Gasoline Quim Monzó,2010 Heribert Juliá and Humbert Herrera are opposites: the one can no longer paint, and doesn't much care, the other wants to create the sculpture to end all sculptures, the film of all films, the exhibit of all exhibitions. One couldn't care less about his mistress, the other swoops in. A fun-house mirror through which Monzó examines the creative process.

Austin,2002 Compares 3 methods of reducing gasoline consumption in the United States: setting higher Corporate Average Fuel Economy (CAFE) standards for passenger vehicles; raising the Federal tax on gasoline; and setting a limit on carbon emissions from gasoline combustion and requiring gasoline producers to hold allowances for those emissions, known as a cap-and-trade program.

Price Changes in the Gasoline Market ,1999 This report examines a recurring question about gasoline markets: why, especially in times of high price volatility, do retail gasoline prices seem to rise quickly but fall back more slowly? Do gasoline prices actually rise faster than they fall, or does this just appear to be the case because people tend to pay more attention to prices when they're rising? This question is more complex than it might appear to be initially, and it has been addressed by numerous analysts in government, academia and industry. The question is very important, because

perceived problems with retail gasoline pricing have been used in arguments for government regulation of prices. The phenomenon of prices at different market levels tending to move differently relative to each other depending on direction is known as price asymmetry. This report summarizes the previous work on gasoline price asymmetry and provides a method for testing for asymmetry in a wide variety of situations. The major finding of this paper is that there is some amount of asymmetry and pattern asymmetry, especially at the retail level, in the Midwestern states that are the focus of the analysis. Nevertheless, both the amount asymmetry and pattern asymmetry are relatively small. In addition, much of the pattern asymmetry detected in this and previous studies could be a statistical artifact caused by the time lags between price changes at different points in the gasoline distribution system. In other words, retail gasoline prices do sometimes rise faster than they fall, but this is largely a lagged market response to an upward shock in the underlying wholesale gasoline or crude oil prices, followed by a return toward the previous baseline. After consistent time lags are factored out, most apparent asymmetry disappears.

Gasoline Prices Barbara V. Urban, 2005 As major energy legislation moved to conference, the high price of gasoline remained a major consideration. The legislative proposals of past Congresses have contained numerous provisions that would affect gasoline supply and demand. This is true also of the Energy Policy Act of 2005, H.R. 6, both the version passed by the House April 21, and the Senate bill, passed June 28. A large number of factors combined to put pressure on gasoline prices, including increased world demand for crude oil and US refinery capacity inadequate to supply gasoline to a recovering national economy. The war and continued violence in Iraq added uncertainty and a threat of supply disruption that added pressure particularly to the commodity futures markets. Numerous provisions in legislative proposals in the 108th Congress addressed perceived problems in the oil and gasoline markets. A comprehensive energy policy bill was reported out of conference and approved by the House, but several

issues kept the bill from passing the Senate. Among the most controversial were provisions regarding the use of ethanol and the additive methyl tertiary butyl ether (MTBE) in motor fuel, proposals to open up part of the Arctic National Wildlife Refuge (ANWR) to oil and gas development, measures concerning corporate average fuel economy (CAFE) standards, and proposals to aid construction of new refineries and to harmonise state boutique fuels standards. In the 109th Congress, the House passed a comprehensive bill, H.R. 6, with many of the same provisions of the bill considered in the previous Congress. As before, MTBE and ANWR, included in the House-passed bill, remain controversial. The House bill added another controversial provision, giving the Federal Energy Regulatory Commission (FERC) overriding authority over state entities in licensing terminals to receive and process liquefied natural gas. In the Senate version of H.R. 6, the MTBE safe harbour provision has been omitted. The Senate bill contains a provision, not in the House-passed version, directing the President to take measures to reduce total demand for petroleum by one million barrels per day (mbd) by 2015. An amendment by Senator Cantwell, which would have set the goal of reducing petroleum imports by 40% by 2025, was defeated on the floor by a vote of 47-53. The gasoline price surge heightened discussion of energy policy, but the urgency of previous energy crises has been lacking. In part this may be due to the fact that there has been no physical shortage of gasoline, and no lines at the pump. In addition, the expectation of former crises, that prices were destined to grow ever higher, has not been prevalent. However, the persistence of high gasoline and oil prices into a second summer has raised alarms over the economic consequences of the situation.

How Is Gasoline Made and Sold? Derek Miller, 2019-12-15 Four thousand years ago, people began collecting crude oil that bubbled up through the earth to make roads and buildings. Today, people refine crude oil for many purposes, not least of all to harness its energy to power modern transportation. This book takes readers through the process of extracting, refining, and selling gasoline and diesel, while discussing how these processes are affected by globalization. It also describes complex ideas like oil reserves, supply and demand, and environmental impacts in an easy-to-follow and engaging way.
