Energize Education through Open Source Christopher Whittum, M.Ed.,2013-11 For many schools in today's economy, money is tight, and costs must be closely monitored. With this in mind, there is one area where educators can save: free, open source software. In Energize Education through Open Source, Christopher D. Whittum explains the ins and outs of a huge repository of educational and productivity software that is available and open source. Filled with practical examples, this guide shares how this software and hardware can be obtained, provides suggestions for integrating it, and shows how schools can find the options that work best for their students and teachers. Whittum, who has worked with computers for more than thirty years, addresses and explains the Linux operating system, discusses how the open source products can be integrated into existing curricula, and provides suggestions for applications that could serve as aids to learning. Energize Education Through Open Source provides a feasible technology solution for schools facing financial barriers.

Cognitive Computing in Technology-Enhanced Learning Lytras, Miltiadis D.,Aljohani, Naif,Daniela, Linda,Visvizi, Anna,2019-05-31 Various technologies and applications such as cognitive computing, artificial intelligence, and learning analytics have received increased attention in recent years. The growing demand behind their adoption and exploitation in different application contexts has captured the attention of learning technology specialists, computer engineers, and business researchers who are attempting to decipher the phenomenon of personalized e-learning, its relation to already conducted research, and its implications for new research opportunities that effect innovations in teaching. Cognitive

Computing in Technology-Enhanced Learning is a critical resource publication that aims to demonstrate state-of-the-art approaches of advanced data mining systems in e-learning, such as MOOCs and other innovative technologies, to improve learning analytics, as well as to show how new and advanced user interaction designs, educational models, and adoptive strategies can expand sustainability in applied learning technologies. Highlighting a range of topics such as augmented reality, ethics, and online learning environments, this book is ideal for educators, instructional designers, higher education faculty, school administrators, academicians, researchers, and students.

Réseaux socionumériques et médiations humaines : Le social est-il soluble dans le web ? ROJAS Estrella,2013-10-01 Le développement massif des pratiques d'agir avec et de vivre ensemble, instrumentées par les réseaux socionumériques, ainsi que l'usage abondant de l'expression « web social » et de ses dérivés peuvent être vus comme les indices d'une nouvelle étape de l'industrialisation numérique de la culture et du symbolique qui s'empare désormais du social. Afin d'en préciser les effets et les dynamiques, l'ouvrage propose une approche du social comme un construit en mouvement fait d'associations entre êtres (humains, techniques, symboliques, etc.). Il analyse les dispositifs socionumériques en tant que « machines d'écritures », puis il se penche sur des collectifs mus par des buts communs et articulés par des plateformes dédiées. En mettant ainsi en tension l'analyse des dispositifs et celle des pratiques, ce livre collectif dresse un tableau contrasté de la pharmacologie numérique du vivre ensemble.

    Emerging Technological Risk Stuart Anderson,Massimo Felici,2012-01-05 Classes of socio-technical hazards allow a characterization of the risk in technology innovation and clarify the mechanisms underpinning emergent technological risk. Emerging Technological Risk provides an interdisciplinary account of risk in socio-technical systems including hazards which highlight: · How technological risk crosses organizational boundaries, · How technological trajectories and evolution develop from resolving tensions emerging between social aspects of organisations and technologies and · How social behaviour shapes, and is shaped by, technology. Addressing an audience from a range of academic and professional backgrounds, Emerging Technological Risk is a key source for those who wish to benefit from a detail and methodical exposure to multiple perspectives on technological risk. By providing a synthesis of recent work on risk that captures the complex mechanisms that characterize the emergence of risk in technology innovation, Emerging Technological Risk bridges contributions from many disciplines in order to sustain a fruitful debate. Emerging Technological Risk is one of a series of books developed by the Dependability Interdisciplinary Research Collaboration funded by the UK Engineering and Physical Sciences Research Council.

    Leveraging Knowledge for Innovation in Collaborative Networks Luis M. Camarinha-Matos,Iraklis Paraskakis,Hamideh Afsarmanesh,2009-09-21 Collaborative Networks A Tool for Promoting Co-creation and Innovation The collaborative networks paradigm offers

powerful socio-organizational mec- nisms, supported by advanced information and communication technologies for p- moting innovation. This, in turn, leads to new products and services, growth of better customer relationships, establishing better project and process management, and building higher-performing consortia. By putting diverse entities that bring different perspectives, competencies, practices, and cultures, to work together, collaborative networks develop the right environment for the emergence of new ideas and more efficient, yet practical, solutions. This aspect is particularly important for small and medium enterprises which typically lack critical mass and can greatly benefit from participation in co-innovation networks. However, larger organizations also benefit from the challenges and the diversity found in collaborative ecosystems. In terms of research, in addition to the trend identified in previous years toward a sounder consolidation of the theoretical foundation in this discipline, there is now a direction of developments more focused on modeling and reasoning about new c- laboration patterns and their contribution to value creation. "Soft issues," including social capital, cultural aspects, ethics and value systems, trust, emotions, behavior, etc. continue to deserve particular attention in terms of modeling and reasoning. Exploi- tion of new application domains such as health care, education, and active aging for retired professionals also help identify new research challenges, both in terms of m- eling and ICT support development.
