. Both microbiological and chemical pathways are analysed. This topic being important to all producers of food, the readership spans food scientists across industry and academia, particularly those involved with safety and quality.

Why We Get Fat Gary Taubes, 2011-12-27 NATIONAL BESTSELLER • “Taubes stands the received wisdom about diet and exercise on its head.” —The New York Times What’s making us fat? And how can we change? Building upon his critical work in *Good Calories, Bad Calories* and presenting fresh evidence for his claim, bestselling author Gary Taubes revisits these urgent questions. Featuring a new afterword with answers to frequently asked questions. Taubes reveals the bad nutritional science of the last century—none more damaging or misguided than the “calories-in, calories-out” model of why we get fat—and the good science that has been ignored. He also answers the most persistent questions: Why are some people thin and others fat? What roles do exercise and genetics play in our weight? What foods should we eat, and what foods should we avoid? Persuasive, straightforward, and practical, *Why We Get Fat* is an essential guide to nutrition and weight

management. Complete with an easy-to-follow diet. Featuring a new afterword with answers to frequently asked questions.

Essentials of Thermal Processing Gary S. Tucker, Susan Featherstone, 2011-06-09 Thermal processing remains the most important method of food preservation in use today, and the scale of the industry is immense. The large scale of these production operations makes it more important than ever that the process is performed perfectly every time: failure will lead to product deterioration and loss of sales at best, and at worst to serious illness or death. This volume is a definitive modern-day reference for all those involved in thermal processing. It covers all of the essential information regarding the preservation of food products by heat. It includes all types of food product, from those high in acid and given a mild heat process to the low-acid sterilised foods that require a full botulinum cook. Different chapters deal with the manufacturing steps from raw material microbiology, through various processing regimes, validation methods, packaging, incubation testing and spoilage incidents. The authors have extensive knowledge of heat preservation covering all parts of the world and represent organisations

with formidable reputations in this field. This book is an essential resource for all scientists and technologists in the food manufacturing industry as well as researchers and students of food science and technology.

Food Biodeterioration and Preservation Gary S. Tucker, 2008-04-30 Biodeterioration can be defined as the breakdown of food by agents of microbiological origin, either directly or from products of their metabolism. Microbiological sources can be present in foods prior to packaging or on the surfaces of packaging materials. The shelf life and safety of the food will depend on the type and quantity of microorganism, as well as the hurdles to their growth offered by various preservation techniques. This book discusses how the agents of food biodeterioration operate, and examines the commercially-used industrial methods available to control them, allowing the production of safe and wholesome foods. There is an emphasis on the equipment employed to carry out the various methods of preservation. The introductory chapter describes in detail the microorganisms and mechanisms of food breakdown intrinsic to various key food types; dairy, meat and fish, fruit, and vegetables. Direct microorganism

action will be covered in addition to enzymatic breakdown. The second chapter addresses HACCP, including food safety legislation. Subsequent chapters outline the principal, commercially-used methods of preserving foods. These chapters follow a common structure: theoretical background; flow sheets of operations; food preparation/processing equipment; special features of hygiene; packaging; shelf life; and product safety. Food Biodeterioration and Preservation is directed at food scientists and technologists in industry and academia. Since it covers all the commonly-used methods of food preservation, it will be relevant across the entire food manufacturing industry.

Packaged Pleasures Gary S. Cross, Robert N. Proctor, Robert Proctor, 2014-09-30 From the candy bar to the cigarette, records to roller coasters, a technological revolution during the last quarter of the nineteenth century precipitated a colossal shift in human consumption and sensual experience. Food, drink, and many other consumer goods came to be mass-produced, bottled, canned, condensed, and

distilled, unleashing new and intensified surges of pleasure, delight, thrill—and addiction. In *Packaged Pleasures*, Gary S. Cross and Robert N. Proctor delve into an uncharted chapter of American history, shedding new light on the origins of modern consumer culture and how technologies have transformed human sensory experience. In the space of only a few decades, junk foods, cigarettes, movies, recorded sound, and thrill rides brought about a revolution in what it means to taste, smell, see, hear, and touch. New techniques of boxing, labeling, and tubing gave consumers virtually unlimited access to pleasures they could simply unwrap and enjoy. Manufacturers generated a seemingly endless stream of sugar-filled, high-fat foods that were delicious but detrimental to health. Mechanically rolled cigarettes entered the market and quickly addicted millions. And many other packaged pleasures dulled or displaced natural and social delights. Yet many of these same new technologies also offered convenient and effective medicines, unprecedented opportunities to enjoy music and the visual arts, and more hygienic, varied, and nutritious food and drink. For better or for worse, sensation became mechanized, commercialized, and, to a large extent, democratized by being made cheap and

accessible. Cross and Proctor have delivered an ingeniously constructed history of consumerism and consumer technology that will make us all rethink some of our favorite things.

Development and Uses of Biofortified Agricultural Products Gary S. Banuelos, Zhi-Qing

Lin, 2008-10-23 Although ending world hunger remains the most important goal, increasingly the focus is on simultaneously improving world malnutrition. Paradoxically, nutritionally important trace elements essential for human health are both deficient and over-abundant in soils in many regions of the world. Using a multidisciplinary approach, *Development and Uses of Biofortified Agricultural Products* provides new strategies and techniques for the production of biofortified agricultural products from different soils. Seventeen contributors from twelve countries explore the effects of environmental and biological factors on the accumulation and speciation of nutritionally important trace elements in agricultural products. They explore novel strategies regarding the functional foods and animal feed and other forms of biofortified agricultural products. The text addresses alternative biosources and

bioproducts produced from phytoremediation processes as well as the bioavailability and the effects of bioproduct compounds. The editors comprehensively synthesize the ever-mounting body of new information on biofortification, including theoretical, practical, and practiced agricultural-based strategies in micronutrient management and improvement in different types of soils. The book provides a unique and useful platform to further the understanding of nutritionally important trace elements in the context of biogeochemistry, food chain transfer, and health-related issues.

No More Diabetes Gary Null, 2013-11-26 As Americans have grown in size, the incidence of diabetes has increased to epidemic proportions, so that what was once an uncommon disease now seems to be everywhere. According to the American Diabetes Association, 25.8 million adults and children in the United States currently suffer from diabetes—that's 8.3 percent of the population. Gary

Null teaches that we each have the power to control diabetes through nutrition and dietary regimens, exercise, mental composure, and healthy living habits. Through cutting-edge research and clear instruction, Gary Null empowers readers to take control of their health without the use of drugs. Did you know that ginseng and aloe vera help to normalize blood glucose levels? Have you considered how vaccines may be contributing to the rise in diabetes among children? No More Diabetes offers surprising information that could save your life, along with practical advice for becoming the healthiest version of yourself. In addition, readers will find tips for convincing a loved one with diabetes to take charge of his or her weight; recipes to make healthy eating fun and appealing; and input from several other experts, including Dr. Martin Feldman, a pioneer in complementary medicine, and award-winning Dr. Richard Brown, who discusses how stress contributes to diabetes.

The Forty Plus Entrepreneur: How to Start a Successful Business in Your 40's, 50's and Beyond

Gary S. Goodman,2018-10-09 At age 90 Jack Smiley wasn't thrilled with the community in which he retired, so he built his own. Today it provides him with a net income of \$40,000 each month.

Famously, KFC's 65-year-old Kentucky Colonel Harlan Sanders supplemented a paltry Social Security check by franchising his unique recipe for fried poultry. Past 50, McDonald's Ray Kroc made a similar trek in multiplying by many thousands a few popular, golden-arched hamburger stands from San Bernardino, California. Contrary to popular mythology, entrepreneurship is not spearheaded mostly by baby-faced, technology-savvy postadolescents whose brands include Facebook and Apple. According to a recent study, fully 80 percent of all businesses are started up by people over 35. Amy Groth of Business Insider cites these reasons that fortune favors the old: First, older entrepreneurs have more life and work experience. In some cases they have decades of industry expertise - and a better understanding of what it truly takes to compete and succeed,in the business world. Second, they also

have much broader and vaster networks. Even if older entrepreneurs are seeking to start businesses in entirely different industries, they have deep connections from all walks of life - for example, a brother-in-law could be the perfect COO. Third, those over 50 have acquired more wealth and better credit histories (which helps with securing loans) and are smarter with their finances. In this book from best-selling author Gary Goodman you'll discover: Supporters are everywhere: Your age cohort is the wealthiest! Now is the time to cash in your wisdom. Overcoming false beliefs and self-sabotage: why the only person holding you back is you. The Giraffe Syndrome: why the first step is the scariest. Busting age myths: Nobody will work with me at my age!, My best years are behind me, It takes money to make money, and more.
